Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or an experienced radio technician for help.

FCC Caution

To assure continued compliance, use only shielded interface cables when connecting to computer or peripheral devices. Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Federal Communication Commission (FCC) Radiation Exposure Statement

This equipment complies with FCC radiation exposure set forth for an uncontrolled environment. In order to avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna shall not be less than 20 cm (8 inches) during normal operation.

Safety

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines of this and of the computer manufacture must therefore be allowed at all times to ensure the safe use of the equipment.

CE Mark Warning

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

WEEE Regulation

To avoid the potential effects on the environment and human health as a result of the presence of hazardous substances in electrical and electronic equipment, end users of electrical and electronic equipment should understand the meaning of the crossed-out wheeled bin symbol. Do not dispose of WEEE as unsorted municipal waste and have to collect such WEEE separately.

Chapter 1. Product Introduction

1.1 Package Contents

The package should contain the following:

- 1 x Switched IPM
- 1 x Quick Installation Guide
- 1 x Power cord
- 1 x Quick Rack-mounting Kit Installation Guide (For IPM-8220)

If any of the above items are missing, please contact your seller immediately.

1.2 Overview

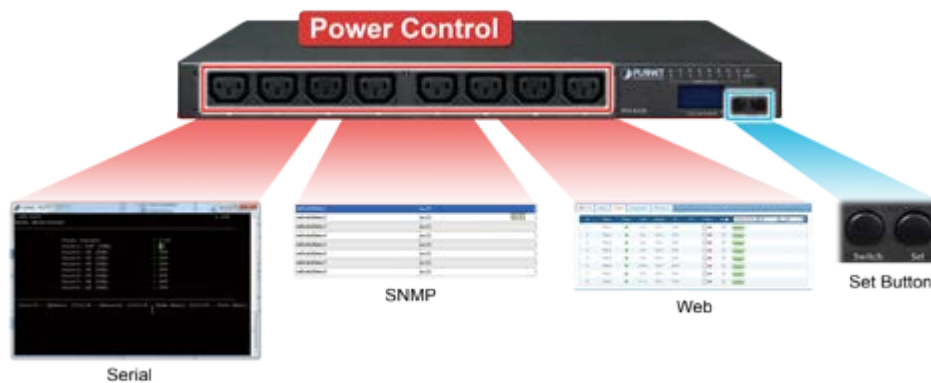

Meeting All Your Power Needs via IP-based Power Outlets

PLANET IPM-4220/8220 is a 4-/8-port IP Power Management (IPM) device that provides the useful function of managing power for any combination to connect with itself. With the innovative IP-based technology, PLANET has made the traditional power management equipment into true networking devices.

Intelligent Power Management

The IPM-4220/8220 offers 4/8 power outlets, each of which can be controlled or monitored individually by the console or SNMP manager software or web interfaces. They allow users to access, configure, and manage many networking devices at the same time from remote locations to save valuable time.

Electric Current Monitored on Display

The aggregate current draw per rack PDU is displayed on the unit via a digital display. The local digital display helps installers avoid overloaded circuits by providing a visible warning when the current draw is close to the maximum amperage draw of the strip.

Scheduled Power On/Off

The IP-based Switched Power Manager allows you to pre-define a power schedule for IT equipment. It alerts users to an upcoming shutdown, and then waits a predefined amount of time to allow users to finish their work and sign off.

Overload Protection

Securing you against the risk of getting the entire circuit cut off, commonly happened with ordinary power distribution units (PDUs), when there is overloaded power, PLANET PDU, with a built-in circuit breaker and reset switch, ensures the stability of power distribution among its equipment. Its 16-amp circuit breaker prevents dangerous circuit overloads that could damage the equipment.

Energy and Cost Saving

You can also check the current energy consumption in your office within the configuration interface of the IPM-4220/8220. It helps you reduce energy consumption, thus saving expenses on utilities.

1.3 Features

➤ Hardware

- Desktop/1U rack-mount size design
- IEC outlet models
- 4/8 power outlets that support real-time current image monitoring
- 4/8 LEDs show power status for each power outlet
- LCD panel displays current, maximum alarm and network information
- Switch/Set button to lock up protection to avoid modification (For IPM-8220)
- Buzzer will ring when total power consumption value exceeds set value
- Circuit breaker can avoid damage that is caused by overload
- Versatile sensors supported through environmental sensor box (ESB) inputs

➤ Power Distribution

- Maximum Amps/Inlet: IEC 16A for 1 inlet
- Maximum Amps for 4/8 Outlets: IEC 16A for 4/8 outlets
- Full Frequency Range: 50~60Hz
- Supports multiple power control methods – Wake on LAN, System After AC Back, Kill the Power

➤ Remote Access

- Remote power control via TCP/IP and a built-in 10/100Mbps Ethernet port
- Multi browsers support (IE, Google, Firefox, Safari, Opera, Netscape)

➤ Management

- Provides Install Wizard to ease users' setting of parameters
- Events notification by sending pop-up message, trap, SMS or e-mail
- Supports Management Information Base (MIB) files for SNMP
- Naming support for outlets
- Power-on sequencing intelligently turns on/off devices based on event occurrence or planned schedule
- Voltage, current, wattage and total kWh report
- Sets over-current watchdog for power outlet
- External UPS can be installed for a possible power outage

➤ **Security**

- Web page supports 1024-bit SSL security encryption transmission
- Supports Secure Socket Layer V3 and Secure Shell V1 protocols
- Administrator and multiple users with password protection for double-layer security
- IP Filtering -- Address-specific IP security masks to prevent unauthorized access

1.4 Specifications

Product	IP-based 4/8-port Switched Power Manager	
Hardware Specifications		
	IPM-4220	IPM-8220
Outlet Power Port	4	8
Inlet Power Port	1	
Sensor Port	1 RJ11-type port, 6P	
Com Port	2 RJ45-type ports	
Network Connector	1 RJ45 port for 10/100BASE-TX	
Button	1 switch/set button 1 reset button	1 switch button 1 set button 1 reset button
LED	1 IP LED 1 alarm LED 1 system LED 1 reset and warning LED 4 outlet status LEDs	1 alarm LED 1 system LED 1 reset and warning LED 8 outlet status LEDs
LCD Panel	Displays total current and IP	Displays total current, max. alarm, voltage and IP
Housing	Metal	
Dimensions (W x D x H)	332 x 153 x 44 mm	432 x 153 x 44 mm
Weight	1.6kg	2.5kg
Installation	Desktop	1U rack-mountable, desktop
Buzzer	1	
Breaker	1 x 16A	
Power Distribution		
	Inlet Power	Outlet Power
Voltage	100~240V	
Frequency	50~60Hz	
Connection	1 x IEC320 C20	4/8 x IEC320 C13
Maximum Current	16A	
Maximum Line Current	-	10A

Management	
User Account	General/Manage/Administrator
Management Utility	Web browser, SNMP software, Windows-based utility, Telnet
Security	IP filter/MAC filter/Secure 128-bit SSL encryption
Standards Conformance	
Computer Interface	IEEE 802.3 10BASE-T IEEE 802.3u 10/100BASE-TX
Regulatory Compliance	CE, FCC
Environments	
Operating Temperature	0 ~ 60 degrees C
Operating Humidity	0 ~ 90%
Operating Altitude	0-4500 meters

Chapter 2. Hardware Interface

2.1 Physical Descriptions

IPM-4220 Rear Panel

IPM-4220 Front Panel

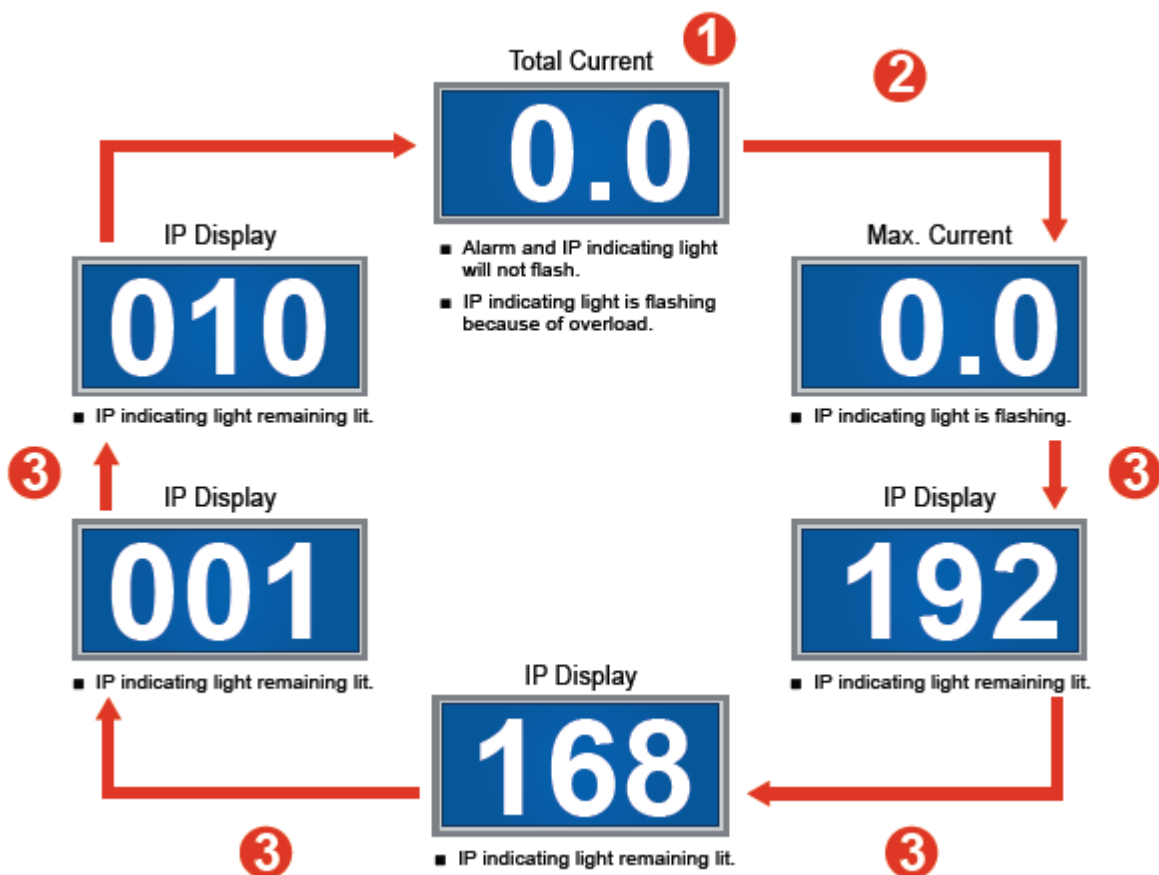

1	System Indicating Light Slow flashing: Normal operating Rapid flashing: Normal updating
2	Reset and Warning Indicating Light
3	Temperature/Humidity Port for IPM-ESB Connection
4	Reset Button
5	RJ45 Ethernet Port
6	USB Connected Port (Future Feature)
7	COM2/1 2 Com Ports provided to enable terminal control, API control and 2 mutual cascading
8	Circuit Breaker Protection
9	Power Inlet
10	Power On/Off Switch

11	Power Outlet Note: The maximum output current is 16 amps.
12	LCD Panel: To display total current and IP
13	Switch/Set button Provide LCD panel in order to switch the total current and IP; set alarm current
14	IP Indicating Light Lights remaining lit: IP displaying
15	Alarm Indicating Light Lights remaining lit: Alarm has occurred Slow flashing: There is current overloading
16	Buzzering
17	Power Outlet Indicating Light

IPM-4220 Panel Operation

The first mode of LCD is total current, switching with the **Switch/Set button** to show the regular sequence of total current, maximum current and IP shown below:

- **1** LCD menu shows the total current. → Hold the **Switch/Set button** for 3 seconds (until a **long beep** is heard) to enter alarm current setting. → Press the **Switch/Set button** to increase the alarm current by **0.5A** in each press. → Hold the **Switch/Set button** for **3** seconds (until a “beep” is heard) to save the setting.
- **2** Press the **Switch/Set button** until it shows the maximum current. → Hold the **Switch/Set button** for **3** seconds (until a **long beep** is heard) to adjust to a **zero** point.
- **3** Press the **Switch/Set button** to switch the display of each IP address.

IPM-8220 Rear Panel

IPM-8220 Front Panel

8	Circuit Breaker Protection
9	Power Inlet
10	Power Outlet Note: The maximum output current is 16 amps.
11	LCD Panel: To display total current, branch 1, branch 2, voltage and IP
12	Switch Button Provide LCD panel in order to switch the total current, power switch control and IP
13	Set Button Provide LCD panel in order to switch the total current, branch current, voltage, power switch current,

	power switch control and IP; set alarm current
14	Buzzer
	Alarm Indicating Light
15	Lights remaining lit: Alarm has occurred Slow flashing: There is current overloading
16	Power Outlet Indicating Light

IPM-8220 Current Panel Operation

When the LCD panel only displays figures and the sign of "**A (AMP)**", it means total current. Switch with the **Set button** to show the following sequence:

- 1** LCD menu shows total current and current values of branch 1 and branch 2. → Hold the **Set button** for **3 seconds** (until a **long beep** is heard) to enter alarm current setting. → Enter **flash mode** (LCD will flash after entering setting mode; "**S**" and "**W**" will display at the bottom of LCD). → Press the **Set button** to increase the alarm current by **0.5A** in each press. → Hold the **Set button** for **3 seconds** (until a "**beep**" is heard) to save the setting.

- **2** Press the **Set button** to show the **voltage** information.
- **3** Press the **Set button** to show the maximum current record of all branches (branch 1 and branch 2). → Hold the **Set button** for **3 seconds** (until a **long beep** is heard) to adjust to a zero point.

IPM-8220 Power Outlet Panel Operation

When the LCD panel shows figures and "0", the information shown is the **branch circuit power outlet**. By clicking the **Set button**, the following information will be displayed in sequence:

- **1** Press the **Switch button** to **Port 1~8** mode.
- **2** Press the **Set button** to show power outlet current. → Hold the **Set button** for **3 seconds** (until a **long beep** is heard) to enter power outlet alarm current setting. → Enter **flash mode** (LCD will flash after entering setting mode; "S", "O" and "W" will display at the bottom of LCD). → Press the **Set button** to increase the alarm current by **0.5A** in each press. → Hold the **Set button** for **3 seconds** (until a "beep" is heard) to save the setting.
- **3** Press the **Set button** to show "maximal power outlet current record", → Hold the **Set button** for **3 seconds** (until a **long beep** is heard) to adjust to a zero point.
- **4** Hold the **Switch button** for **3 seconds** (until a **long beep** is heard) in **Port 1~8** mode. → Enter Power On/Off mode ("L" will be added in front of the original line number). → Double-click the Set button to switch between power on and off.

- When LCD panel displays " **Port 1~8** mode". → Hold the **Switch button** for **3 seconds** (until a **long beep** is heard) till "**LOC**" displayed. It means this circuit power is locked and cannot be

operated through the panel. Please go to the **Peripheral** of web UI and check the setting.

IPM-8220 IP Panel Operation

Press the **Switch button** to show words like "IP" → Press the **Set button** to switch the display of each IP address. IP can only be set by the web page rather than the LCD panel.

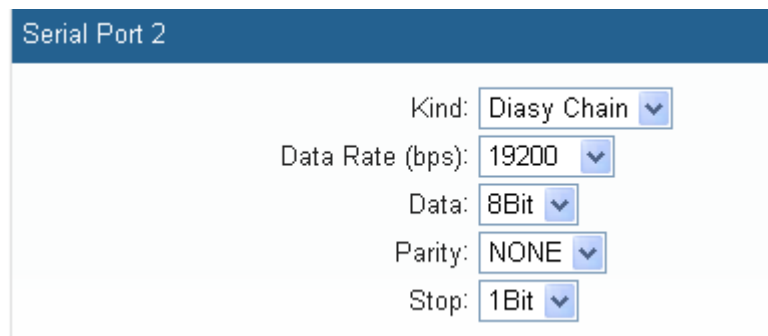

2.2 Product Concatenation

If the controlled device and server have the function of redundant power, then shut-down of the device requires power-off of both two power supplies. Therefore, product concatenation is provided to reach the goal of power-on/off at the same time as two power supplies.

1. For concatenation of the two Switched IPM, please pay attention to the following notices:

2. For the main power supply control of the Switched IPM, set the UART type as daisy chain.

Serial Port 2

Kind:

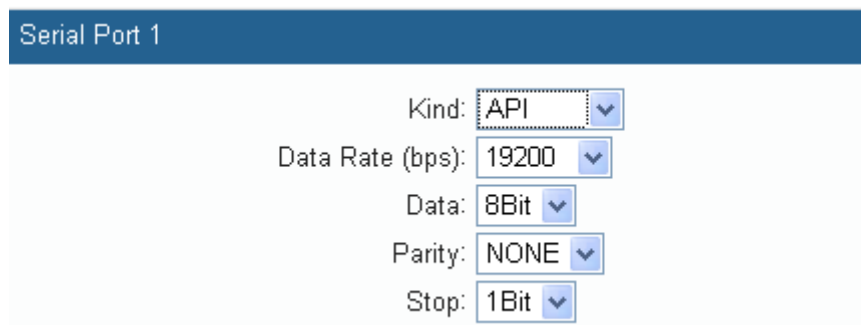

Data Rate (bps):

Data:

Parity:

Stop:

3. For the secondary power supply control of the Switched IPM, set the UART type as API. The power outlet of the main and secondary remote power control devices can be set to determine the power outlet requiring concatenation.

Serial Port 1

Kind:

Data Rate (bps):

Data:

Parity:

Stop:

2.3 Installation Precautions

- Please set the maximum power-off protection allowed by power circuit as per the rated current information indicated on the device with reference to the local state rules, safety procedures and disconnection or deviation.
- The unit can only be connected to a grounded power outlet or system.
- Make sure the total current output of all the connected systems is within the rated current indicated on the device.
- The test results of this device may be inaccurate giving unstable power supply.
- Avoid using this device in places near water or moisture environments.

In order to avoid a fire hazard or risk of electric shock, do not expose the product to rain or moisture.

- Use the attachments/accessories specified by the manufacturer only.
- Please avoid any items or liquids entering the device because their contact with dangerous voltage points or short-circuit parts may cause a fire or electric shock.

2.4 Hardware Installation

The IPM-8220 provides a standard 19-inch rack for the installation of devices. Please use the rack installation accessories attached with the product package (standard accessory for the IPM-8220). First install the accessories to the device and then the device to the rack.

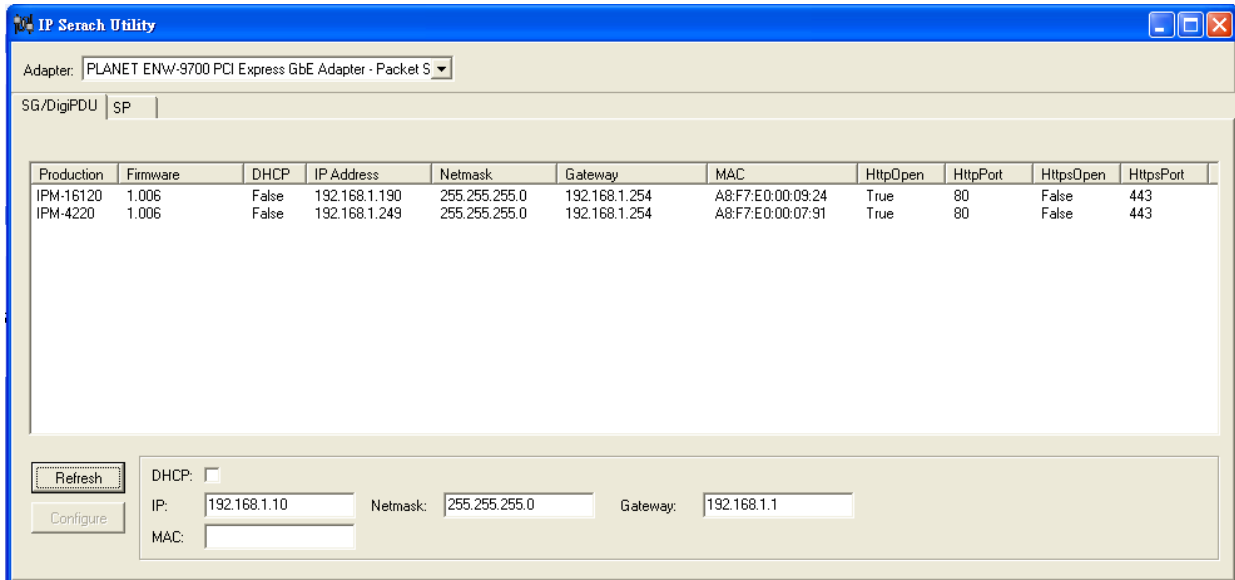

Please make sure all the units connected are powered off before the installation of the device and take other necessary precautions during the installation.

2.5 Initial Utility Installation

PLANET “IP Search” is a software utility used to search the IP Metered PDU product on a network quickly and with ease.

Step 1: Please download the **IP Search** tool from [PLANET Download Center](#).

Step 2: Please press the “Refresh” button to find out your IP Metered PDU.

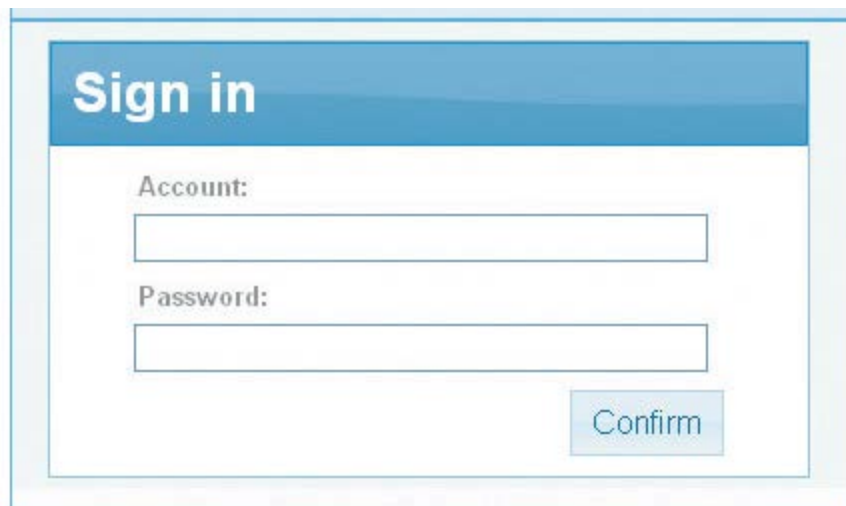

1. Before searching the IP, please make sure your PC is in the same IP segment as control gateway.

2. Do not set double IP addresses on the same LAN card.

Step 3: Enter the IP address and log in to the homepage of IPM.

Chapter 3. Quick Setup

In this section users can learn how to query device IP and how to set language, account password, network and time zone through daemon.

3.1 Network Connection

After the device is connected to the network, IP can be acquired automatically through DHCP server (The device IP will be preset to **192.168.0.10** if there is no DHCP server.). The acquired IP can be displayed on the LCD panel or device IP can be searched by IP Search Utility.

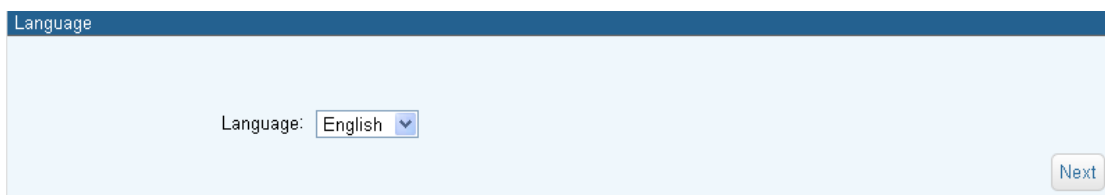

Default DHCP Client	On
Default IP Address	192.168.0.10 – if no DHCP existed in the network
Default Port	80
Default Login User Name	Set itself
Default Login Password	Set itself
Search Tools	ip_search

3.2 Setup Wizard

When you use the Switched IPM for the first time, after it is connected to the Internet, browser would pop up Setup Wizard asking you to provide language, account, password, network and time zone.

Step 1: Language Selection

Select your language currently available in English, Traditional Chinese and Simplified Chinese, and press **Next** to continue.

Step 2: Account Setting

This menu is for setting the admin account and password of the device. Press **Next** to continue.

Account Setting

Account:

Enter Password:

Confirm Password:

Step 3: Host Setting

The product is assigned dynamically (DHCP). To specify a fixed IP address, please fill in IP Address, Subnet Mask and Gateway. Press **Next** to continue.

Host Settings

Enabled DHCP:

Host:

Subnet Mask:

Gateway:

Step 4: DNS Setting

Key in the DNS server, provided by ISP providers, and then you can set up two DNS servers. Press **Next** to continue.

Domain Name Server

Primary DNS Server:

Secondary DNS Server:

Step 5: Web Server

Https can help protect streaming data transmission over the internal on the higher security level. You can select the connection type. "Https" means user cannot connect the camera via Http protocol. The Https path will be: "https://(IP address)/". If you select "Http & Https", both the Http and Https path can be used to access the device. Press **Next** to continue.

Web Server

Enabled HTTP:

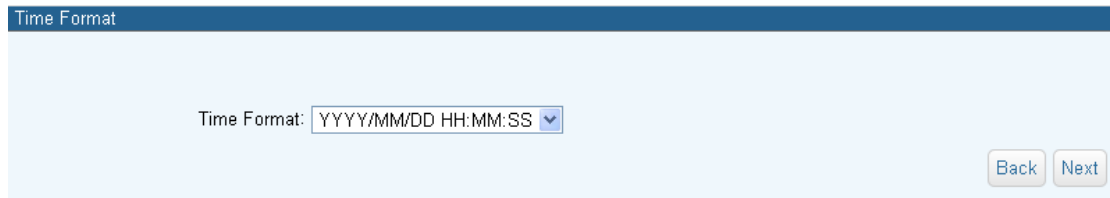

Enabled HTTPS:

Http Port:

Https Port:

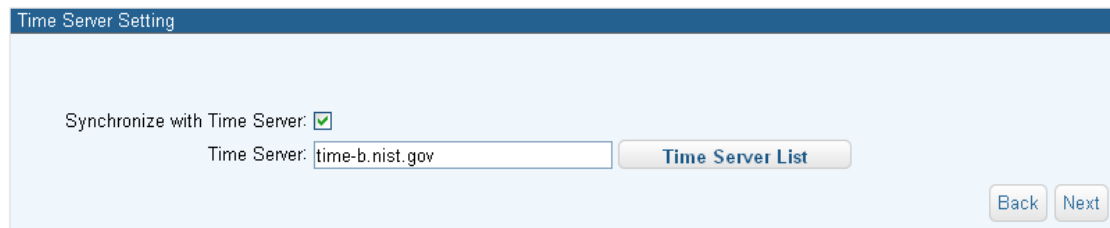

Step 6: Time Format

Select the time format to show in the system. Press **Next** to continue.

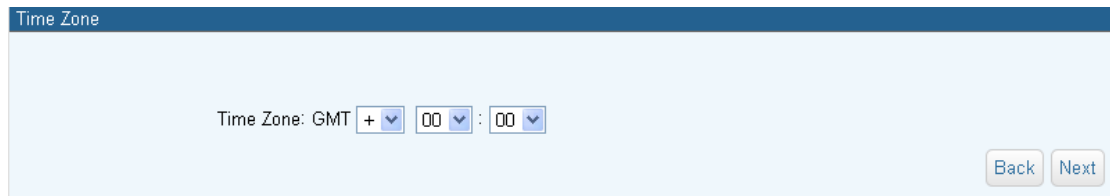

Step 7: Time Server Setting

User can set up device time synchronized with Time Server. Press **Next** to continue.

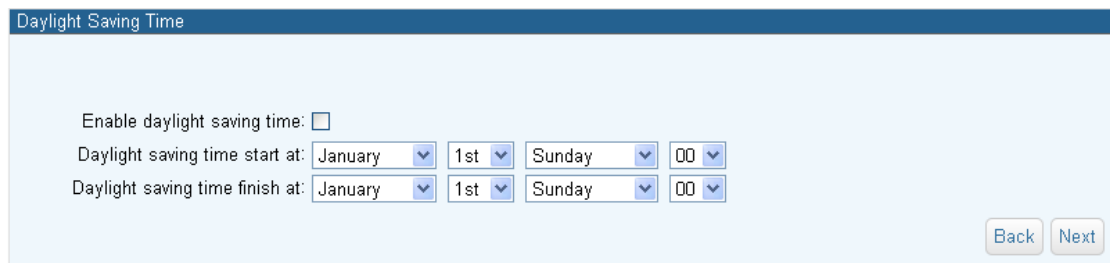

Step 8: Time zone

Please fill in the time zone where the device is. The system is based on Greenwich Mean Time, and thus, an accuracy setting to time zone may affect the time record of events and chart. Press **Next** to continue.

Step 9: Daylight Saving Time

Set the Daylight saving time from Sunday to Saturday. Press **Next** to continue.

Step 10: General Setting

You may set up operational overtime in this section. Press **Finish** to save all settings.

General Setting

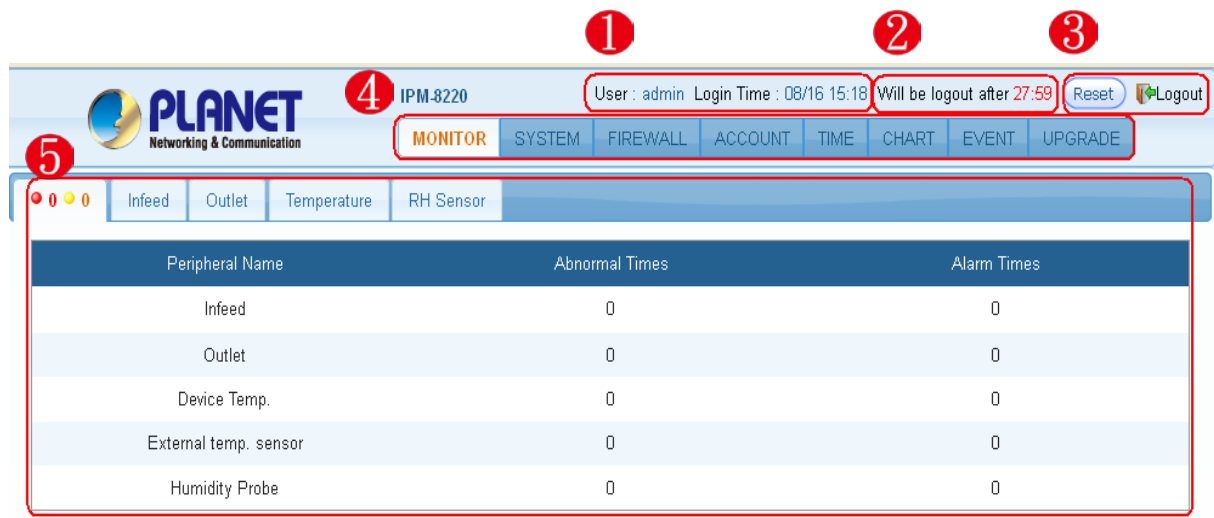

'System' Timeout: Min.

Chapter 4. Web-based Management

This section provides instructions about how to use the web interface to configure and control the IP Power Manager remotely.

4.1 Monitor

After a successful login, the web page will display the following operation menu where each part is illustrated below:

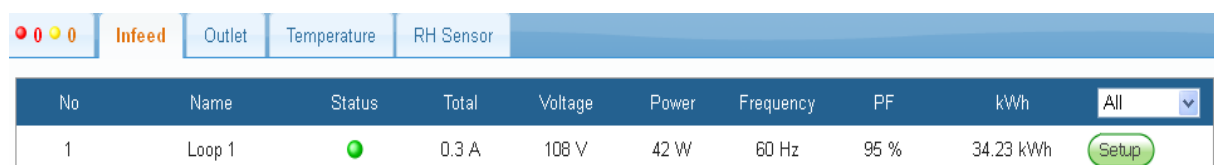

The screenshot shows the web interface for IPM-8220. At the top, there is a header with the PLANET logo and 'IPM-8220'. To the right of the header, there is a user login area showing 'User: admin Login Time: 08/16 15:18' and 'Will be logout after 27:59'. Below this are 'Reset' and 'Logout' buttons. A navigation bar contains tabs for 'MONITOR', 'SYSTEM', 'FIREWALL', 'ACCOUNT', 'TIME', 'CHART', 'EVENT', and 'UPGRADE'. The 'MONITOR' tab is selected. Below the navigation bar, there are sub-tabs for 'Infeed', 'Outlet', 'Temperature', and 'RH Sensor'. The 'Infeed' sub-tab is active. The main content area displays a table with columns for 'Peripheral Name', 'Abnormal Times', and 'Alarm Times'. The table lists five peripherals: Infeed, Outlet, Device Temp., External temp. sensor, and Humidity Probe, all with 0 abnormal and alarm times.

1	User login information
2	Reset the logout time
3	System logout
4	Function bar
5	Operation block

4.1.1 Infeed

Display the current, voltage, power, frequency, power factor, watts and such information.

The screenshot shows the 'Infeed' monitoring page. At the top, there are sub-tabs for 'Infeed', 'Outlet', 'Temperature', and 'RH Sensor'. The 'Infeed' sub-tab is active. Below the sub-tabs, there is a table with the following columns: No, Name, Status, Total, Voltage, Power, Frequency, PF, kWh, and a dropdown menu set to 'All'. The table contains one row with the following data: No: 1, Name: Loop 1, Status: (green dot), Total: 0.3 A, Voltage: 108 V, Power: 42 W, Frequency: 60 Hz, PF: 95 %, kWh: 34.23 kWh. There is a 'Setup' button next to the kWh value.

Parameters	Description								
Name	Description of each power infeed.								
Status	<p>Each light signal has three states: "Normal", "Alert" and "No Access".</p> <p> Monitor Normal: "Offline Monitor" is checked. And external temperature is not higher than "High Alarm" or lower than "Low Alarm" setting.</p> <p> Monitor Alert: "Offline Monitor" is checked. And external temperature is higher than "High Alarm" or lower than "Low Alarm" setting.</p> <p> No Access: Means user does not have any authority to operate the infeed.</p> <p>Move the mouse over the signal light for its detailed information, and the menu is displayed as follows:</p> <div style="border: 1px solid black; padding: 5px; margin: 10px auto; width: fit-content;"> <table style="background-color: #f0f0f0; border-collapse: collapse;"> <tr> <td style="background-color: #e67e22; color: white; padding: 5px;">Status</td> <td style="padding: 5px;">Normal</td> </tr> <tr> <td style="background-color: #e67e22; color: white; padding: 5px;">Overload</td> <td style="padding: 5px;">15 A</td> </tr> <tr> <td style="background-color: #e67e22; color: white; padding: 5px;">High Alarm</td> <td style="padding: 5px;">12 A</td> </tr> <tr> <td style="background-color: #e67e22; color: white; padding: 5px;">Low Alarm</td> <td style="padding: 5px;">0 A</td> </tr> </table> </div>	Status	Normal	Overload	15 A	High Alarm	12 A	Low Alarm	0 A
Status	Normal								
Overload	15 A								
High Alarm	12 A								
Low Alarm	0 A								
Total	Display the total current consumption of the device.								
Voltage	Display the voltage of the current input power.								
Power	Display the consumption power value of the current input power.								
Frequency	Display the voltage frequency of current input power.								
Power factor	Display the power factor of current input power.								
KWh	Display the consumption watt-hour of the device since the last zeroing.								
State dropdown menu	It provides four methods for users to check up infeed status: All, abnormal, warning and normal. Relevant info would show as correspondence event has been chosen.								
Setup	Press "Setup" and the window for setting the input power of this circuit will be shown.								

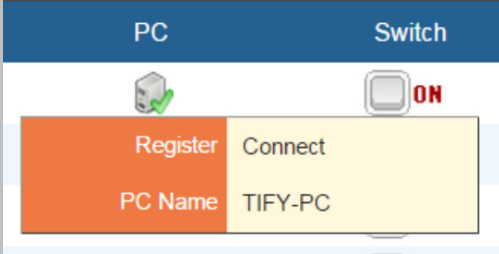

Parameters	Description
	<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> Name : <input type="text" value="Loop 1"/> Overload : <input type="text" value="16.0"/> A Max: 16 A High Alarm : <input type="text" value="12.8"/> A Max: 16 A Low Alarm : <input type="text" value="0.0"/> A Max: 16 A Voltage : <input type="text" value="0"/> V </div> <p>Name: Description of each power infeed.</p> <p>Overload Current: Input the current value of the overload power; alarms will be given when the input power current exceeds this alarm value.</p> <p>High Alarm: Set up the values of high infeed alarm. When current is higher than you set, the alarm will occur.</p> <p>Low Alarm: Set up the values of low infeed alarm. When current is lower than you set, the alarm will occur.</p> <p>Voltage: Set the input power voltage, and when the device has no watt-hour module, this value will be taken as computing power and relevant information.</p>

4.1.2 Outlet (For IPM-4220)

Display PC connected with device statement and switch info; power on/off can be directly operated on the menu.

● ● ● ● 1

Parameters	Description
Name	If user has no access to this route after signing in, then the name will be "No Access".
Status	Power outlet current has three states: "Normal", "Alert" and "No Access".

Parameters	Description								
	<ul style="list-style-type: none"> ● Normal: “Offline Monitor” is checked. And external temperature is not higher than “High Alarm” or lower than “Low Alarm” setting. ● Alert: “Offline Monitor” is checked. And external temperature is higher than “High Alarm” or lower than “Low Alarm” setting. ● No Access: Means user does not have any authority to operate the infeed. <p>Move the mouse over the signal light for its detailed information, and the menu is displayed as follows:</p> <table border="1" style="margin-left: auto; margin-right: auto; border-collapse: collapse;"> <tr> <td style="background-color: #f4a460; color: white;">Status</td> <td style="background-color: #fff9c4;">Normal</td> </tr> <tr> <td style="background-color: #f4a460; color: white;">Overload</td> <td style="background-color: #fff9c4;">14 A</td> </tr> <tr> <td style="background-color: #f4a460; color: white;">High Alarm</td> <td style="background-color: #fff9c4;">12.0 A</td> </tr> <tr> <td style="background-color: #f4a460; color: white;">Low Alarm</td> <td style="background-color: #fff9c4;">0 A</td> </tr> </table>	Status	Normal	Overload	14 A	High Alarm	12.0 A	Low Alarm	0 A
Status	Normal								
Overload	14 A								
High Alarm	12.0 A								
Low Alarm	0 A								
Load	Display the current consumption of the power outlet.								
Voltage	Display the voltage of the power outlet.								
VA	Display the consumption power value of the current power outlet.								
PC	<p>When the power outlet connects with a computer, in order to allow the computer to shut down normally before powering off, the computer must be installed and execute a safe shutdown program (Please go to PLANET website to download this program). After relevant parameters are set, safe shutdown program will be registered on the computer and the computer state will show the sign of  giving normal registration. There are two computer states for power outlet: "Normal online state", and "Abnormal online state".</p> <p>: Normal online state</p> <p>: Abnormal online state</p> <p>Move the mouse over the sign for its detailed information, and the menu is displayed as follows:</p>								

Parameters	Description
	
Switch	Displays the current power outlet on-off state. For operation of power outlet on/off, click the on/off icon with the mouse for commands of "On", "Off", and "Reboot".
Sync Port	To be displayed after concatenation is enabled is the power outlet of this line that will be linked with the outlet displayed in the Sync Port of concatenated device.
All	To operate many switched IPM at once, please follow these steps: Step 1. Mark on the checkbox of switches or All that you want to operate. Step 2. Select the action you want (ON, OFF, REBOOT or SHORT ON). Step 3. Click Confirm to control the switch you select.
Setup	Press Setup and the following window will appear, and users can set the outlet power, safe shutdown, work schedule, auto-ping, monitoring, parameter and copy. Please refer to the 4.2 Outlet Power Setup for more understanding.
Group Management	You may Add, Delete, Modify the group and also assign them with special switch. Descriptions are shown below: Select: You may select existing groups for deletion and revision from the drop-down list. Delete Group: Delete the group user that is not necessary. Add Group: Press Add Group to create a group. After clicking it, Add Group window will pop up. Enter group name and mark the ports you expect to manage, and press Add to build the group, continuously adding is permitted here. Press Cancel to return to main tab.

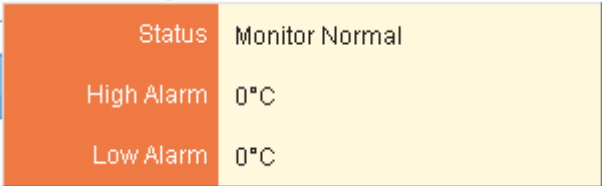

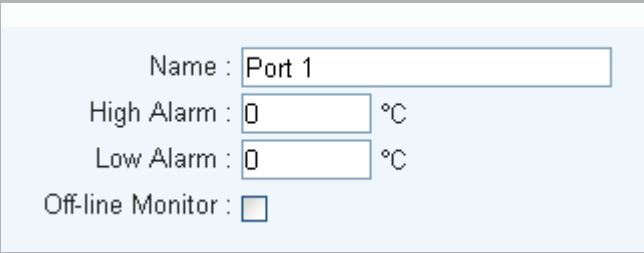

Parameters	Description
	

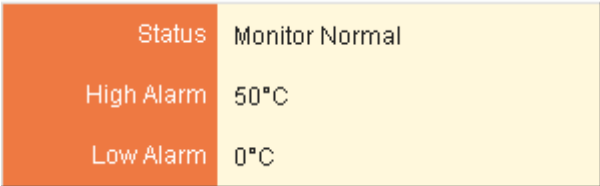

4.1.4 Temperature

Display the information of Offline Monitor, Status and Temperature Value of the sensor.

● 1 ● 1 ● 1 Infeed Outlet Temperature RH Sensor Daisy Chain						
Model: Temp & RH Sensor				Device Temp: 47.5°C ● Setup		
External Port	Name	Off-line Monitor	Status	Temp	All v	
1	Port 1	<input checked="" type="checkbox"/>	●	27.2 °C	Setup	

Parameters	Description
Name	Description of temp port.
Offline Monitor	Check to enable to monitor the state of temp sensor. When abnormal temp occurs, device will send alert via the specified email.
Status	<p>Temperature sensor has 6 states: "Monitor Normal", "Monitor Alert", "Monitor Off-line, the "Non-monitor Normal" "Non-monitor Alert", and "Non-monitor Off-line".</p> <ul style="list-style-type: none"> ● Monitor Normal: "Offline Monitor" is checked. And external temperature is not higher than "High Alarm" or lower than "Low Alarm" setting. ● Monitor Alert: "Offline Monitor" is checked. And external temperature is higher than "High Alarm" or lower than "Low Alarm" setting. 🔥 Monitor Off-line: "Offline Monitor" is checked. Temperature Probe is not connected to PDU now. 🌱 Non-Monitor Normal: "Offline Monitor" is not checked. And external temperature is not higher than "High Alarm" or lower

Parameters	Description
	<p>than "Low Alarm" setting.</p> <p> Non-Monitor Alert: "Offline Monitor" is not checked. And external temperature is higher than "High Alarm" or lower than "Low Alarm" setting.</p> <p> Non-Monitor Off-line: "Offline Monitor" is not checked. Temperature Probe is not connected to device now.</p> <p>Move the mouse over the icons for its detailed information, and the menu is displayed as follows:</p> 
Temperature	Refer to the temperature value detected by the current temperature sensor.
State dropdown menu	This drop-down list offers four states for inquiry: "All", "Abnormal", "Alert", and "Normal" that will be displayed as per the temperature sensor state.
Setup	<p>Name: Temperature sensor name</p> <p>High Alarm: Set up the values of high temp alarm. When temp is higher than you set, the alarm will occur.</p> <p>Low Alarm: Set up the values of low temp alarm. When temp is lower than you set, the alarm will occur.</p> <p>Offline Monitor: Check to enable to monitor system. When temp is higher than you set, device will send alerts via email.</p> 
Device Temp	<p>Device Temp: Such device temperature.</p> <p>High Alarm: Set up the values of high temp alarm. When temp is higher than you set, the alarm will occur.</p> <p>Low Alarm: Set up the values of low temp alarm. When temp is lower than you set, the alarm will occur.</p>

Parameters	Description
	<p>Sensor state: Device Temp has 2 states: "Monitor Normal", and "Monitor Alert".</p> <ul style="list-style-type: none"> ● Monitor Normal: "Offline Monitor" is checked. And external temperature is not higher than "High Alarm" or lower than "Low Alarm" setting. ● Monitor Alert: "Offline Monitor" is checked. And external temperature is higher than "High Alarm" or lower than "Low Alarm" setting. <p>Move the mouse over the icons for its detailed information, and the menu is displayed as follows:</p> 

4.1.5 RH Sensor

Display the information of Offline Monitor, Status and Humidity Value of the sensor.

No	Name	Off-line Monitor	Status	RH	
1	Port 1	<input checked="" type="checkbox"/>	●	57 %	Setup

Parameters	Description
Name	Humidity sensor name.
Offline Monitor	Enabled to start monitoring, the device will send alarm data automatically through message or email whenever the humidity sensor name detects any abnormality.
Status	<p>Humidity sensor has 6 states: "Monitor Normal", "Monitor Alert", "Monitor Off-line, the "Non-monitor Normal" "Non-monitor Alert", and "Non-monitor Off-line".</p> <ul style="list-style-type: none"> ● Monitor Normal: "Offline Monitor" is checked. And external humidity is not higher than "High Alarm" or lower than "Low Alarm" setting. ● Monitor Alert: "Offline Monitor" is checked. And external humidity is higher than "High Alarm" or lower than "Low Alarm" setting.

Parameters	Description						
	<p>  Monitor Off-line: "Offline Monitor" is checked. Humidity Probe is not connected to PDU now. </p> <p>  Non-Monitor Normal: "Offline Monitor" is not checked. And external humidity is not higher than "High Alarm" or lower than "Low Alarm" setting. </p> <p>  Non-Monitor Alert: "Offline Monitor" is not checked. And external humidity is higher than "High Alarm" or lower than "Low Alarm" setting. </p> <p>  Non-Monitor Off-line: "Offline Monitor" is not checked. Humidity Probe is not connected to device now. </p> <p>Move the mouse over the icons for its detailed information, and the menu is displayed as follows:</p> <table border="1" data-bbox="646 873 1244 1052"> <tr> <td>Status</td> <td>Monitor Alert</td> </tr> <tr> <td>High RH Alarm</td> <td>90 %</td> </tr> <tr> <td>Low RH Alarm</td> <td>70 %</td> </tr> </table>	Status	Monitor Alert	High RH Alarm	90 %	Low RH Alarm	70 %
Status	Monitor Alert						
High RH Alarm	90 %						
Low RH Alarm	70 %						
RH	Refer to the humidity value detected by the current humidity sensor.						
State dropdown menu	This drop-down list offers four states for inquiry: "All", "Abnormal", "Alert", and "Normal" that will be displayed as per the temperature sensor state.						
Setup	<p>Name: Humidity sensor name</p> <p>High RH Alarm: Set up the values of high RH alarm. When humidity is higher than you set, the alarm will occur.</p> <p>Low RH Alarm: Set up the values of low RH alarm. When humidity is lower than you set, the alarm will occur.</p> <p>Offline Monitor: Check to enable to monitor system. When humid is higher than you set, device will sent alerts via email.</p> <div data-bbox="635 1608 1257 1825" style="border: 1px solid #ccc; padding: 5px; background-color: #e6f2ff;"> <p>Name : <input type="text" value="Port 1"/></p> <p>High RH Alarm : <input type="text" value="0"/> %</p> <p>Low RH Alarm : <input type="text" value="0"/> %</p> <p>Off-line Monitor : <input type="checkbox"/></p> </div>						

4.1.6 Daisy Chain

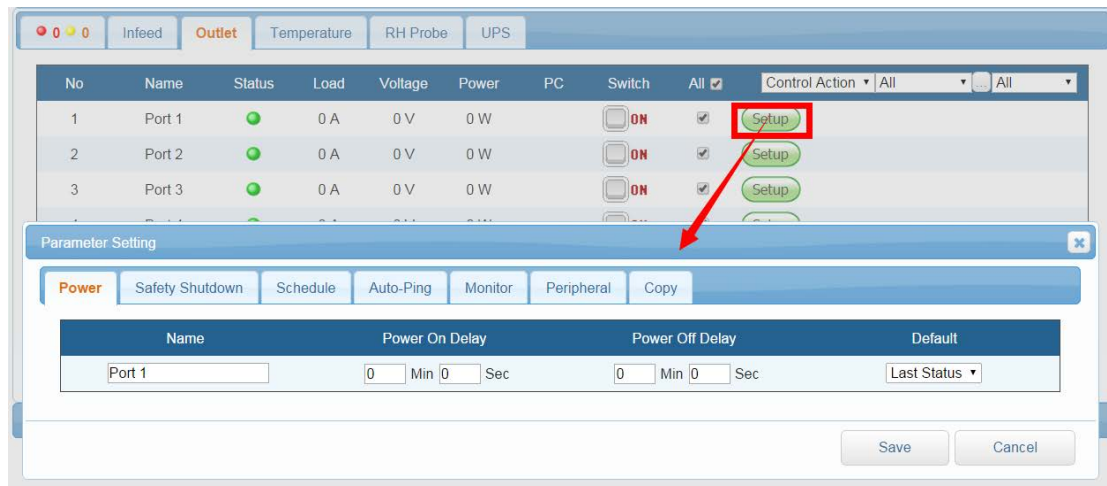

Display another connected switched IPM and status.

0 0 0	Infeed	Outlet	Temperature	RH Sensor	Daisy Chain
Model	Outlet Total	Status			
IPM-4220	4	●			

Parameters	Description
Model	The device of daisy chain.
Outlet Total	The outlet power port.
Status	<p>Device of daisy chain has 2 states: "Monitor Normal", "Monitor Alert".</p> <ul style="list-style-type: none"> ● Normal online state. ● Abnormal online state <p>Move the mouse over the icons for its detailed information, and the menu is displayed as follows:</p> <div style="text-align: center;">  </div>

4.2 Outlet Power Setup

Press Setup and the following window will appear; users can set the outlet power, safe shutdown, schedule, auto-ping, monitor (Only for IPM-8220), parameter and copy.

4.2.1 Power

Power setting list is mainly for setting the relevant information of power on/off of all lines.

Parameter Setting ✕

Power
Safety Shutdown
Schedule
Auto-Ping
Monitor
Peripheral
Copy

Name	Power On Delay	Power Off Delay	Sync Port	Default
Port 1	0 Min 0 Sec	0 Min 0 Sec	▼	Last Status ▼

Parameters	Description
Name	Description of each power outlet.
Power on delay	Set the number of seconds that device waits after a command is issued before applying power to an outlet.
Power off delay	Set the number of seconds that device waits after a command is issued before removing power from an outlet.
Sync Port	To be displayed after concatenation is enabled is the setting of the power outlet to be linked with the power outlet of the concatenated device.
Default	You may set preset switch status when local power is lost and comes back again. The statuses from the drop-down list are 1.ON, 2.OFF, 3 Last statuses before power was lost.

4.2.2 Safe Shutdown

This page is for setting the computer device name connected to the power outlet. When users want to power off the outlet, firstly the computer connected should be shut down, and then switch off the power within the preset delay time.

Power
Safety Shutdown
Schedule
Auto-Ping
Monitor
Peripheral
Copy

MAC	Delay Delivery	Computer Name
<input style="width: 20px; height: 20px;" type="text"/> : <input style="width: 20px; height: 20px;" type="text"/> : <input style="width: 20px; height: 20px;" type="text"/> : <input style="width: 20px; height: 20px;" type="text"/> : <input style="width: 20px; height: 20px;" type="text"/> : <input style="width: 20px; height: 20px;" type="text"/>	<input style="width: 20px; height: 20px;" type="text"/> Sec.	<input style="width: 50px; height: 20px;" type="button" value="Please Select"/>

Parameters	Description
MAC	Please enter the Computer MAC address; the main function is computer remote Wake-up On LAN (WOL).
Delay Delivery	After power delay delivery time is enabled, the WOL command is delivered to computer.
Computer Name	Prior to the execution of safe shutdown, an application should be installed on the computer. After successful installation and registration, select the computer to be shut down from the drop-down list and then it will be displayed on the web page.

4.2.3 Schedule

In this option, work schedule of the time for power outlet on/off is seen.

Power Safety Shutdown **Schedule** Auto-Ping Monitor Peripheral Copy

Period	Time	Action	Delete
Period : Holidays January 01 00 : 00 ON Add			

Parameters	Description
Period	Set the work cycle of the power outlet; the cycle can be divided into Holiday, Month, Week, and Day. For example, if the cycle is Day, it means the power will perform the command at the set time every day.
Time	Set the work hours of the power outlet in the drop-down list.
Action	Set up power outlet to perform the command of "on", "off", "Reboot" or "Short on".
Delete	To delete the schedule, click the icon of "Delete" of the schedule.

4.2.4 Auto-Ping

When the power supply connects with network devices, this menu can set the address of the network device, detect time interval, detection frequency, time of reboot and re-detection.

Power Safety Shutdown Schedule **Auto-Ping** Monitor Peripheral Copy

Ping	Host	Ping Interval Time(Min.)	Ping Times	Reboot	Re-Ping Time(Min.)
<input type="checkbox"/>	192.168.1.175	0	0	<input type="checkbox"/>	0

Parameters	Description
Ping	Enable / Disable network detection.
Host	Network device address to be detected.
Ping Interval Time (Min.)	Execute the time interval of PING network devices.
Ping Times (Detection frequency)	Frequency of continuous abnormality during Ping network device, when the detected Ping failure frequency exceeds this set value; alert will be given through message or email.
Reboot	Set whether to reboot the network device when the detected Ping failure frequency exceeds this set value.

Parameters	Description
Re-Ping time (Min.)	The delay time for re-executing PING detection when the network device is on after network device reboots.

4.2.5 Monitor (Only for IPM-8220)

This function provides the ability to set power outlet current value, real-time off of power outlet in case of any current abnormality to avoid any damage to the devices connected with the outlet.

Power Safety Shutdown Schedule Auto-Ping **Monitor** Peripheral Copy

Overload	High Alarm	Low Alarm
0.0 A	0.0 A	0.0 A

Parameters	Description
Overload	Current value of the overload power, alarms will be given when the input power current exceeds this alarm value.
High alarm	Current value to be alerted when the power outlet current is too high.
Low alarm	Current value to be alerted when the power outlet current is too low.

4.2.6 Peripheral

You may set up peripheral at this tab to monitor device and command it with On, Off, Reboot and Short on; set up different conditions with different peripheral types.

Power Safety Shutdown Schedule Auto-Ping Monitor **Peripheral** Copy

Name + ✖

Operation type:

SNMP Trap name:

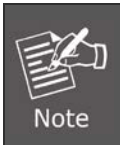

Monitor:

Monitor condition:

Type	Port	Term	Value	Duration	Delete
Type : <input type="text" value="Infeed Current"/>	Port : <input type="text" value="1.Loop 1"/>	>	Value : <input type="text"/>	Duration : <input type="text"/>	Sec. <input type="button" value="Add"/>

Parameters	Description
Name	Add peripheral name.
Operation type	As the peripheral matches, it would perform the action for On, Off, Reboot or Short on.
SNMP Trap name	The Name shows up when sending alarm. English and number are only accessible.
Monitor	Check this item and the system would perform peripheral monitoring.

Parameters	Description
Monitor condition	<p>Type: Use drop-down list to select peripheral type. (e.g., External Temp)</p> <p>Port: Select the port to be monitored.</p> <p>Term: You may choose the symbols: > (higher), < (lower) and = (equal).</p> <p>Value: The device would command the order as temp reaches this value.</p> <p>Duration: The duration of value that is compliant with the peripheral conditions.</p> <p>Delete: After clicking the icon "X", it would pop up a confirm window; your condition would be deleted. To command device, please reset the command.</p>

All of the newly added conditions should match or the device will not do as you command; if only one condition is matched, device will unmove, either.

4.2.7 Copy

To quickly set up the power outlet parameter of each line, after setting the first line, the parameters can be copied to other lines of power outlet.

Power
Safety Shutdown

4	Port 4	<input type="checkbox"/>
5	Port 5	<input type="checkbox"/>
6	Port 6	<input type="checkbox"/>
7	Port 7	<input type="checkbox"/>
8	Port 8	<input type="checkbox"/>

Parameters	Description
Parameter drop-down menu	Allow to copy parameters such as power source setting, safe shutdown, schedule, auto-ping, current monitoring and peripheral.

Parameters	Description
	Press " Save " after selecting a single power outlet or selecting all to copy the selected outlet parameters to the clicked power outlet(s).

4.3 System

On this web page, users can set Network, Email server, Message server, SNMP, SysLog, Peripheral parameters, and other relevant data.

4.3.1 Network Setting

This menu is mainly for setting the basic data of network.

Host Settings
Ping Test

Enabled DHCP:

Host:

Subnet Mask:

Gateway:

Ethernet Card Speed:

MAC: A8:F7:E0:00:09:24

Parameters	Description
Enabled DHCP	Use checkbox to enable DHCP. It will assign IP address.
Host	Assign the Network IP address for the power switch.
Subnet Mask	Set up the subnet mask info of this equipment.
Gateway	Set up the gateway port of this equipment.
MAC	Display MAC address.
Ping Test	Confirm whether the device with the IP address or DNS name is connected to the network.

Domain Name Server	
Primary DNS Server:	<input type="text" value="8.8.8.8"/>
Secondary DNS Server:	<input type="text"/>

Parameters	Description
Primary DNS Server	Configure the IP and DNS server addresses for Network Adapter 1.
Secondary DNS Server	Configure the IP and DNS server addresses for Network Adapter 2.

Web Server	
Enabled HTTP:	<input checked="" type="checkbox"/>
Enabled HTTPS:	<input type="checkbox"/>
Http Port:	<input type="text" value="80"/>
Https Port:	<input type="text" value="443"/>

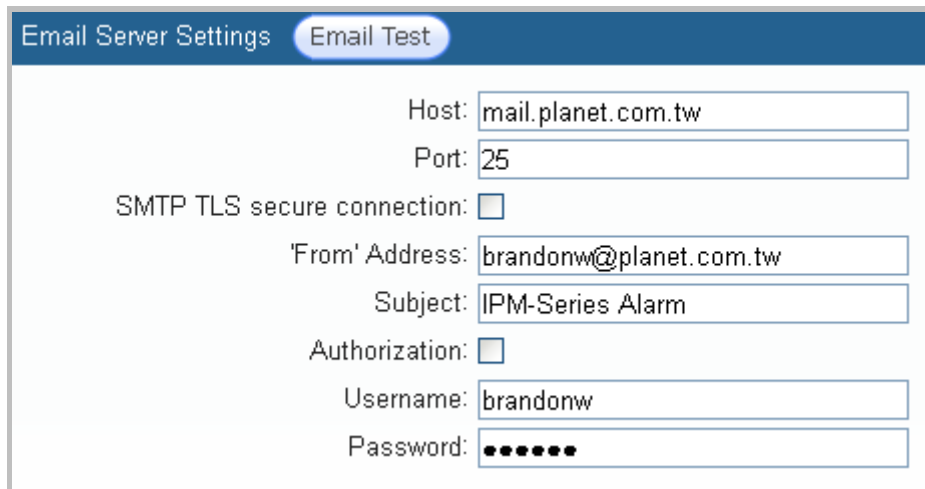

Parameters	Description
Enabled Http	Allows browser to connect with smart monitor by HTTP.
Enabled Https	Allows browser to connect with smart monitor by HTTP SSL.
Http Port	Provides browser to communicate by HTTP with smart monitor.
Https Port	Provides browser to communicate by HTTP SSL with smart monitor.

Firewall	
Disable ICMP echo (ping) responses:	<input type="checkbox"/>

Parameters	Description
Disable ICMP Response	When Disable ICMP Response check box is selected, the examination will not be responded.

4.3.2 Email Server

When there is a triggered warning from the setup of this PDU, this device will send out alert message to the preset email accounts.

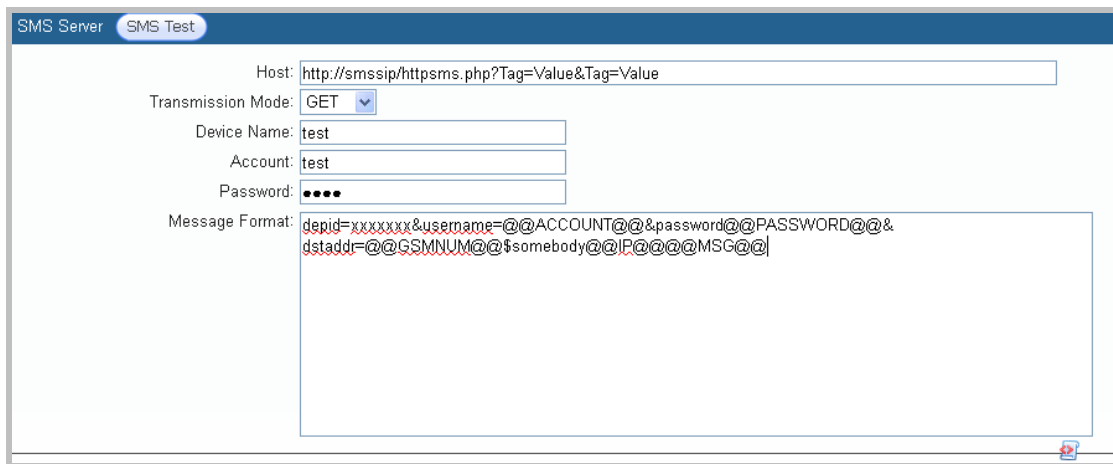

Parameters	Description
Host	It is the Host IP address of the e-mail sending an alarm e-mail when an event occurs.
Port	It is the port of SMTP mail server. Default is 25.
SMTP TLS secure connection	Check to enable e-mail encryption.
From Address	It shows the sender's email address.
Subject	It shows the subject of the email.
Authorization	If the mail server needs to identify the user, please enable the checkbox and set up the account and password.
Username	The account to log in to mail server.

Parameters	Description
Password	The password to log in to mail server.
Email Test	After setting up the above info, you can send a test mail to make sure this function is normal.

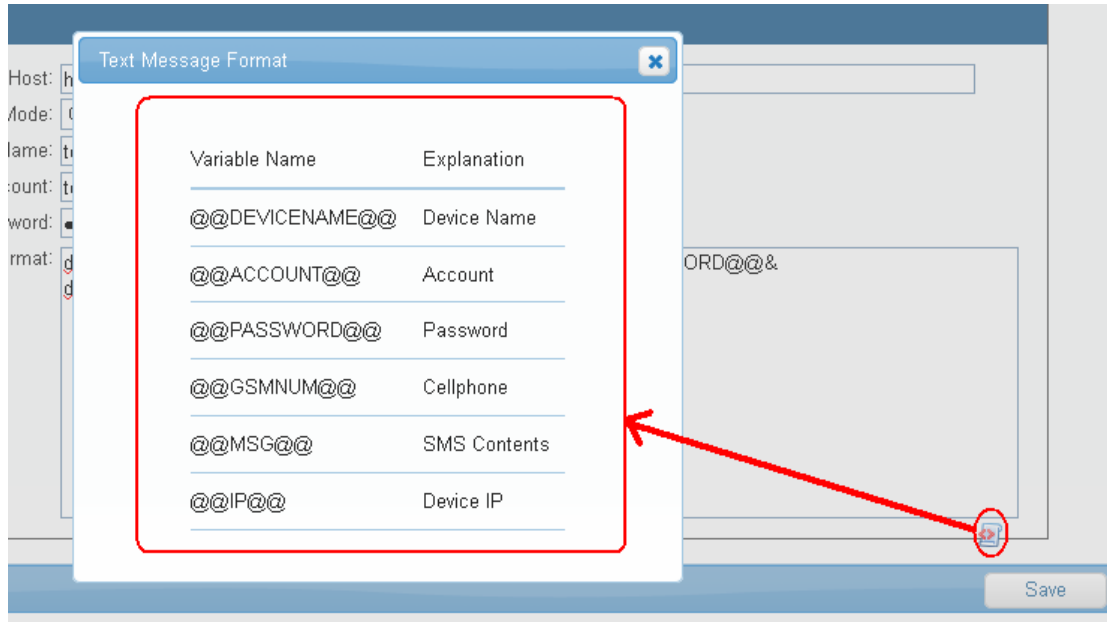

4.3.3 SMS Server

In this section, user can set up the warning message and info to the SMS server. The protocol here is supported by many SMS suppliers' (ISP) API. System will send out account, password, time, and related info via HTTP to the SMS server of ISP supplier or preset SMS server.

Parameters	Description
Host	Host IP address of SMS Server.
Transmission Mode	Follow ISP suppliers' rules to send out short message via GET or POST protocol to sender's server.
Device Name	The name user wants to reveal.
Account	The account to fill in when sending SMS. The same as @@ACCOUNT@@ .
Password	The password to fill in when sending SMS. The same as @@PASSWORD@@ .
Message Format	We provide "auto bring-in" system with username, password, number, main host and message content.

Parameters	Description
SMS Test	After setting up the above info, you can send a test mail to make sure this function is normal.

Parameters	Description
@@DEVICENAME@@	The device name will show when sending a message.
@@ACCOUNT@@	The account to send the message.
@@PASSWORD@@	The password to send the message.
@@GSMNUM@@	The number to send the message.
@@MSG@@	Message content will show when sending a message.
@@IP@@	Device IP will show when sending a message.

Note Message Format is related to your message content, a content may not stay the same as well.

4.3.4 SNMP

You can set up SNMP Agent and SNMP Trap on this page.

SNMP v1/v2c Agent

SNMP v1/v2c Enable:

SNMP Port:

Read Community:

SNMP Writing:

Write Community:

Parameters	Description
SNMP v1/v2 Enable	Enable SNMP v1/v2.
SNMP Port	Set the destination port. Default is 161 .
Read Community	Key-in passwords in the Community Name field. Default is public .
SNMP Writing	Select the checkbox to enable SNMP Write-in.
Write Community	Key-in passwords in the Community Name field. Default is private .

SNMP v3 Agent

SNMP v3 Enable:

User name:

Type:

Authorization type:

Authorization password:

Private type:

Private password:

Parameters	Description
SNMP v3 Enable	Enable SNMP v3.
User Name	The name is SNMP v3 command.
Type	There are two types: Read Only , Read and Write .
Authorization Type	There are two types: MD5 and SHA .
Authorization Password	The password of authorization type. Use MD5 or SHA.
Private Type	There are two types: No and DES .

Parameters	Description
Private Password	For private password, use DES. Select DES type to key-in password.

SNMP Device Info

sysName:

sysContact:

sysLocation:

Parameters	Description
sysName	The name displayed on SNMPAgent.
sysContact	The contact displayed on SNMPAgent.
sysLocation	The location displayed on SNMPAgent.

SnmTrap SNMP Trap Test

Host	Port	Authentication String	Delete
Host : <input style="width: 80%;" type="text"/>	Port : <input style="width: 50%;" type="text" value="162"/>	Authentication String : <input style="width: 80%;" type="text"/>	<input type="button" value="Add"/>

Parameters	Description
Host	The Host IP address of SNMP Trap.
SNMP Trap Port	The phase connects to SNMP Trap. Default is 162 .
Authentication String	The authentication string to access SNMP Trap.
SNMP Test	After setting up the above info, you can send a test mail to make sure this function is normal.

4.3.5 Syslog

Remote Power Manager will send out text message to syslog receiver (syslog server). Please do as follows:

Syslog
Syslog Test

Host	Port	Delete
Host : <input style="width: 80%;" type="text"/>	Port : <input style="width: 80%;" type="text" value="514"/>	<input type="button" value="Add"/>

Parameters	Description
Host	Enter Syslog Server Host IP.
Port	Enter Connect Port for Syslog Server. Default is 514 .
Syslog Test	After setting up the above info, test it to make sure this function is normal.

4.3.6 Serial Port (UART)

This menu is mainly for setting the data of COM 1 (UART 1), and COM 2 (UART 2).

Serial Port 1

Kind:

Data Rate (bps):

Data:

Parity:

Stop:

Serial Port 2

Kind:

Data Rate (bps):

Data:

Parity:

Stop:

Parameters	Description
Kind	Serial Port 1 There are four UART types: Disable, Console, API and UPS Serial Port 2 There are four UART types: Disable, Daisy Chain, API and UPS. Disable: Cancel UART function. Console: Computer connects with the device through RS232 and

Parameters	Description
	<p>operate the device through terminal program</p> <p>API: Other devices can operate the current device through API protocol. As for the use of API, please refer to the appendix UART API protocol.</p> <p>UPS: Enable this when the device is to be connected with UPS to monitor UPS information.</p> <p>When the type selected is UPS, the following window will be displayed; press "search" to search the device after selecting the "type".</p> <div style="border: 1px solid #ccc; padding: 5px; width: fit-content; margin: 10px auto;"> <p>Kind: <input type="text" value="APC Smart UPS"/> <input type="button" value="v"/></p> <p>Model: <input type="text"/> <input type="button" value="Search"/></p> </div> <p>Daisy Chain: When the device is to be concatenated with the other IPM to link with the power outlet, please enable this; as for the usage and limitations of Daisy Chain, please see 2.2 Product Concatenation.</p> <div style="border: 1px solid #ccc; padding: 5px; width: fit-content; margin: 10px auto;"> <p>Model: <input type="text"/> <input type="button" value="Search"/></p> </div>
Data Rate	Set UART Bob rate parameter.
Data	Set UART bit parameter.
Parity	Set UART Parity Check parameter.
Stop Bits	Set UART stop bit parameter

4.3.7 Peripheral Parameters

This menu is mainly for setting current, tolerance ranges of temperature and humidity, power statistics and probe as well as the panel operating, etc.

Infeed / PDU
Released Load (Range): <input style="width: 60px;" type="text" value="0.5"/> A
Temp & RH Sensor
Temp Scale: <input style="width: 60px;" type="text" value="Celsius"/> <input type="button" value="v"/>
Released Temp (Range): <input style="width: 60px;" type="text" value="2.0"/> °C
Released RH (Range): <input style="width: 60px;" type="text" value="2"/> %

Parameters	Description
Released Load (Range)	You may set up threshold current to avoid floating power triggered warning reaction. The warning will be dismissed by system when power current is lower than threshold current.
Temp Scale	You can choose either Celsius or Fahrenheit.
Released Temp. (Range)	You may set up threshold temp. to avoid floating power triggered warning reaction. The warning will be dismissed by system when temp. is lower than threshold temp.
Released RH (Range)	You may set up threshold RH. to avoid floating power triggered warning reaction. The warning will be dismissed by system when the humidity is lower than threshold RH.

RCI (Rack Cooling Index)
Visible: <input type="checkbox"/>
Kind: <input style="width: 60px;" type="text" value="ASHRAE, 2008"/> <input type="button" value="v"/>
High Temp: 32 °C
Suggested High Temp: 25 °C
Suggested Low Temp: 20 °C
Low Temp: 15 °C

Parameters	Description
Visible	Set up to display for 4.1.4 Temperature RCI blank.
Kind	There are three types of RCI: "NEBS, 2001", "ASHRAE, 2004" and "ASHRAE, 2008".

Parameters	Description
High Temp	Display the RCI type maximum load capacity for the temperature.
Suggested High Temp	Display the RCI type high capacity for the temperature.
Suggested Low Temp	Display the RCI type low capacity for the temperature.
Low Temp	Display the RCI type minimum load capacity for the temperature.

Power Statistics

CO2 Emission: kg/kwh
 Electricity Bill: dollar/kwh
 Already Consumed: kwh

Parameters	Description
CO2 Emissions	You may set up threshold current to avoid floating power triggered warning reaction. The warning will be dismissed by system when power current is lower than threshold current.
Temp Scale	You can choose either Celsius or Fahrenheit.
Released Temp (Range)	You may set up threshold temp. to avoid floating power triggered warning reaction. The warning will be dismissed by system when temp is lower than threshold temp.

Interface Control (Elite)

Direction: v
 Locked or not: v
 'SET Button' Timeout: Sec.
 Locked Time: Sec.
 Timeout: Sec.

Parameters	Description
Direction (only for IPM-8220)	You may set up threshold current to avoid floating power triggered warning reaction. The warning will be dismissed by system when power current is lower than threshold current.
Locked or not	User cannot control the switch through LED panel as it is locked.
"SET Button" Timeout	Use Navigation button to view LCD panel: LCD panel will show the initial picture of the first phase automatically as no operation is processing.
Locked Time	System will log out automatically after timeout you set as no operation is processing as LED panel stay in switch setup status.
Timeout	In alarm setting status: LCD panel will show the initial picture of the first phase automatically as no operation is processing.

4.3.8 Other

This menu is mainly for setting device web page language, operation timeout and device date format.

General Setting

Language:

'System' Timeout(Min.):

Time Format:

MQTT Host:

MQTT Port:

Parameters	Description
Language	Traditional Chinese, Simplified Chinese and English.
"System" Timeout (Min)	This is the last time that the device will log out automatically with no operation in process.
Time Format	Choose equipment time format. There're three formats from the drag down list: YYYY/MM/DD/HH/MM/SS MM/DD/YYYY/HH/MM/SS DD/MM/YYYY/HH/MM/SS

Parameters	Description
MQTT Host	Enter MQTT Host IP.
MQTT Port	Enter Connect Port for MQTT. Default is 1883 .

Security Setting

IP Lock-up period(Min.):
 IP Login times:

Parameters	Description
IP Lock-up Period (Min.)	The period of such IP has been locked up.
IP Login Times	The number of times that user logs in.

4.4 Firewall

In this tab, you may set up permitted IP or Mac address to access this remote power manager.

IPM-4220
User: admin Login Time: 11/28 18:04 Will be logout after 29:41 [Reset](#) Logout

4.4.1 IP Filter

User can set up permitted IP section on this page.

IP Filter
MAC Filter

IP Filter

Enable IP Filter:

Allowed IP Section Delete

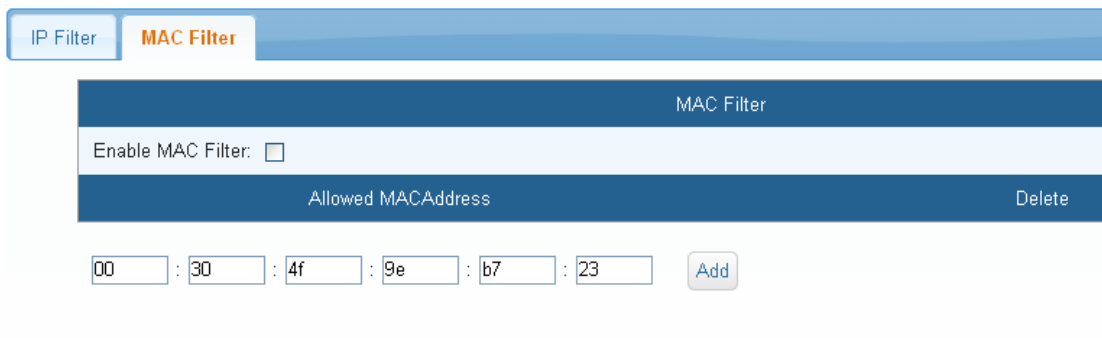

~

Add

Parameters	Description
Enable IP Filter	Allow authorized IP address to access this device.
Allowed IP Section	After keying in permitted IP section, please click ADD to implement this action. To delete a specific IP address, please click "X".

4.4.2 MAC filter

This menu is mainly for setting of Network MAC Address having access to this device.

The screenshot shows the MAC Filter configuration page. At the top, there are two tabs: 'IP Filter' and 'MAC Filter'. Below the tabs, there is a section titled 'MAC Filter' containing an 'Enable MAC Filter' checkbox. Underneath is a table with the header 'Allowed MACAddress' and a 'Delete' button. At the bottom, there are six input fields for entering a MAC address in hexadecimal format (00, 30, 4f, 9e, b7, 23) and an 'Add' button.

Parameters	Description
Enable MAC Filter	Mark this square to enable Mac filter and press the Save button to store the setting after permitted Mac address is built. System will reject people who try to access this remote power manager from other Mac addresses. Unmark the square and press the Save button if you expect to cancel this function.
Allowed MAC Address	Enter permitted MAC number. Please click ADD to implement this action. To delete a specific IP address, please click "X".

MAC blocking feature is only available for local area network; if a router is used, the original adapter MAC address may be changed.

4.5 Account

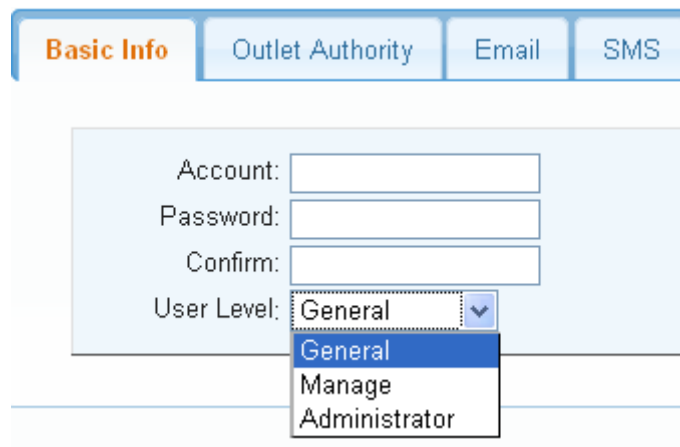

This menu allows the administrator to set up 20 sets (max) of authorized user accounts. You can Add, Modify and Delete the User account.

Account	User Level	Modify	Delete
admin	Administrator		
brandon	Manage		

Parameters	Description
Modify	Modify the previous setting. Operation of Alarm.
Delete	Click Delete icon : browser will pop up a Confirmation of delete window. Click Confirm : this Account cannot be utilized any longer.

4.5.1 Basic Info

To set up account, password and user type.

Parameters	Description
Account	The account to log in to this device.
Password	The password to log in to this device.
User Level	User authority operation can be grouped into General, Manage and Administrator as shown below: <ul style="list-style-type: none"> ● General: Only Switch control is permitted, but not authorized to change system settings. ● Manage: Parameter setting is permitted, and controllable switch can be changed. ● Administrator: Administrator can manage the whole network.

4.5.2 Outlet Authority

Outlet Authority tab is mainly to open up outlet authority to other users.

No	Name	All <input type="checkbox"/>
1	Port 1	<input checked="" type="checkbox"/>
2	Port 2	<input checked="" type="checkbox"/>
3	Port 3	<input checked="" type="checkbox"/>
4	Port 4	<input checked="" type="checkbox"/>
5	Port 5	<input checked="" type="checkbox"/>
6	Port 6	<input checked="" type="checkbox"/>
7	Port 7	<input checked="" type="checkbox"/>
8	Port 8	<input checked="" type="checkbox"/>

4.5.3 Email

System would send email when alarm occurs.

Enable alert:
 'Send' To:
 Parameter:
 Infeed:
 Outlet Control:
 Outlet:
 Temp:
 RH:
 Daisy Chain:

Parameters	Description
Enable Alert	Check to open email alarm system informed by email.
'Send' To	Enter the mail address of Receiver.

Parameters	Description
Parameter	Use the checkbox to enable the setting. The system will follow the warning method you choose.
Infeed	Use the checkbox to enable the setting. When abnormal condition of infeed happens, system will send a warning message by the way you command.
Outlet Control	Check to enable warning as abnormal condition of switch operation occurs.
Outlet	Check to enable warning as abnormal condition of outlet occurs.
Temp	Use the checkbox to enable the setting. When abnormal device temperature occurs, system will send a warning message to manager.
RH	Check to enable warning as abnormal condition of humidity occurs.
Daisy Chain	Check to enable warning as abnormal condition of concatenation occurs.

4.5.4 SMS

System would send SMS when alarm occurs.

Basic Info
Outlet Authority
Email
SMS

Enable alert:

Cellphone:

Parameter:

Infeed:

Outlet Control:

Outlet:

Temp:

RH:

Daisy Chain:

Parameters	Description
Enable Alert	Check to open email alarm system informed by SMS.

Parameters	Description
Cellphone	Informed by short message, please fill out the right cellphone number.
Parameter	Use the checkbox to enable the setting. The system will follow the warning method you choose.
Infeed	Use the checkbox to enable the setting. When abnormal condition of infeed happens, system will send a warning message by the way you command.
Outlet Control	Check to enable warning as abnormal condition of switch operation occurs.
Outlet	Check to enable warning as abnormal condition of outlet occurs.
Temp	Use the checkbox to enable the setting. When abnormal device temperature occurs, system will send a warning message to manager.
RH	Check to enable warning as abnormal condition of humidity occurs.
Daisy Chain	Check to enable warning as abnormal condition of concatenation occurs.

4.6 Time

You can set up the time server on this page.

Device Time

Date (YYYY/MM/DD):

Time (HH:MM:SS):

Time Synchronization

▼

Date (YYYY/MM/DD):

Time (HH:MM:SS):

Time Server Setting

Synchronize with Time Server

Time Server:

Time Zone

Time Zone: GMT :

Enable daylight saving time

Daylight saving time start at:

Daylight saving time finish at:

Parameters	Description
Device Time	Date and time of the system.
Time Synchronization	You may either scroll down to select Sync with computer or Manual Setting .
Synchronization with Time Server	Select this time method if you want the system time of this power switch to be the same as Greenwich Mean Time (GMT).
Time Server	You can build a new NTP server and then sync with it to be the same date and time. If not, click Time Server List, and choose one from the drop-down list.
Time Zone	The time here is following Greenwich Mean Time as most NTP servers do. User must adjust the time to be the same with local time.

Parameters	Description
Enable daylight saving time	Set the Daylight saving time from Sunday to Saturday

4.7 Chart

This menu is mainly for query infeed, device temperature and statistic data.

Parameters	Description
Category	You may either scroll down to select infeed or device temperature .
Time Interval	You may either scroll down to select 1 min. or 30 mins .
Search	See the reference date chart as shown in the table.
Export	Download this data chart.

4.8 Event

The web page recorded the recent 200 logs, including the time, type and message.

Event Record			
	Time	Type	Message
1	2016/06/24 10:41:23		User[admin][192.168.0.188]login
2	2016/06/24 09:19:41		User[admin][192.168.0.188]login
3	2016/06/23 18:20:07		User[admin][192.168.0.188]login
4	2016/06/23 16:59:59		User[admin][192.168.0.188]login
5	2016/06/23 15:30:15		User[admin][192.168.0.188]login
6	2016/06/23 14:38:37		User[admin][192.168.0.188]login
7	2016/06/23 13:11:10		User[admin][192.168.0.188]login
8	2016/06/23 11:17:48		User[admin][192.168.0.188]login
9	2016/06/23 11:17:08		Reboot software

Page 1 of 4 View 1 - 50 of 9

Parameters	Description
Refresh	Click the Refresh button to refresh the screen.
Download	Click the Download button to save the event log information. The event log is saved in .txt format.
Delete	Click the Delete button to delete the Event logs.

4.9 Upgrade

This web page is for upgrading the device firmware and the configuration files. You can download the latest firmware from the suppliers' web page to upgrade the firmware of IPM series.

Product Name: IPM-8220

Firmware Version: 1.006 Build: 201605161509 Reboot Device

Please reboot device first before upgrade firmware.

Upload firmware: Choose File

Upload configuration: Choose File

Download configuration: Save

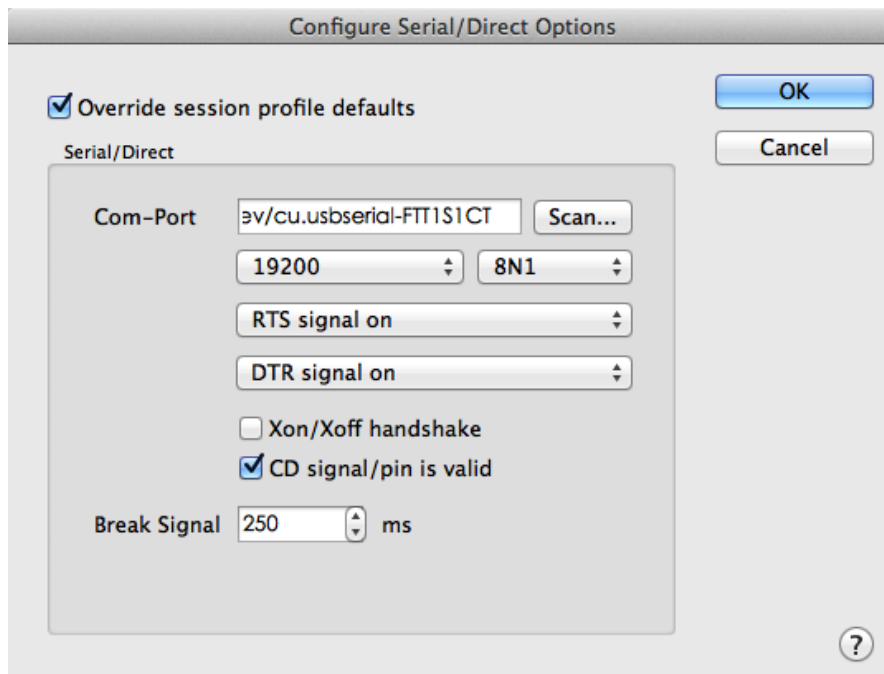

Parameters	Description
Upload firmware	To update the firmware online, click " Browse... " to select the firmware. Then click "Upgrade" to proceed.
Upload configuration	Upgrade from previous saved setting.
Download configuration	Download the current setting to PC.

Chapter 5. Console Operation

In this chapter, users can learn how to operate power On/off and set the network parameters through Console. When learning console operation, users should firstly set the type of device UART1 as Console and set relevant parameters. As for the setting of UART1, please refer to **4.3.6 Serial Port (UART)**.

5.1 Online Set

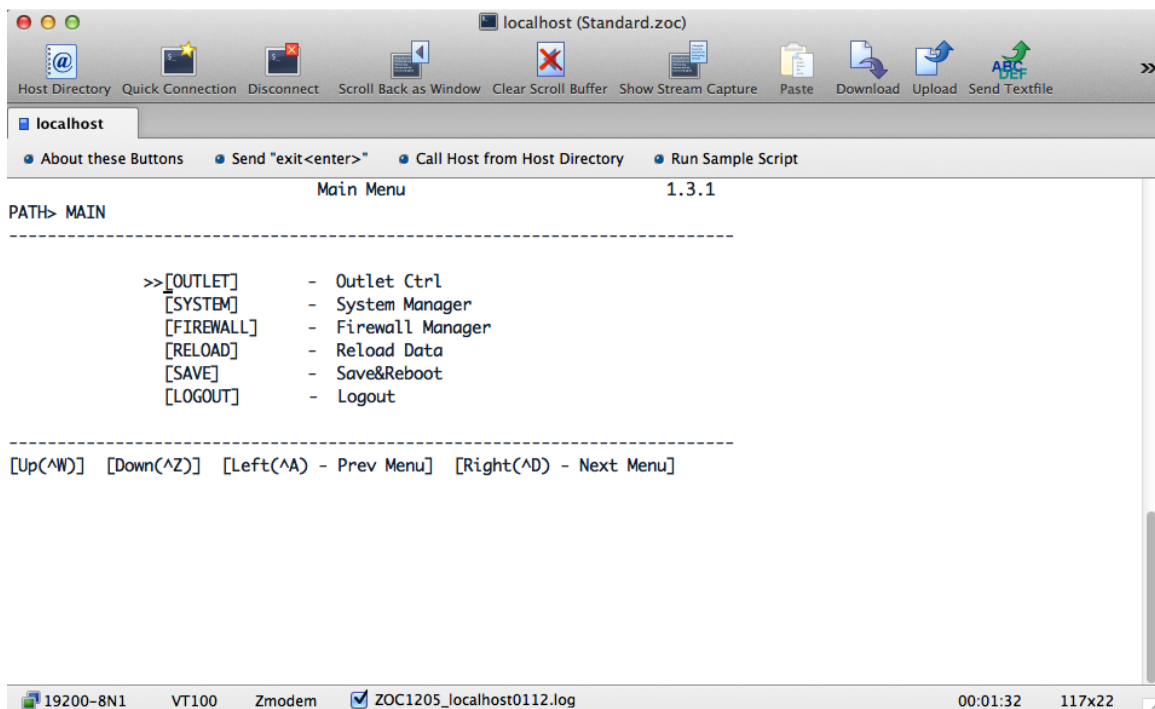

Use the building HyperTerminal or similar programs to IPM Console; related parameter setting of terminal program Comport should be the same with UART1 set values.

After setting is done, the HyperTerminal will display the sign-in menu; please enter the system account and password (admin and admin) established in device daemon.

After entering finished, operation menu will be displayed to control power switch and set network data.

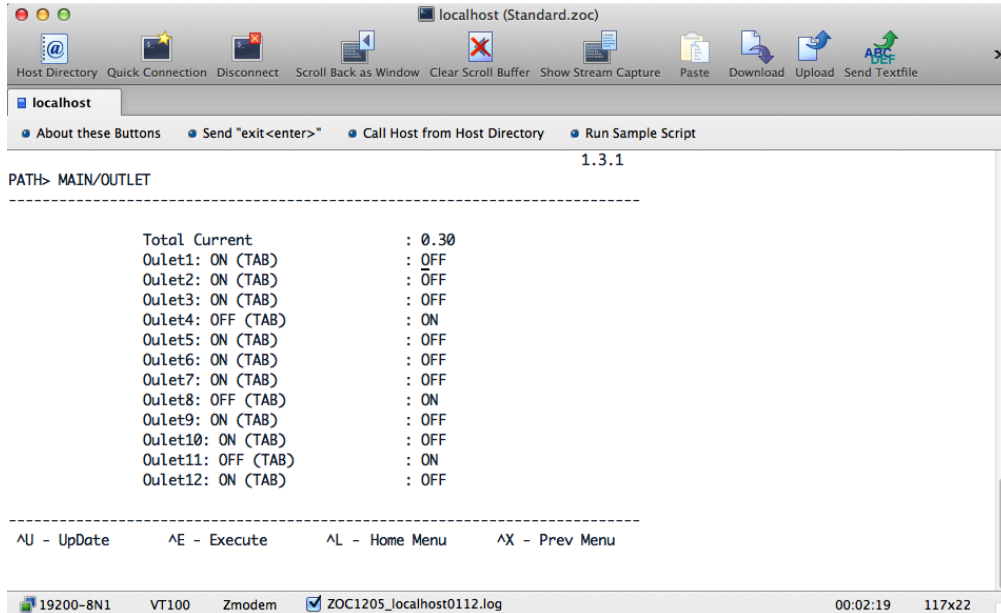

Operation method of the menu is as follows:

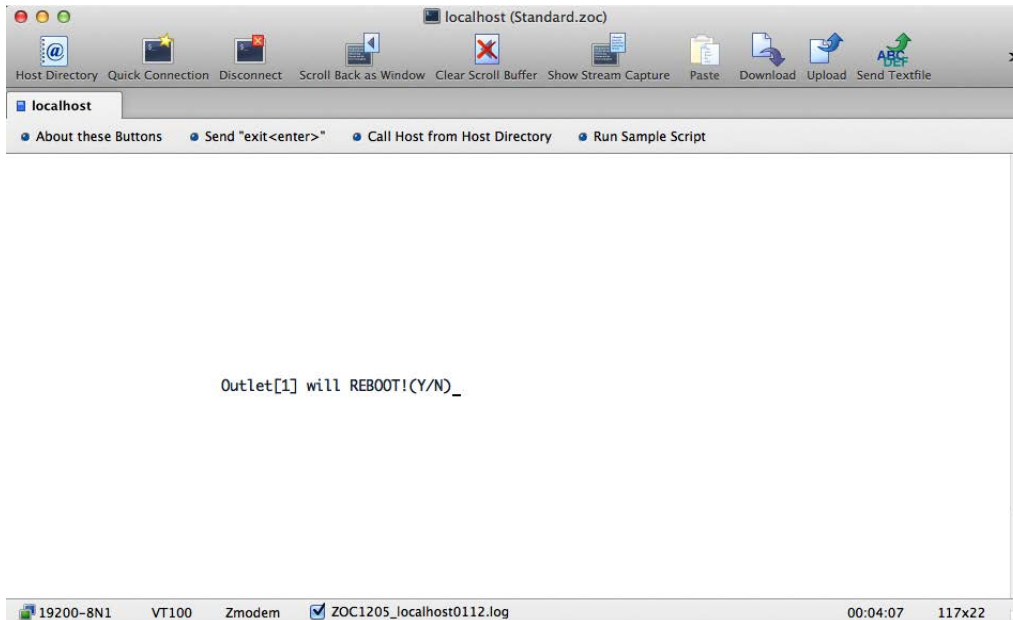

1. Press ↑ or ^W can drift the menu, >> drift upward.
2. Press ↓ or ^Z can drift the menu, >> drift downward.
3. Press → or ^D can select the data of the next menu.
4. Press ← or ^A can select the data of the previous menu.

5.2 Power Control

After selecting "OUTLET" from the main menu, press → or ^D to enter power control operation.

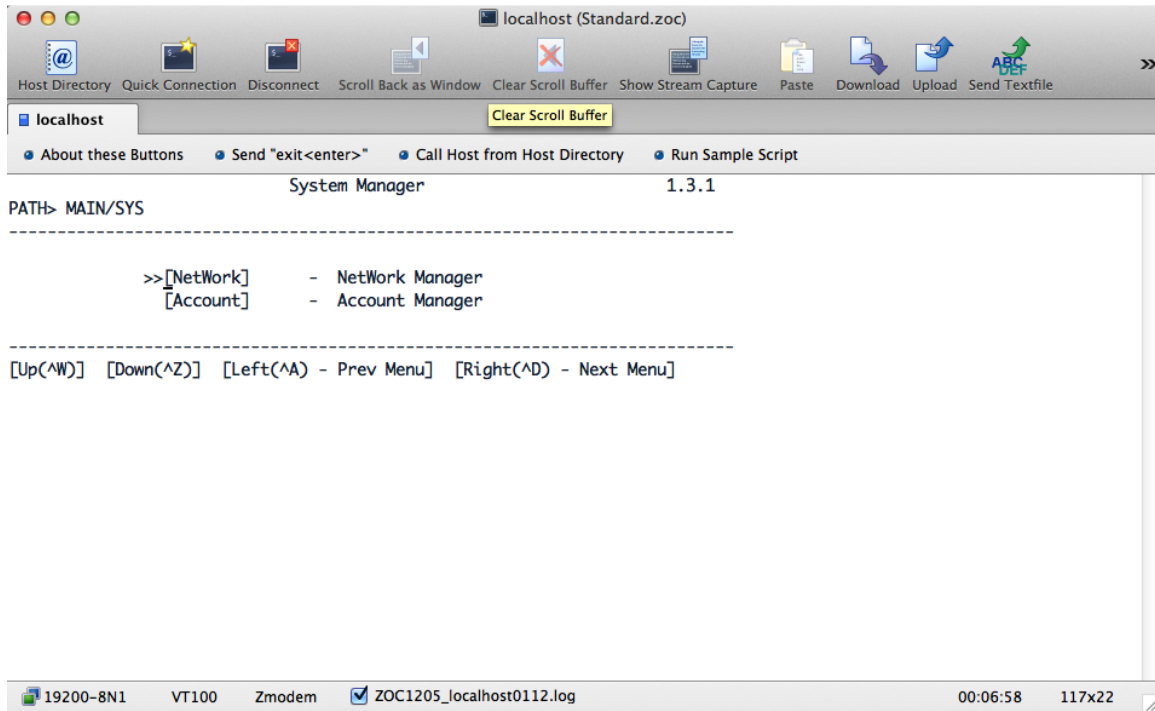

Move Up and Down keys to move the cursor to the power outlet to be operated. When the Outlet is ON, press Tab for deciding the state of this line: Reboot or Off. After selection, press "Enter" or "E" to enter the Query window to decide any operation of this outlet; if yes, press "Y"; otherwise "No".

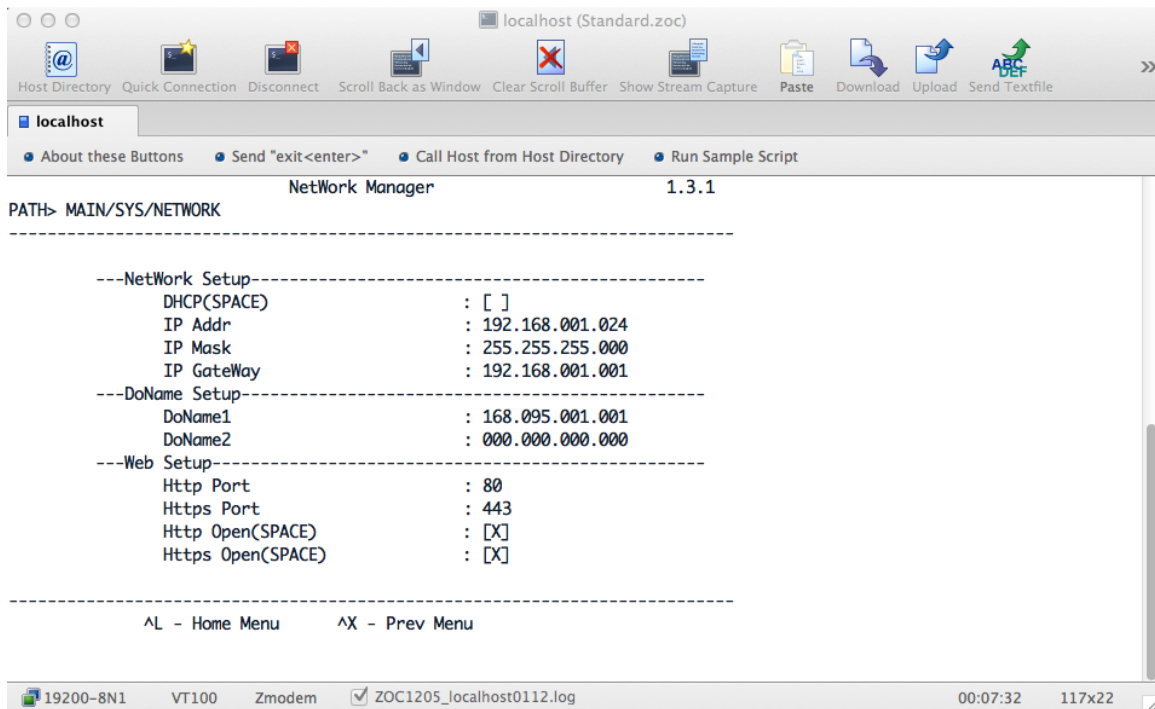

5.3 System Preferences

After selecting "SYS" from the main menu, press → or ^D to enter System Preferences setting.

5.3.1 Network Preferences

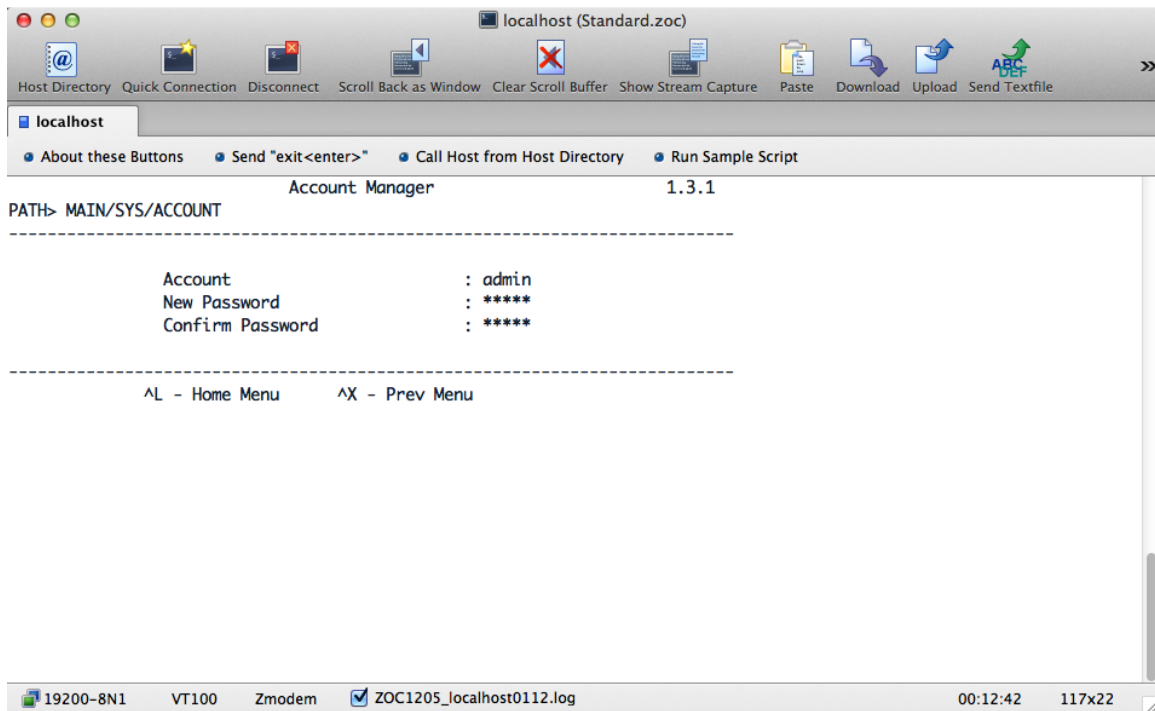

After selecting "NetWork" from the main menu, press → or ^D to enter System Preferences setting.

5.3.2 Account Preference

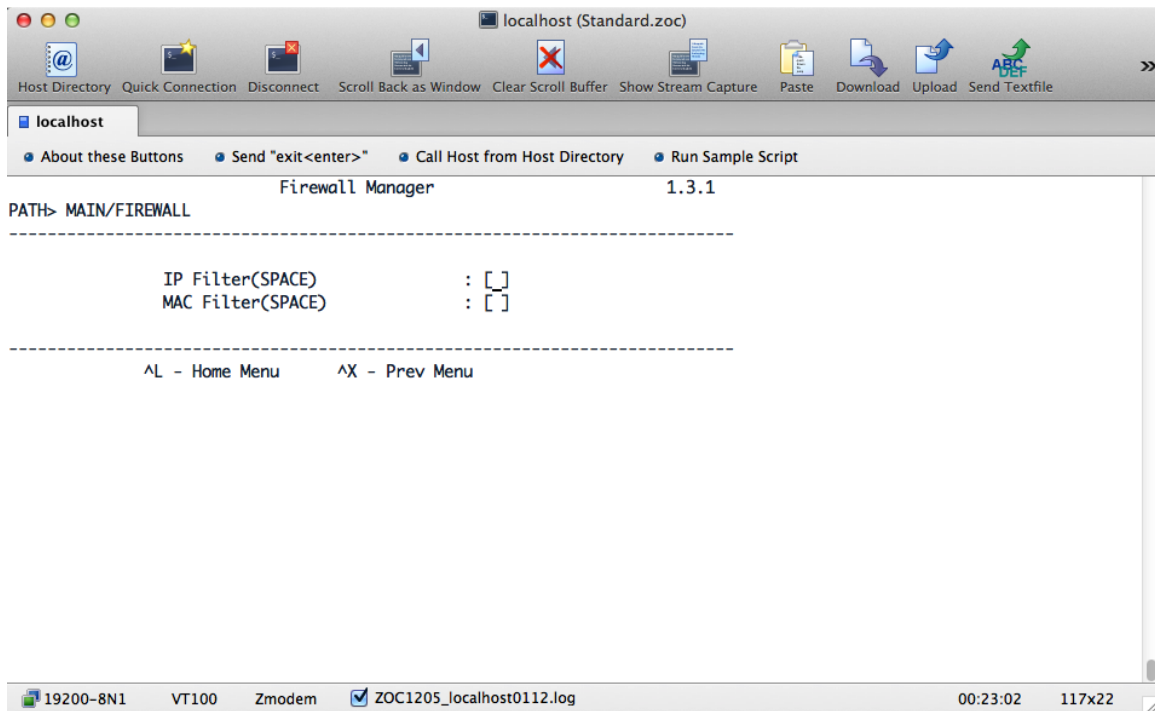

After selecting "Account" from the main menu, press → or ^D to enter System Preferences setting; this

setting is modifying the system administrator password.

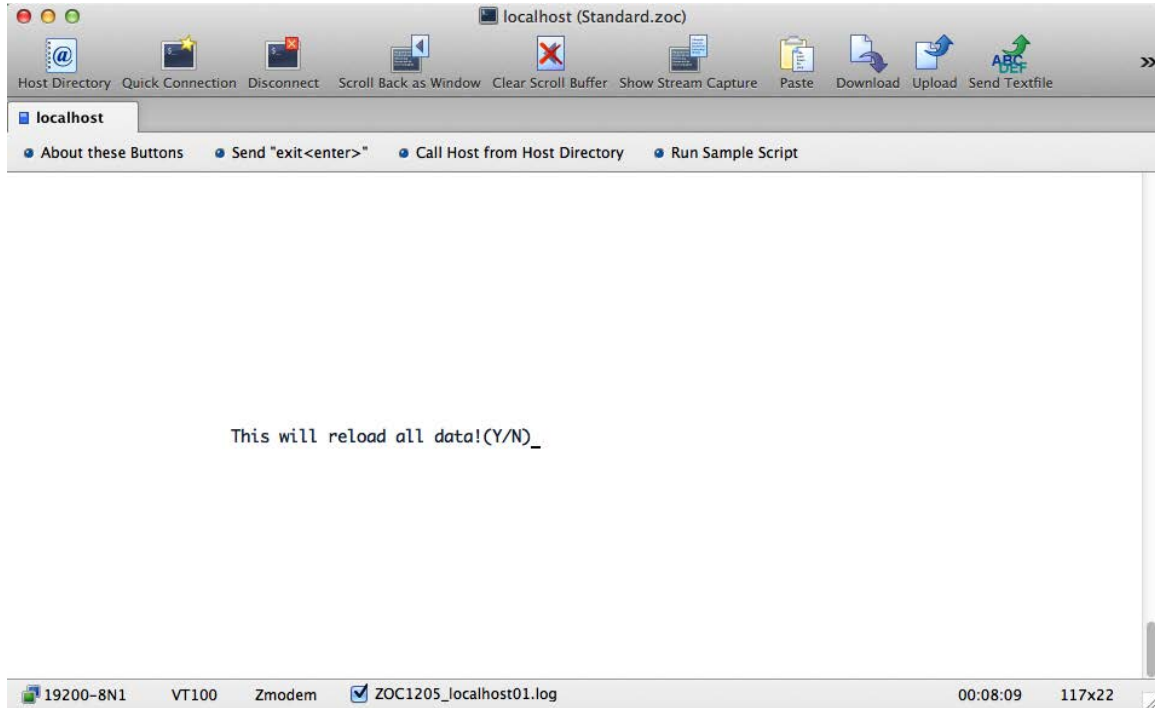

5.4 Firewall Preference

After selecting "Firewall" from the main menu, press → or ^D to enter System Preferences setting.

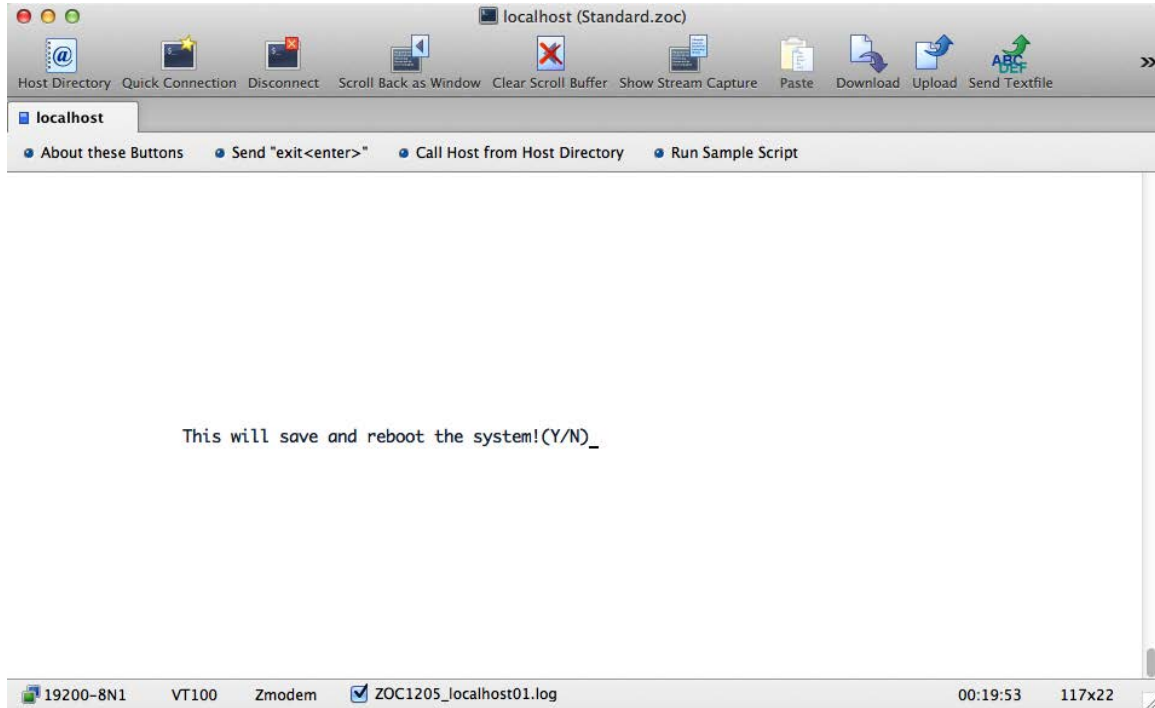

5.5 RELOAD Preference

After selecting "RELOAD" from the main menu, press → or ^D to enter the query windows to reload all data; if yes, press "Y", then the device will reload network, user and firewall data, and the data revised on the terminal before canceling.

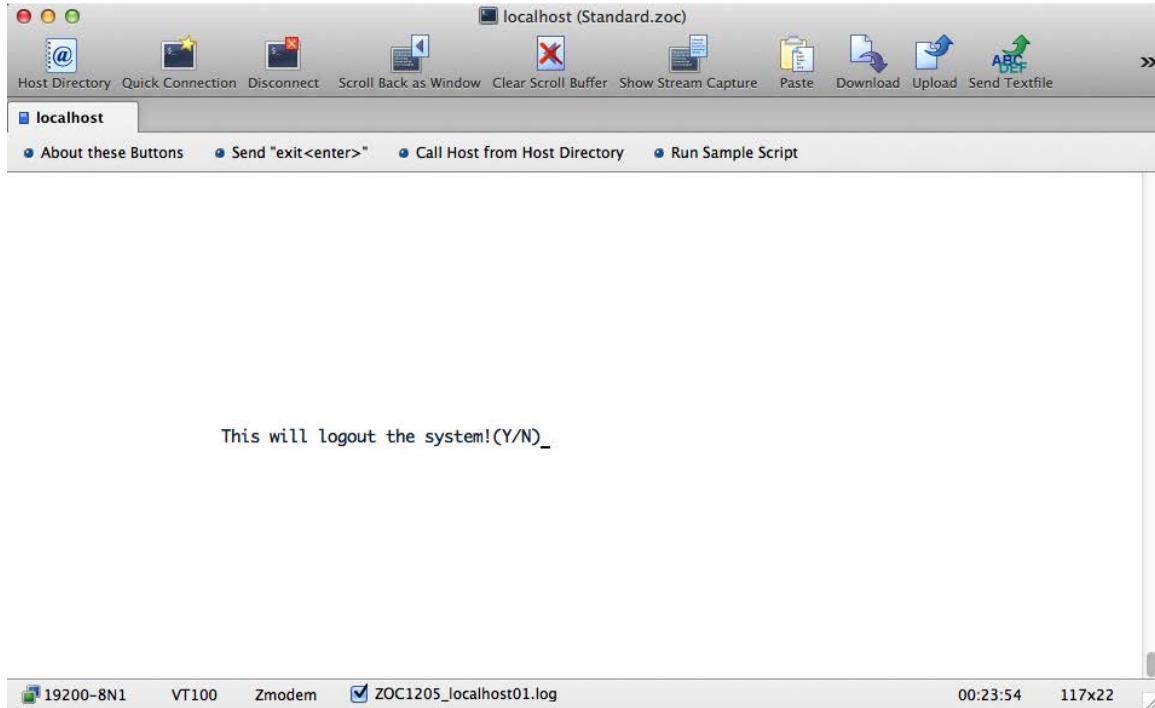

5.6 Parameter Saving

After selecting "SAVE" from the main menu, press → or ^D to enter the query windows to save and reboot the device; if yes, press "Y", then the device will save the revised data and reboot.

5.7 Logout

After selecting "LOGOUT" from the main menu, press → or ^D to enter the query windows; if press "Y" , then the terminal program will be logged out and the sign-in menu will be displayed.

Appendix A: Resetting to Default via Reset Button

Users who forget the network account and password of the product can press "Reset" to recover to the factory default values, and the device will reboot at the same time.

Step 1. Press and hold "RESET" for more than 3 seconds. When LED starts flashing, release the hold. You are then asked fill out the admin account and password as **admin** (add a new account if no admin account). Device IP will be automatically acquired through DHCP (if there is no DHCP server, the device IP should be preset as **192.168.0.10**). The acquired IP is displayed on the LCD panel.

Step 2. Press and hold RESET for more than 10 seconds. When LED is on, release "RESET" to clear all the data of the device.

Default DHCP Client	On
Default IP Address	192.168.0.10 – if no DHCP existed in the network
Default Port	80
Default Login User Name	Set itself
Default Login Password	Set itself
Search Tools	ip_search

Appendix B: HTTP Message API Example

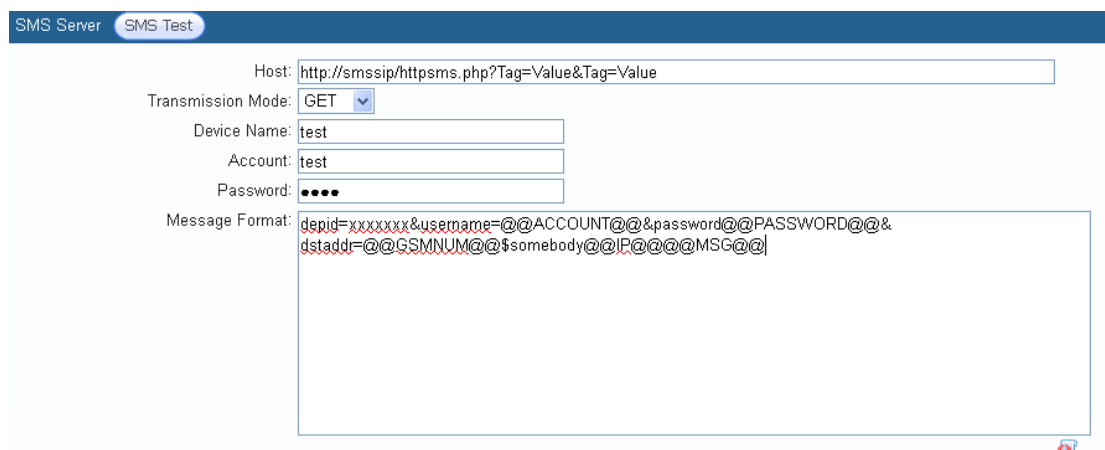

A Message API example of a message service provider is given below. The transmission mode is Get in TTP protocol, and the URL format is as follows:

http://SMLWsip/httpSMLWs.php?Tag=Value&Tag=Value&Tag=Value...

Tag variable list:

Required	Optional Tag	Description
Required	depid	Company Code
Required	username	User's Account
Required	password	User's password
Required	dstaddr	Objective gate number (Separated by commas for delivery to multiple gate numbers, repeated gate number is not accepted during each delivery.)
Required	IPMbody	Message content, using standard URL encoding

Transform the above format into message server parameters, and the menu is shown as follows:

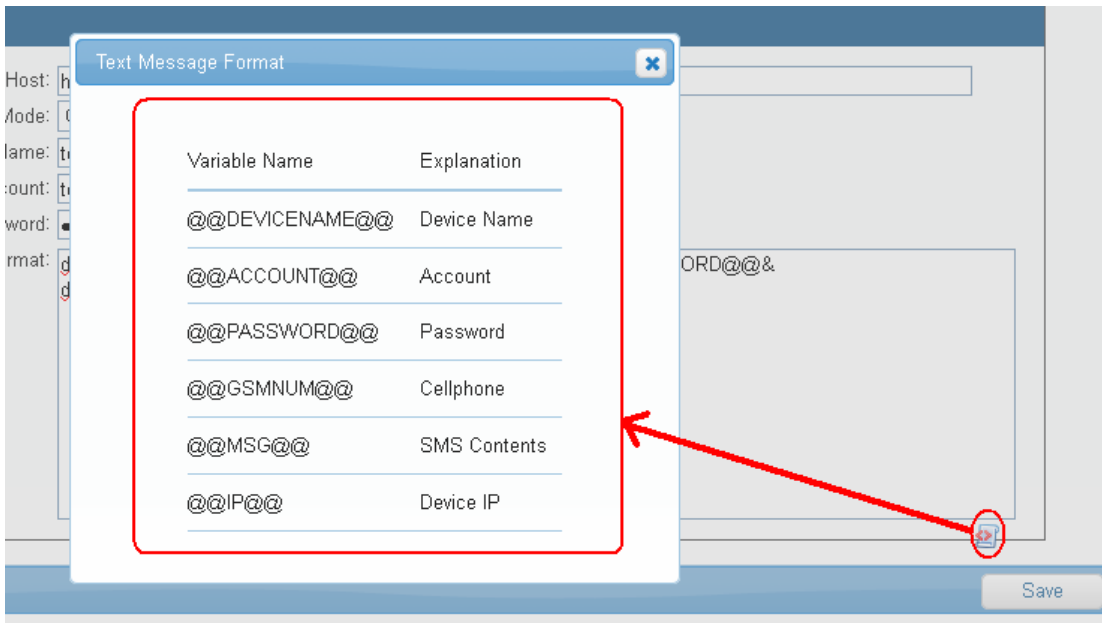

The screenshot shows the 'SMS Test' configuration window. It includes the following fields:

- Host:** `http://smssip/httpsms.php?Tag=Value&Tag=Value`
- Transmission Mode:** GET (dropdown menu)
- Device Name:** test
- Account:** test
- Password:** masked with four dots
- Message Format:** `depid=xxxxxx&username=@@ACCOUNT@@&password@@PASSWORD@@&dstaddr=@@GSMNUM@@$somebody@@IP@@@MSG@@`

After message server setup is completed, press "Message Test" first to check if message can be sent normally.

Press the icon on the right side of the screen to see message format as a reference.

Parameters	Description
@@DEVICENAME@@	The device name will show when sending a message.
@@ACCOUNT@@	The account will send the message.
@@PASSWORD@@	The password will send the message.
@@GSMNUM@@	The number will send the message.
@@MSG@@	Message content will show when sending a message.
@@IP@@	Device IP will show when sending a message.

Message Format Explanation:

depid=xxxxxx&username=@@ACCOUNT@@&password=@@PASSWORD@@&dstaddr=@@GSMNUM@@&IPMbody=@@IP@@,@@MSG@@

If you fill out the above info in the Message Format, the system would automatically show the following info:

Message format	Description
Company code (depid=xxxxxx) &	Required
User's Account (account=@@ACCOUNT@@)&	Required
User's password (password=@@PASSWORD@@)&	Required
Cellphone number (dstaddr=@@GSMLWNUM@@)&	Required
Device IP & Message content (IPMbody=@@IP@@,@@MSG@@)	This format is changeable with the content.
