FCC Warning

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the Instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

CE Mark Warning

This equipment is compliant with Class A of CISPR 32. In a residential environment this equipment may cause radio interference.

Energy Saving Note of the Device

This power required device does not support Standby mode operation. For energy saving, please remove the power cable to disconnect the device from the power circuit. In view of saving the energy and reducing the unnecessary power consumption, it is strongly suggested to remove the power connection for the device if this device is not intended to be active.

WEEE Warning

To avoid the potential effects on the environment and human health as a result of the presence of hazardous substances in electrical and electronic equipment, end users of electrical and electronic equipment should understand the meaning of the crossed-out wheeled bin symbol. Do not dispose of WEEE as unsorted municipal waste and have to collect such WEEE separately.

Revision

User's Manual of PLANET XT-900 Series

Models: XT-905A, XT-915A, XT-925A

Revision: 1.0 (July, 2023)

Part No: EM-XT-900 series_v1.0

1. INTRODUCTION

The descriptions of PLANET 10Gbps Managed Media Converters are as follows:

| | |
|----------------|--|
| XT-905A | 1-Port 10G/5G/2.5G/1G/100BASE-T + 1-Port 10G/1GBASE-X SFP+ 10G Managed Media Converter |
| XT-915A | 2-Port 10G/1GBASE-X SFP+ 10G Managed Media Converter |
| XT-925A | 1-Port 10G/5G/2.5G/1G/100BASE-T + 2-Port 10G/1GBASE-X SFP+ 10G Managed Media Converter |

“10G Managed Media Converter” is used as an alternative name for the above models in this user's manual.

1.1 Packet Contents

Open the box of the 10G Managed Media Converter and carefully unpack it. The box should contain the following items:

| Model Number | XT-905A | XT-915A | XT-925A |
|---------------------------|---------|---------|---------|
| Contents | | | |
| The Media Converter | ■ | ■ | ■ |
| Quick Start Guide Sheet | ■ | ■ | ■ |
| DC 12V/1.5A Power Adapter | ■ | ■ | ■ |
| SFP Dust Cap | 1 | 2 | 2 |

If any of these are missing or damaged, please contact your dealer immediately; if possible, retain the carton including the original packing material, and use them again to repack the product in case there is a need to return it to us for repair.

1.2 Product Description

Ultra-fast Connections and Secure Management

PLANET XT-925A high-performance media converter improves network connectivity and provides sophisticated management capabilities. It is **the first 10G media converter** in the industry with **standalone secure management**, making it **the best option for enterprise and telecom remote management and monitoring**. The XT-925A allows for remote management via an intuitive web interface, command line interface (CLI) and SNMP protocol, enabling easy monitoring and configuration of the converter from anywhere.

Our cutting-edge converter features one 10GBASE-T copper port and two 10G SFP+ ports, integrating the power of 10G connectivity with the versatility of fiber and copper ports. This powerful yet compact solution makes it the ideal choice for businesses looking to boost their network speed and functionality.

10GBASE-T and 10GBASE-X SFP Dual Media Interfaces for Diversified Bandwidth Applications

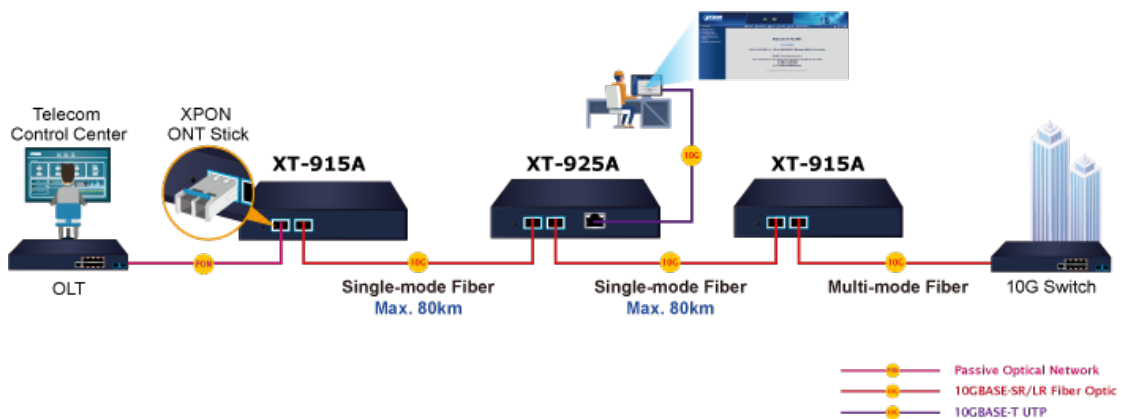

The XT-925A can reach speeds of up to 10Gbps over copper or fiber-optic cabling, greatly improving the performance of large data transmissions. Its built-in 10GBASE-T copper interfaces feature 5-speed auto-negotiation (10G/5G/2.5G/1G/100) and can transmit data at 10Gbps over the existing Cat6A/Cat7 UTP cabling, eliminating the need for expensive upgrades. With its Plug and Play design, installation is easy and hassle-free, so you can enjoy the speed you need without any extra effort.

The fiber-optic 10GBASE-X SFP+ interfaces support 4 speeds, 10GBASE-SR/LR, 2500BASE-X, 1000BASE-SX/LX and 100BASE-FX, meaning the administrator now can flexibly choose the suitable SFP/SFP+ transceiver according to the transmission distance or the transmission speed required to extend the network efficiently.

Two Fiber Optic Ports Double the Distance of Deployment (Apply to XT-915A and XT-925A)

Conventional media converters typically support only a single pair of different media conversions, such as converting one fiber to one copper connection. They can extend a 100m copper connection to a maximum of 120km fiber optic connection. In contrast, the XT-925A has two fiber optic ports and one copper port, enabling the two fiber optic cables to connect to devices up to 240km apart so as to significantly extend the deployment distance.

Link Fault Pass-through

Link Fault Pass-through is a networking feature. It facilitates the detection and propagation of link faults or errors from one network device to another. It helps maintain network reliability and minimizes downtime by allowing devices to dynamically respond to link faults. Link Fault Pass-through improves fault detection and enables faster troubleshooting and resolution processes.

How it works:

- When a link fault occurs, the device experiencing the fault generates a notification.
- This notification is then forwarded to other connected devices using Link Fault Pass-through.
- Upon receiving the link fault information, the connected devices become aware of the fault.
- This awareness enables them to take appropriate actions, such as rerouting traffic or disabling the affected port.

Remote Link Normal (Copper to Fiber Pair)

Network with Cybersecurity Helps Minimize Risks

The XT-925A is equipped with enhanced cybersecurity features to fend off cyber threats and attacks. It supports SSHv2, TLSv1.2, and SNMPv3 protocols to provide strong protection against advanced threats. To safely transmit critical data to colleagues or customers via fiber optic cabling, the XT-925A's cybersecurity feature protects network management and enhances the security of mission-critical networks without incurring any additional deployment cost or effort.

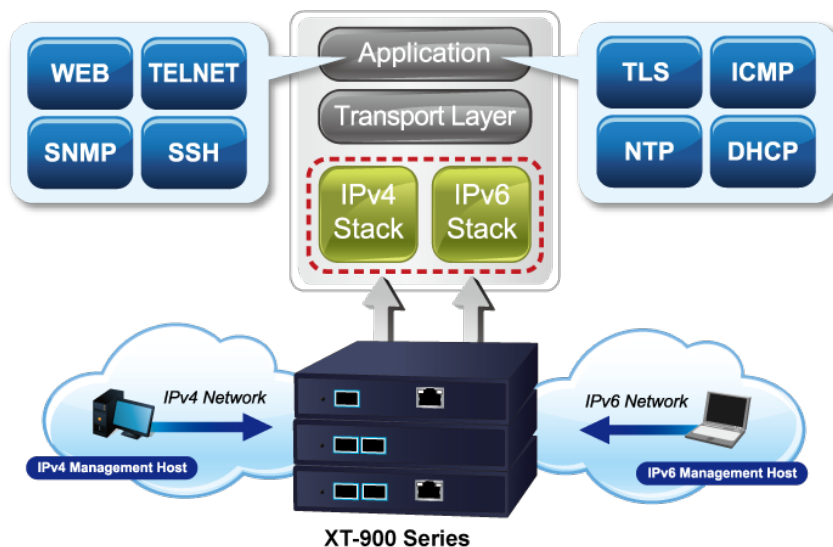

Redundant Ring, Fast Recovery for Critical Network Applications

The XT-925A supports software-based redundant ring technology and features strong, rapid self-recovery capability to prevent interruption and external intrusions. It incorporates advanced ITU-T G.8032 ERPS (Ethernet Ring Protection Media convertering) technology, ensuring rapid self-recovery in ring networks. With this advanced feature, the data link recovery time can be as fast as 500ms.

IPv6/IPv4 Dual Stack Management

Supporting both IPv6 and IPv4 protocols, the XT-925A helps the enterprises and telecoms to step in the IPv6 era with the lowest investment as their network facilities need not be replaced or overhauled if the IPv6 FTTx edge network is set up.

SNMP for Comprehensive Network Monitoring and Centralized Control

SNMP (Simple Network Management Protocol) provides network monitoring and management capabilities by gathering real-time information about network devices. By proactively identifying and addressing network issues, reliability and performance are improved. SNMP also facilitates centralized control of network devices, allowing for monitoring and configuration of multiple devices from a single location, reducing manual effort and enhancing operational efficiency.

Layer 2 Features

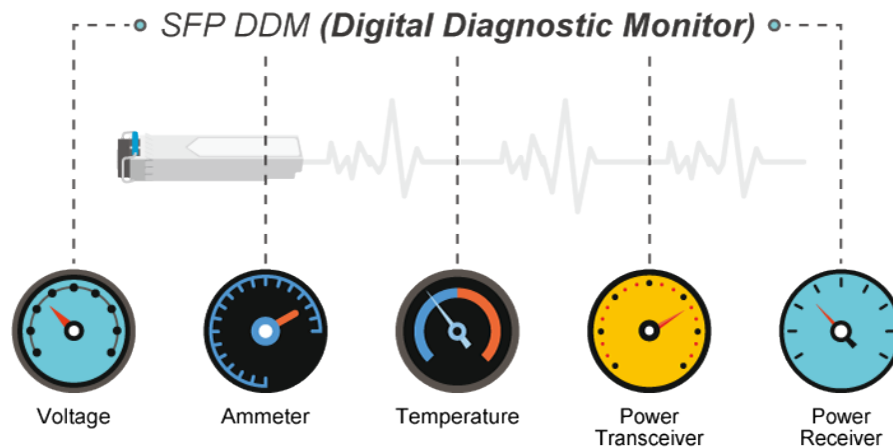

The device has a 16K-entry MAC address table that automatically removes inactive addresses. Its backbone supports speeds of up to 60Gbps, and it can handle Jumbo Frames up to 1.2K in size. The device is equipped with Storm Control to manage Broadcast/Multicast/Unknown Unicast traffic to prevent excessive network flooding.

Efficient Traffic Control

The XT-925A media converter boasts advanced QoS features and robust traffic management capabilities, optimizing the delivery of business-class data, voice, and video solutions. Its feature set includes broadcast/multicast/unicast storm control, per-port bandwidth control, and 802.1p CoS/DSCP/IP Precedence QoS priority and remarking. These capabilities guarantee optimal performance for VoIP and video stream transmission, maximizing the utilization of limited network resources for enterprises

Intelligent SFP Diagnosis Mechanism

The XT-925A supports the SFP-DDM (digital diagnostic monitor) function, which greatly helps network administrators easily monitor real-time parameters of the SFP transceivers. These parameters include optical output power, optical input power, temperature, laser bias current, and transceiver supply voltage.

Remote Management Solution

PLANET's Universal Network Management System (UNI-NMS) and CloudViewer app support IT staff in remotely managing all network devices and monitoring the operation statuses of the XT-925A. These systems are designed for both enterprises and industries where the deployments of the XT-925A can be remote. This allows for bugs or faulty conditions to be found without having to go to the actual location. With UNI-NMS or CloudViewer app, all kinds of businesses can now be speedily and efficiently managed from one platform.

1.3 How to Use This Manual

This User's Manual is structured as follows:

Section 2, INSTALLATION

The section explains the functions of the **10G Media Converter** and how to physically install the **Industrial Media Converter**.

Section 3, MEDIA CONVERTER MANAGEMENT

The section contains the information about the software function of the **Industrial Media Converter**.

Section 4, WEB CONFIGURATION

The section explains how to manage the **10G Media Converter** by Web interface.

Section 5, MEDIA CONVERTER OPERATION

The chapter explains how to do the media converter operation of the **Industrial Media Converter**.

Section 6, TROUBLESHOOTING

The chapter explains how to do troubleshooting of the **Industrial Media Converter**.

Appendix A

The section contains cable information of the **Industrial Media Converter**.

Appendix B

The section contains glossary information of the **Industrial Media Converter**.

1.4 Product Features

Physical Port

- One 10G/5G/2.5G/1G/100BASE-T RJ45 interface with auto MDI/MDI-X function
- Two 10G/2.5G/1G/100BASE-X SFP+ interfaces

Layer 2 Features

- Storm Control support
 - Broadcast / Multicast / Unknown Unicast
- Supports VLAN
 - IEEE 802.1Q tagged VLAN
 - Supports provider bridging (VLAN Q-in-Q, IEEE 802.1ad)
 - Up to 256 VLAN groups, out of 4096 VLAN IDs
- Supports ITU-T G.8032 ERPS ring with recovery time less than 500ms (software-based)
- Link Layer Discovery Protocol (LLDP)
- 16K MAC address table with auto-aging
- Jumbo Frame support up to 12K in size

Quality of Service

- Ingress Shaper and Egress Rate Limit per port bandwidth control
- 8 priority queues on all converter ports
- Strict priority and Weighted Round Robin (WRR) CoS policies
- Traffic classification
 - IEEE 802.1p CoS
 - IP TOS / DSCP / IP Precedence
 - IP TCP/UDP port number
 - Typical network application

Management

- IPv4 and IPv6 dual stack management
- Support Link Fault Pass-through
- Management Interfaces
 - Web HTTP/HTTPS management
 - Telnet Command Line Interface
 - SNMP v1, v2c, v3 monitoring
 - SSHv2, TLSv1.2
- System Maintenance
 - Firmware upload/download via HTTP
 - Reset button for system reboot or reset to factory default
 - Dual images
- Simple Network Time Protocol (SNTP)
- User privilege levels control
- SNMP Management

- SNMP trap for interface link up and link down notification
- Four RMON groups (history, statistics, alarms and events)
- Network Diagnostic
 - SFP-DDM (Digital Diagnostic Monitor)
- Syslog remote alarm
- Local system Log
- ICMPv6 / ICMPv4 remote ping
- PLANET Smart Discovery Utility for deploy management
- PLANET Remote Management
 - PLANET NMS Controller and CloudViewer app for deployment management

Security

- IP address access management to prevent unauthorized intruder
- Static MAC setting and MAC Filtering
- Protected ports (XT-925A only)

Case and Installation

- External 12VDC, 1.5A power adapter
- 0 to 50 degrees C operating temperature
- Supports 4KVDC Contact/8KVDC Air Ethernet ESD protection
- Wall-mount and DIN-rail installation (optional)

1.5 Product Specifications

| Model | XT-905A | XT-915A | XT-925A |
|---------------------------------------|---|--|--|
| Hardware Specifications | | | |
| Copper Interface | 1x 10G/5G/2.5G/1G/100BASE-T RJ45 interface with auto MDI/MDI-X function | - | 1x 10G/5G/2.5G/1G/100BASE-T RJ45 interface with auto MDI/MDI-X function |
| Fiber Interface | 1x 10G/2.5G/1G/100BASE-X SFP+ interface | 2x 10G/2.5G/1G/100BASE-X SFP+ interface | 2x 10G/2.5G/1G/100BASE-X SFP+ interface |
| Reset Button | < 5 sec.: System reboot > 5 sec.: Factory default | | |
| ESD Protection | 4KVDC Contact / 8KVDC Air | | |
| Enclosure | Compact-sized metal case | | |
| Installation | Wall-mount kit and DIN-rail kit installation (optional) | | |
| Dimensions (W x D x H) | 135 x 87.8 x 20mm | | |
| Weight | 429g (device only) | 407g (device only) | 437g (device only) |
| Power Requirement | DC 12V, 1.5A, external power adapter | | |
| Power Consumption (XT-925A) | 3.24 watts/11.06 BTU/hr (No loading) / 12.5 watts/42.65 BTU/hr (Full loading) | | |
| LED Indicator | System: PWR, (Green) Per 10GBASE-T RJ45 Port: 1G/100 LINK/ACT (Green) 2.5G/5G LINK/ACT (Green) 10G LINK/ACT (Amber) Per 10GBASE-X SFP+ Port: 1G LINK/ACT (Green) 2.5G LINK/ACT (Green) 10G LINK/ACT (Amber) | | |
| Transmission Specifications | | | |
| Processing Scheme | Store and Forward | | |
| Fabric | 40Gbps | 40Gbps | 60Gbps |
| Throughput (packet per second) | 29.76Mpps@64bytes | | |
| Address Table | 16K entries, automatic source address learning and aging | | |
| Flow Control | Back pressure for half duplex IEEE 802.3x pause frame for full duplex | | |
| Jumbo Frame | 12K | | |
| Shared Buffer | 12Mbits | | |
| Layer 2 Function | | | |
| Port Configuration | Port disable/enable Auto-negotiation 100Mbps, 1/2.5/5/10Gbps full and half duplex mode selection Flow control disable/enable | | |
| Port Status | Display each port's link status, speed, Auto-negotiation status, duplex mode, flow control status | | |

| | |
|-------------------------------------|---|
| VLAN | IEEE 802.1Q tag-based VLAN IEEE 802.1ad Q-in-Q tunneling Up to 256 VLAN groups, out of 4096 VLAN IDs |
| Bandwidth Control | Per port bandwidth control Ingress: 16~10,000,000Kbps Egress: 16~10,000,000Kbps |
| QoS | Traffic classification based, strict priority and WRR 8-level priority for media convertering Traffic classification: - Cos/802.1p - DSCP - IP Precedence |
| Ring | Supports ERPS, and complies with ITU-T G.8032 Recovery time < 450ms |
| Security Function | |
| Access Security | Remote management protocols support: SSH, Telnet, HTTP and HTTPs Protected ports (XT-925A only) |
| System Management | |
| Basic Management Interfaces | Telnet, Web browser, SNMP v1, v2c |
| Secure Management Interfaces | SSHv2, TLS v1.2, SNMP v3 |
| System Management | Firmware upgrade by HTTP protocol through Ethernet network Configuration upload/download through HTTP LLDP protocol SNTP PLANET Smart Discovery Utility PLANET NMS Controller and PLANET CloudViewer mobile app |

2. INSTALLATION

2.1 Hardware Description

The 10G Media Converter supports multiple running speeds, including 100Mbps, 1Gb/s, 2.5Gb/s, and 10Gb/s, and can automatically distinguish the speed of the incoming connection.

This section provides an overview of the hardware features of the 10G Media Converter. To facilitate management and control of the device, it is important to familiarize yourself with its display indicators and ports. The front panel illustrations provided in this chapter show the unit's LED indicators. Before connecting any network device to the 10G Media Converter, be sure to read this chapter carefully.

2.1.1 Physical Dimensions

Unit: mm

2.1.2 Front Panel

XT-905A

XT-915A

XT-925A

Reset Button

■ 10G TP Interface

100/1000/2500/5000/10000BASE-T Copper, RJ45 Twisted-pair: Up to 100 meters.

■ SFP+ Slot

100/1000/2500/10000BASE-X mini-GBIC slot, SFP+ (Small-form Factor Pluggable) transceiver module: From 550 meters to 2km (multi-mode fiber) and to 10/20/30/40/50/70/120 kilometers (single-mode fiber). **Note:** the max. distance for operating at 10G is 80km.

■ Reset Button

On the left side of the front panel, the reset button is designed for rebooting the 10G Media Converter without turning off and on the power. The following is the summary table of reset button functions:

| Reset Button Pressed and Released | Function |
|-----------------------------------|---|
| < 5 sec: System Reboot | Reboot the 10G Media Converter. |
| > 5 sec: Factory Default | Reset the 10G Media Converter to Factory Default configuration. The 10G Media Converter will then reboot and load the default settings as shown below: <ul style="list-style-type: none"> ◦ Default Username: admin ◦ Default Password: admin ◦ Default IP address: 192.168.0.100 ◦ Subnet mask: 255.255.255.0 ◦ Default Gateway: 192.168.0.254 |

2.1.3 LED Indications

LED Definition:

■ System and Power

| LED | Color | Function | |
|-----|-------|----------|-----------|
| PWR | Green | Lit | Power ON |
| | | Off | Power OFF |

■ Per 10GBASE-T RJ45 Interface

| LED | Color | Function | |
|---------|-------|----------|--|
| 1G/100 | Green | Lit: | To indicate the link through TP port is successfully established at 1Gbps or 100Mbps. |
| | | Blink | To indicate that the media converter is actively sending or receiving data over that port. |
| 10G | Amber | Lit: | To indicate the link through TP port is successfully established at 10Gbps. |
| | | Blink | To indicate that the media converter is actively sending or receiving data over that port. |
| 2.5G/5G | Green | Lit: | To indicate that the port is operating at 5Gbps or 2.5Gbps. |
| | | Blink | To indicate that the media converter is actively sending or receiving data over that port. |

■ Per 10GBASE-X SFP+ Interface

| LED | Color | Function | |
|--------------------|-------|----------|--|
| 1G/2.5G LNK/ACT | Green | Lit: | To indicate the port is running at 1G/2.5Gbps and successfully established. |
| | | Blink | To indicate that the Media converter is actively sending or receiving data over that port. |
| 10G LNK/ACT | Amber | Lit: | To indicate the port is running at 10Gbps and successfully established. |
| | | Blink | To indicate that the media converter is actively sending or receiving data over that port. |

2.2 Installing the Industrial Media Converter

This section describes how to install your **10G Media Converter** and make connections to the **Industrial Media Converter**. Please read the following topics and perform the procedures in the order being presented. To install your **10G Media Converter** on a desktop or shelf, simply complete the following steps.

In this paragraph, we will describe how to install the **10G Media Converter** and the installation points attended to it.

2.2.1 Installation Steps

1. **Unpack the 10G Media Converter**
2. If users want to wall-mount the **10G Media Converter**, please refer to the **Wall Mount Plate Mounting** section for wall-mount plate installation.
3. **Hang the 10G Media Converter on the wall.**
4. **Power on the 10G Media Converter.** Please refer to the **Wiring the Power Inputs** section to get the information about how to wire the power. The power LED on the **10G Media Converter** will light up. Please refer to the **LED Indicators** section for indication of LED lights.
5. **Prepare the twisted-pair, straight-through Category 5 cable for Ethernet connection.**
6. **Insert one side of RJ45 cable (category 5) into the 10G Media Converter's Ethernet port** (RJ45 port) while the other side to the network device's Ethernet port (RJ45 port), e.g., media converter PC or server. The UTP port (RJ45) LED on the **10G Media Converter** will light up when the cable is connected with the network device. Please refer to the **LED Indicators** section for LED light indication.

Make sure that the connected network devices support MDI/MDI-X. If it does not support, use the crossover Category 5 cable.

7. **When all connections are set and all LED lights show normal, the installation is completed.**

2.2.2 Wall Mount Plate Mounting

To install the **10G Media Converter** on the wall, please follow the instructions below.

Step 1: Place the wall-mount plate on the rear panel of the **10G Media Converter**.

Step 2: Use the screwdriver to screw the wall mount plate on the **10G Media Converter**.

Step 3: Use the hook holes at the corners of the wall mount plate to hang the **10G Media Converter** on the wall.

Step 4: To remove the wall mount plate, reverse the steps above.

2.3 Cabling

■ 100/1000/2500/5000/10000BASE-T

The RJ-45 copper port comes with auto-negotiation capability. They automatically support 100BASE-T, 1000BASE-T, 2.5GBASE-T, 5GBASE-T and 10GBASE-T networks. Users only need to plug a working network device into the copper port, and then turn on the **10G Media Converter**. The port will automatically run at 100Mbps, 1000Mbps, 2500Mbps, 5000Mbps or 10Gbps after negotiating with the connected device.

■ 100/1000/2500/10000BASE-X

The **10G Media Converter** has 1 or 2 SFP+ interfaces that support 100/1000/2500/10000Mbps dual speed mode.

■ Cabling

The **100/1000/2500/5000/10000BASE-T** port uses an RJ45 socket -- similar to phone jacks -- for connection of unshielded twisted-pair cable (UTP). The IEEE 802.3ab Gigabit Ethernet standard mandates the use of 5/5e/6 UTP for 1000BASE-T (refer to the table below). Maximum distance is 100 meters (328 feet). The 100/1000/2500/10000BASE-X SFP+ slot uses an LC connector with optional SFP module. Please see table below and know more about the cable specifications.

| Port Type | Cable Type | Connector |
|----------------|---|------------------------|
| 100BASE-TX | Cat5 UTP, 2-pair | RJ45 |
| 1000BASE-T | Cat5/5e/6 UTP, 2-pair | RJ45 |
| 10GbASE-T | Cat6A or Cat7 | RJ45 |
| 100BASE-FX | 50/125µm or 62.5/125µm multi-mode 9/125µm single-mode | LC (multi/single mode) |
| 1000BASE-SX/LX | 50/125µm or 62.5/125µm multi-mode 9/125µm single-mode | LC (multi/single mode) |
| 10GBASE-SR/LR | 50/125µm or 62.5/125µm multi-mode 9/125µm single-mode | LC (multi/single mode) |

Any Ethernet devices like hubs and PCs can connect to the **10G Media Converter** by using straight-through wires. The **100/1000/2500/5000/10000BASE-T** ports are auto-MDI/MDI-X and can be used on straight-through or crossover cable.

2.3.1 Installing the SFP Transceiver

The sections describe how to insert an SFP/SFP+ transceiver into an SFP/SFP+ slot. The SFP/SFP+ transceivers are hot-pluggable and hot-swappable. You can plug in and out the transceiver to/from any SFP/SFP+ port without having to power down the **10G Managed Media Converter** as follows.

■ **Approved PLANET SFP/SFP+ Transceivers**

PLANET **10G Managed Media Converter** supports both single mode and multi-mode SFP transceivers. The following list of approved PLANET SFP/SFP+ transceivers is correct at the time of publication:

10 Gigabit Ethernet Transceiver (10GBASE-X SFP+)

| Model | Speed (Mbps) | Connector Interface | Fiber Mode | Distance | Wavelength (nm) | Operating Temp. |
|--------|--------------|---------------------|-------------|----------|-----------------|------------------|
| MTB-SR | 10G | LC | Multi Mode | 300m | 850nm | 0 ~ 60 degrees C |
| MTB-LR | 10G | LC | Single Mode | 10km | 1310nm | 0 ~ 60 degrees C |

10 Gigabit Ethernet Transceiver (10GBASE-BX, Single Fiber Bi-directional SFP+)

| Model | Speed (Mbps) | Connector Interface | Fiber Mode | Distance | Wavelength (TX) | Wavelength (RX) | Operating Temp. |
|----------|--------------|---------------------|-------------|----------|-----------------|-----------------|------------------|
| MTB-LA20 | 10G | WDM (LC) | Single Mode | 20km | 1270nm | 1330nm | 0 ~ 60 degrees C |
| MTB-LB20 | 10G | WDM (LC) | Single Mode | 20km | 1330nm | 1270nm | 0 ~ 60 degrees C |
| MTB-LA40 | 10G | WDM (LC) | Single Mode | 40km | 1270nm | 1330nm | 0 ~ 60 degrees C |
| MTB-LB40 | 10G | WDM (LC) | Single Mode | 40km | 1330nm | 1270nm | 0 ~ 60 degrees C |
| MTB-LA60 | 10G | WDM (LC) | Single Mode | 60km | 1270nm | 1330nm | 0 ~ 60 degrees C |
| MTB-LB60 | 10G | WDM (LC) | Single Mode | 60km | 1330nm | 1270nm | 0 ~ 60 degrees C |

2.5 Gigabit Ethernet Transceiver (2500BASE-X SFP)

| Model | Speed (Mbps) | Connector Interface | Fiber Mode | Distance | Wavelength (nm) | Operating Temp. |
|------------|--------------|---------------------|-------------|----------|--------------------------|------------------|
| MGB-2GSR | 2488 | LC | Multi Mode | 300m | 850nm | 0 ~ 60 degrees C |
| MGB-2GLR2 | 2488 | LC | Single Mode | 2km | 1310nm | 0 ~ 60 degrees C |
| MGB-2GLR20 | 2488 | LC | Single Mode | 20km | 1310nm | 0 ~ 60 degrees C |
| MGB-2GLA20 | 2488 | LC | Single Mode | 20km | TX: 1310nm RX: 1550nm | 0 ~ 60 degrees C |
| MGB-2GLB20 | 2488 | LC | Single Mode | 20km | TX: 1550nm RX:1310nm | 0 ~ 60 degrees C |

Gigabit Ethernet Transceiver (1000BASE-X SFP)

| Model | Speed (Mbps) | Connector Interface | Fiber Mode | Distance | Wavelength (nm) | Operating Temp. |
|---------|--------------|---------------------|-------------|----------|-----------------|------------------|
| MGB-GT | 1000 | Copper | -- | 100m | -- | 0 ~ 60 degrees C |
| MGB-SX | 1000 | LC | Multi Mode | 550m | 850nm | 0 ~ 60 degrees C |
| MGB-SX2 | 1000 | LC | Multi Mode | 2km | 1310nm | 0 ~ 60 degrees C |
| MGB-LX | 1000 | LC | Single Mode | 20km | 1310nm | 0 ~ 60 degrees C |
| MGB-L40 | 1000 | LC | Single Mode | 40km | 1550nm | 0 ~ 60 degrees C |
| MGB-L80 | 1000 | LC | Single Mode | 80km | 1550nm | 0 ~ 60 degrees C |

Gigabit Ethernet Transceiver (1000BASE-BX, Single Fiber Bi-directional SFP)

| Model | Speed (Mbps) | Connector Interface | Fiber Mode | Distance | Wavelength (TX) | Wavelength (RX) | Operating Temp. |
|----------|--------------|---------------------|-------------|----------|-----------------|-----------------|------------------|
| MGB-LA10 | 1000 | WDM (LC) | Single Mode | 10km | 1310nm | 1550nm | 0 ~ 60 degrees C |
| MGB-LB10 | | | | | 1550nm | 1310nm | |
| MGB-LA20 | 1000 | WDM (LC) | Single Mode | 20km | 1310nm | 1550nm | 0 ~ 60 degrees C |
| MGB-LB20 | | | | | 1550nm | 1310nm | |
| MGB-LA40 | 1000 | WDM (LC) | Single Mode | 40km | 1310nm | 1550nm | 0 ~ 60 degrees C |
| MGB-LB40 | | | | | 1550nm | 1310nm | |
| MGB-LA80 | 1000 | WDM (LC) | Single Mode | 80km | 1490nm | 1550nm | 0 ~ 60 degrees C |
| MGB-LB80 | | | | | 1550nm | 1490nm | |

1. It is recommended to use PLANET SFP on the **10G Managed Media Converter**. If you insert an SFP/SFP+ transceiver that is not supported, the **10G Managed Media Converter** will not recognize it.

1. Before we connect the 10G Managed Media Converter to the other network device, we have to make sure both sides of the SFP transceivers are with the same media type, for example: **10GBASE-SR** to **10GBASE-SR**, **10GBASE-LR** to **10GBASE-LR**.
2. Check whether the fiber-optic cable type matches with the SFP transceiver requirement.
 - To connect to 10GBASE-SR SFP+ transceiver, please use the multi-mode fiber cable with one side being the male duplex LC connector type.
 - To connect to 10GBASE-LR SFP+ transceiver, please use the single-mode fiber cable with one side being the male duplex LC connector type.
- **Connect the fiber cable**
 1. Insert the duplex LC connector into the SFP/SFP+ transceiver.
 2. Connect the other end of the cable to a device with SFP/SFP+ transceiver installed.
 3. Check the LNK/ACT LED of the SFP/SFP+ slot on the front of the 10G Managed Media Converter. Ensure that the SFP/SFP+ transceiver is operating correctly.
 4. Check the Link mode of the SFP/SFP+ port if the link fails. To function with some fiber-NICs or Media Converters, user has to set the port Link mode to “**10G FDX**”, “**1000M FDX**” or “**100M FDX**”.

2.3.2 Removing the SFP/SFP+ Transceiver

1. Make sure there is no network activity by consulting or checking with the network administrator. Or through the management interface of the media converter/converter (if available) to disable the port in advance.
2. Remove the fiber optic cable gently.
3. Turn the lever of the SFP transceiver to a horizontal position.
4. Pull out the module gently through the lever.

Never pull out the module without pulling the lever or the push bolts on the module. Directly pulling out the module with force could damage the module and SFP module slot of the device.

3. MEDIA CONVERTER MANAGEMENT

This chapter explains the methods that you can use to configure management access to the 10G Managed Media Converter. It describes the types of management applications and the communication and management protocols that deliver data between your management device (workstation or personal computer) and the system. It also contains information about port connection options.

This chapter covers the following topics:

- Requirements
- Management Access Overview
- Administration SSH Command Line
- Web Management Access
- SNMP Access
- Standards, Protocols, and Related Reading

3.1 Requirements

- **Workstations** running Windows 7/8/10/11, macOS 10.14 or later, Linux, UNIX or other platforms are compatible with **TCP/IP** protocols.
- **Workstation** is installed with **Ethernet NIC** (Network Interface Card)
- Ethernet Port connection
 - Network cables -- Use standard network (UTP) cables with RJ45 connectors.
- The Workstation above is installed with the up-to-date **Web browser**

It is recommended to use the latest version of a modern web browser, such as Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari, to access the 10G Managed Media Converter.

3.2 Management Access Overview

The 10G Managed Media Converter gives you the flexibility to access and manage it using any or all of the following methods:

- An administration **console**
- **Web browser** interface
- An external **SNMP-based network management application**

The administration console and Web browser interface support are embedded in the 10G Managed Media Converter software and are available for immediate use. Each of these management methods has their own advantages. Table 3-1 compares the three management methods.

| Method | Advantages | Disadvantages |
|-------------------------------|--|--|
| Command line Interface | <ul style="list-style-type: none"> • Text-based • Use easily acquired telnet or SSH software such as Tera Term or Putty • Secure | <ul style="list-style-type: none"> • Modem connection may prove to be unreliable or slow |
| Web Browser | <ul style="list-style-type: none"> • Ideal for configuring the media converter remotely • Compatible with all popular browsers • Can be accessed from any location • Most visually appealing | <ul style="list-style-type: none"> • Security can be compromised (hackers need only know the IP address and subnet mask) • May encounter lag times on poor connections |
| SNMP Agent | <ul style="list-style-type: none"> • Communicates with media converter functions at the MIB level • Based on open standards | <ul style="list-style-type: none"> • Requires SNMP manager software • Least visually appealing of all three methods • Some settings require calculations • Security can be compromised (hackers need only know the community name) |

Table 3-1: Comparison of Management Methods

3.3 CLI Mode Management

There are two ways for CLI mode management, remote **SSH** and **telnet**. Remote SSH and telnet are IP-based protocols, their operations are the same.

The command line user interface is for performing system administration, such as displaying statistics or changing option settings. When this method is used, you can access the 10G Managed Media Converter remote telnet interface from personal computer or workstation in the same Ethernet environment as long as you know the current IP address of the Managed Switch.

For security reason, the **SSH** and **Telnet protocol is disabled** as default setting.

3.3.1 Remote SSH Login

The 10G Managed Media Converter also supports SSHv2 for remote management. The 10G Managed Media Converter asks for user name and password for remote login when using SSHv2 client software; please use “admin” for both username and password.

Default IP address: **192.168.0.100**
 Username: **admin**
 Password: **admin**

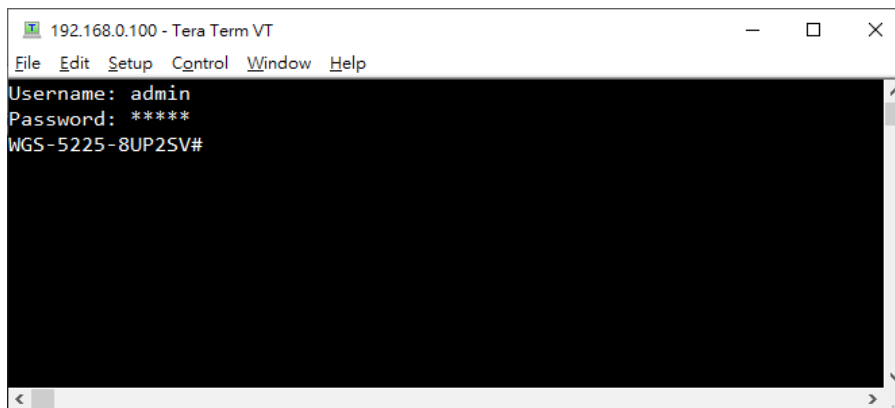

Figure 3-1: 10G Managed Media Converter SSHv2 Login Screen

The user can now enter commands to manage the 10G Managed Media Converter. For a detailed description of the commands, please refer to the following chapters.

1. For security reason, **please change and memorize the new password after this first setup.**
2. Only accept command in lowercase letter under console interface.

3.3.2 Configuring IP Address

The 10G Managed Media Converter is shipped with default IP address shown below:

```
IP Address: 192.168.0.100
Subnet Mask: 255.255.255.0
```

To check the current IP address or modify a new IP address for the 10G Managed Media Converter, please use the procedure as follows:

■ Display of the Current IP Address

1. At the “#” prompt, enter “**show ip**”.
2. The screen displays the current IP address shown in Figure 3-2.

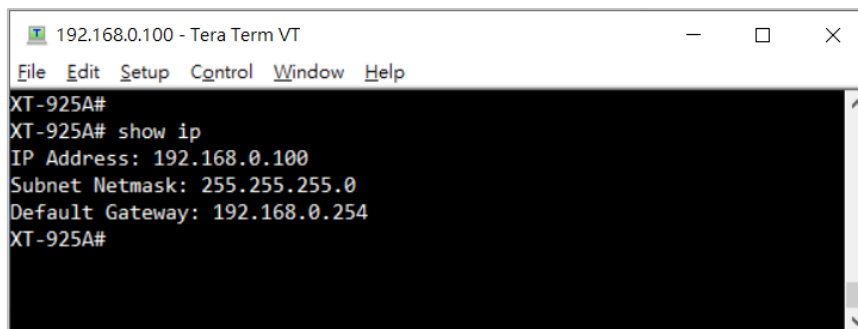

Figure 3-2: IP Information Screen

■ Configuration of the IP Address

3. At the “#” prompt, enter the following command and press **<Enter>** as shown in following.

The previous command would apply the following settings for the 10G Managed Media Converter.

```
IP Address: 192.168.1.100
Subnet Mask: 255.255.255.0
```

4. Repeat step 1 to check if the IP address has changed.

3.3.3 Storing the Current Switch Configuration

At the “#” prompt, enter the following command and press <Enter>.

```
# copy running-config startup-config
```

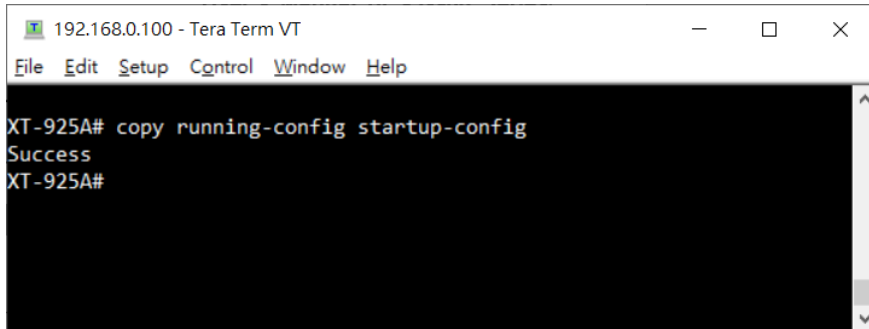

Figure 6-4: Saving Current Configuration Command Screen

If the IP is successfully configured, the 10G Managed Media Converter will apply the new IP address setting immediately. You can access the Web interface of the 10G Managed Media Converter through the new IP address.

3.4 Web Management

The 10G Managed Media Converter offers management features that allow users to manage the 10G Managed Media Converter from anywhere on the network through a standard browser such as Microsoft Internet Explorer. After you set up your IP address for the 10G Managed Media Converter, you can access the 10G Managed Media Converter's Web interface applications directly in your Web browser by entering the IP address of the 10G Managed Media Converter.

Figure 3-3: Web Management Connection

You can then use your Web browser to list and manage the 10G Managed Media Converter configuration parameters from one central location, just as if you were directly connected to the 10G Managed Media Converter's console port. Web Management requires either the latest version of a modern web browser, such as Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari,

The following web screen uses XT-925A as a representative.

Figure 3-4: Web Main Screen of 10G Managed Media Converter

3.5 SNMP-based Network Management

You can use an external SNMP-based application to configure and manage the 10G Managed Media Converter, such as SNMP Network Manager, MIB browser or What's Up Gold. This management method requires the SNMP agent on the media converter and the SNMP Network Management Station to use the **same community string**. This management method, in fact, uses two community strings: the **get community** string and the **set community** string. If the SNMP Network management Station only knows the set community string, it can read and write to the MIBs. However, if it only knows the get community string, it can only read MIBs. The default gets and sets community strings for the 10G Managed Media Converter are public.

Figure 3-5: SNMP Management

3.6 PLANET Smart Discovery Utility

For easily listing the 10G Managed Media Converter in your Ethernet environment, the Planet Smart Discovery Utility is an ideal solution. The following installation instructions are to guide you to running the Planet Smart Discovery Utility.

1. Download the PLANET Smart Discovery Utility from PLANET Official Website.
2. Deposit the Planet Smart Discovery Utility in administrator PC.
3. Run this utility as the following screen appears.

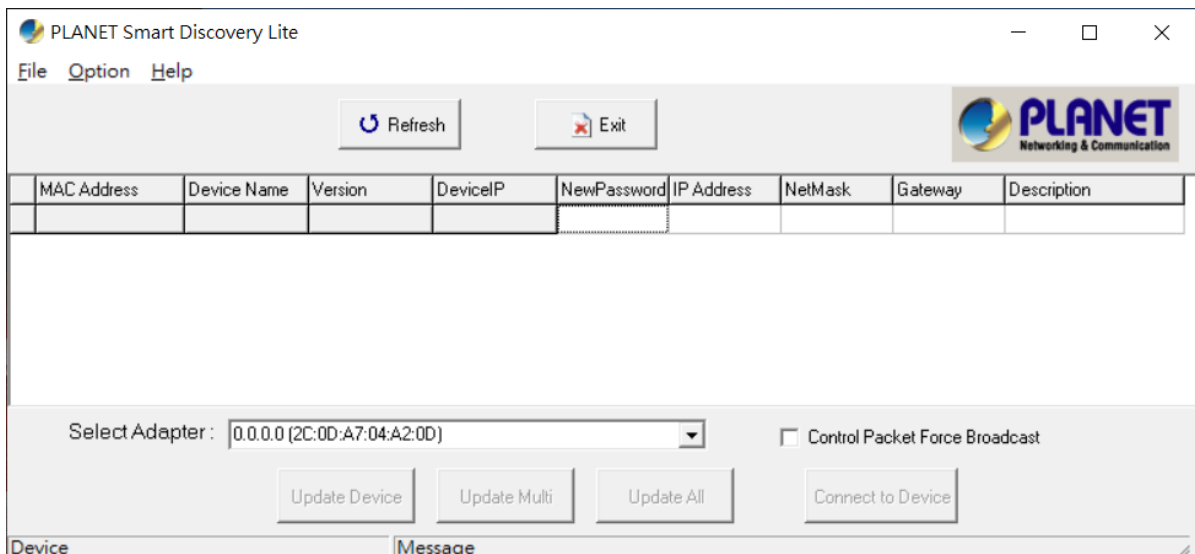

Figure 3-6: Planet Smart Discovery Utility Screen

If there are two LAN cards or above in the same administrator PC, choose a different LAN card by using the **“Select Adapter”** tool.

4. Press the **“Refresh”** button for the currently connected devices in the discovery list as the screen shows below:

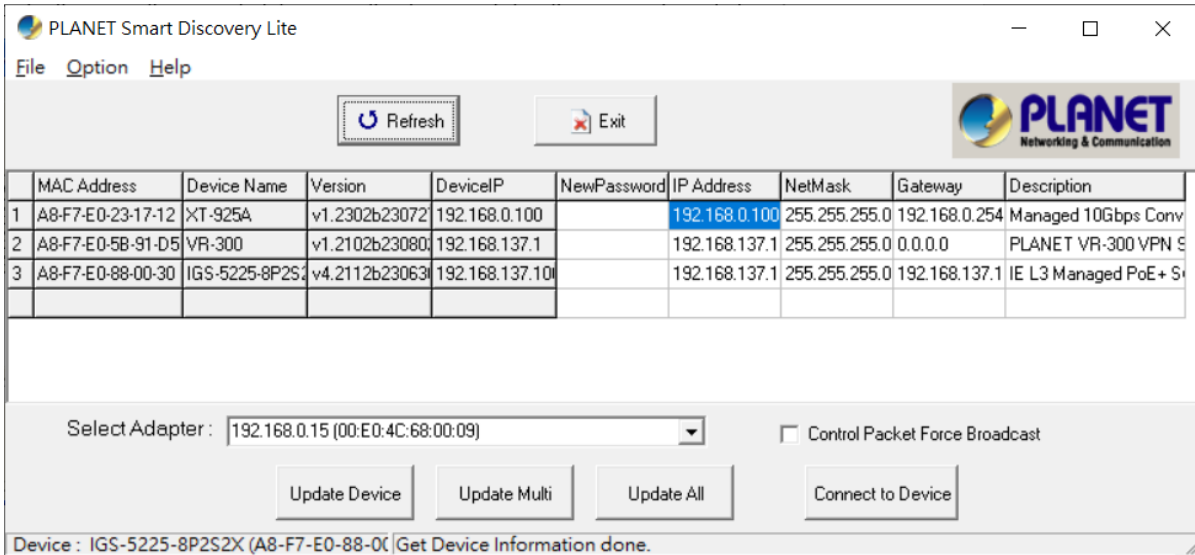

Figure 3-7: Planet Smart Discovery Utility Screen

1. This utility shows all necessary information from the devices, such as MAC address, device name, firmware version and device IP subnet address. It can also assign new password, IP subnet address and description for the devices.
2. After setup is completed, press the **“Update Device”**, **“Update Multi”** or **“Update All”** button to take effect. The meaning of the 3 buttons above are shown below:
 - **Update Device:** use current setting on one single device.
 - **Update Multi:** use current setting on choose multi-devices.
 - **Update All:** use current setting on whole devices in the list.

The same functions mentioned above also can be found in **“Option”** tools bar.

3. To click the **“Control Packet Force Broadcast”** function, it allows you to assign a new setting value to the Web Smart Media converter under a different IP subnet address.
4. Press the **“Connect to Device”** button and the input username/password in web login screen and the web main screen appears in [Figure 3-4](#).
5. Press the **“Exit”** button to shut down the Planet Smart Discovery Utility.

4. WEB CONFIGURATION

This section introduces the configuration and functions of the Web-based management.

About Web-based Management

The Managed Media Converter offers management features that allow users to manage the Managed Media Converter from anywhere on the network through a standard browser such as Microsoft Internet Explorer.

The Web-based Management supports Microsoft Edge, Google Chrome and Firefox. It is based on Java Applets with an aim to reduce network bandwidth consumption, enhance access speed and present an easy viewing screen.

The Managed Media Converter can be configured through an Ethernet connection, making sure the manager PC must be set to the same IP subnet address as the Managed Media Converter.

For example, the default IP address of the Managed Media Converter is **192.168.0.100**, then the manager PC should be set to **192.168.0.x** (where x is a number between 1 and 254, except 100), and the default subnet mask is 255.255.255.0.

If you have changed the default IP address of the Managed Media Converter to 192.168.1.1 with subnet mask 255.255.255.0 via console, then the manager PC should be set to 192.168.1.x (where x is a number between 2 and 254) to do the relative configuration on manager PC.

Figure 4-1-1 Web Management

■ Logging on the media converter

1. Use Microsoft Edge or Google Chrome Web browser. Enter the factory-default IP address to access the Web interface. The factory-default IP address is as follows:

http://192.168.0.100

2. When the following login screen appears, please enter the default username "admin" with password "admin" (or the username/password you have changed via console) to log in the main screen of Managed Media Converter. The login screen in Figure 4-1-2 appears.

Figure 4-1-2 Login screen

Default User Name: **admin**

Default Password: **admin**

After entering the username and password, the main screen appears as Figure 4-1-3 shows.

Figure 4-1-3 Default Main Page

Now, you can use the Web management interface to continue the management or manage the Managed Media Converter via Web interface. The Media Converter Menu on the left of the web page lets you access all the commands and statistics the Managed Media Converter provides.

- It is recommended to use Microsoft Edge or Google Chrome to access Managed Media Converter.
- The changed IP address takes effect immediately after clicking on the **Save** button. You need to use the new IP address to access the Web interface afterwards.

- For security reason, please change and memorize the new password after the first setup.
- Only accept command in lowercase letter under command line interface.

4.1 Main Web Page

The Managed Media Converter provides a Web-based browser interface for configuring and managing it. This interface allows you to access the Managed Media Converter using the Web browser of your choice. This chapter describes how to use the Managed Media Converter's Web browser interface to configure and manage it.

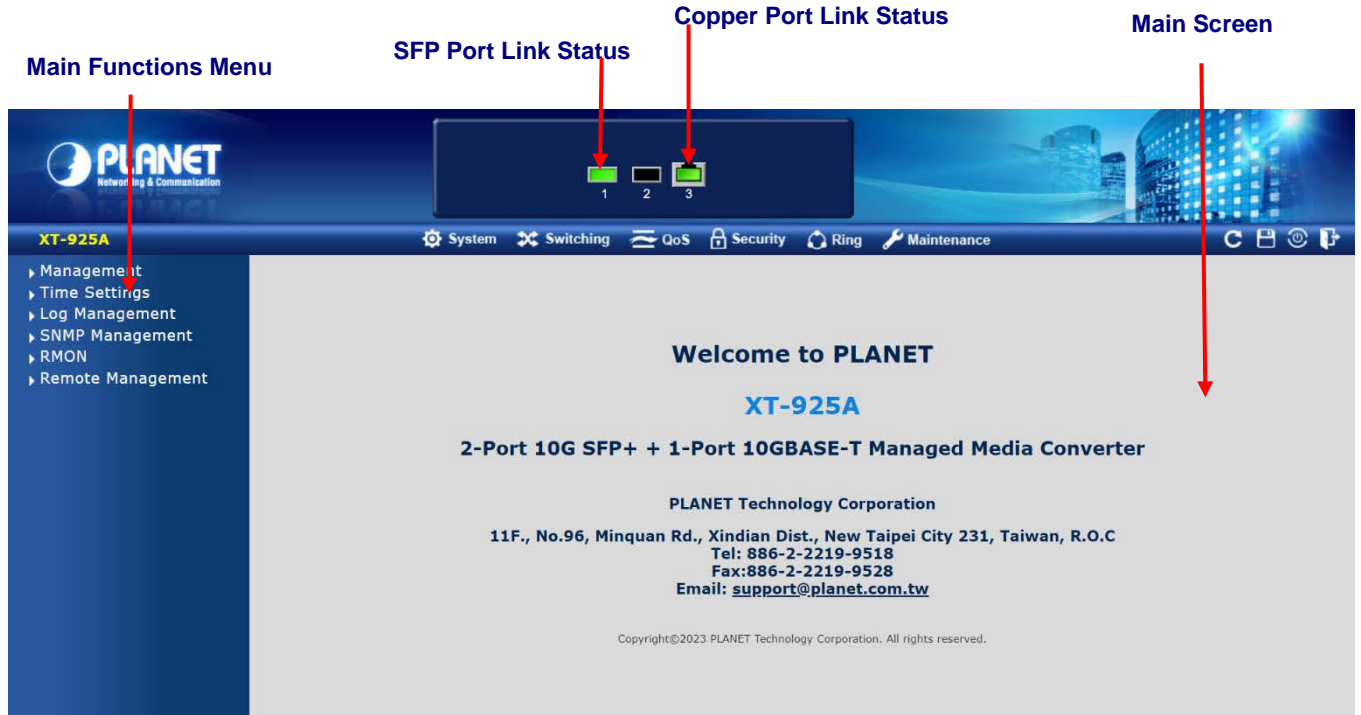

Figure 4-1-4 Main Page

Panel Display

The Web agent displays an image of the Managed Media Converter's ports. The Mode can be set to display different information for the ports, including Link up or Link down. Clicking on the image of a port opens the **Port Statistics** page.

The port states are illustrated as follows:

| State | Disabled | Down | Link |
|------------|---|---|---|
| RJ45 Ports |  |  |  |
| SFP Ports |  |  |  |

Main Menu

By using the onboard Web agent, you can define system parameters, manage and control the Managed Media Converter, and all its ports, or monitor network conditions. Via the Web-Management, the administrator can set up the Managed Media Converter by selecting the functions those listed in the Main Function. The screen in [Figure 4-1-5](#) appears.

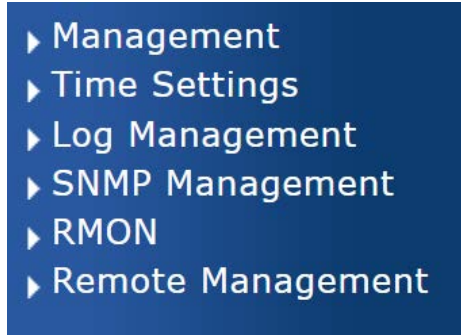

Figure 4-1-5 Managed Media Converter Main Functions Menu

Buttons

: Click to save changes or reset to default.

: Click to log out the Managed Media Converter.

: Click to reboot the Managed Media Converter.

: Click to refresh the page.

4.1.1 Save Button

This save button allows you to save the running/startup/backup configuration or reset media converter in default parameter. The screen in [Figure 4-1-6](#) appears.

Figure 4-1-6 Save Button Screenshot

The page includes the following fields:

| Object | Description |
|---|---|
| <ul style="list-style-type: none"> Save Configuration to FLASH | Click to save the configuration. For more detailed information, please refer to chapter 4.1.2 |

4.1.2 Configuration Manager

The system file folder contains configuration settings. The screen in [Figure 4-1-7](#) appears.

Save Configuration

| | |
|-------------------------|---|
| Source File | <input checked="" type="radio"/> Running configuration <input type="radio"/> Startup configuration <input type="radio"/> Backup configuration |
| Destination File | <input checked="" type="radio"/> Startup configuration <input type="radio"/> Backup configuration |

Apply

Figure 4-1-7 Save Button Screenshot

The page includes the following fields:

| Object | Description |
|--|---|
| <ul style="list-style-type: none"> • Running Configuration | <p>Refers to the running configuration sequence use in the media converter.</p> <p>In media converter, the running configuration file stores in the RAM. In the current version, the running configuration sequence running-config can be saved from the RAM to FLASH by saving "Source File = Running Configuration" to "Destination File = Startup Configuration", so that the running configuration sequence becomes the startup configuration file, which is called configuration save.</p> <p>To prevent illicit file upload and easier configuration, media converter mandates the name of running configuration file to be running-config.</p> |
| <ul style="list-style-type: none"> • Startup Configuration | <p>Refers to the configuration sequence used in media converter startup.</p> <p>Startup configuration file stores in nonvolatile storage, corresponding to the so-called configuration save. If the device supports multi-config file, name the configuration file to be .cfg file, the default is startup.cfg.</p> <p>If the device does not support multi-config file, mandates the name of startup configuration file to be startup-config.</p> |
| <ul style="list-style-type: none"> • Backup Configuration | <p>The backup configuration is empty in FLASH; please save the backup configuration first by "Maintenance > Backup Manager".</p> |

Buttons

Apply: Click to save configuration.

4.1.2.1 Saving Configuration

In the Managed Media Converter, the running configuration file stores in the RAM. In the current version, the running configuration sequence of running-config can be saved from the RAM to FLASH by "Save Configurations to FLASH" function, so that the running configuration sequence becomes the startup configuration file, which is called configuration save.

To save all applied changes and set the current configuration as a startup configuration. The startup-configuration file will be loaded automatically across a system reboot.

1. Click "Save Configuration" on the main menu on the left.

2. Select "Running Configuration" as the Source File and "Startup Configuration" as the Destination File.

Save Configuration

| | |
|-------------------------|---|
| Source File | <input checked="" type="radio"/> Running configuration <input type="radio"/> Startup configuration <input type="radio"/> Backup configuration |
| Destination File | <input checked="" type="radio"/> Startup configuration <input type="radio"/> Backup configuration |

3. Press "Apply" button to save running configuration to startup configuration.

4.2 System

Use the System menu items to display and configure basic administrative details of the Managed Media Converter. Under the system, the following topics are provided to configure and view the system information. This section has the following items:

| | |
|---|--|
| 4.2.1 Management | |
| <input type="checkbox"/> System Information | The system information is provided here. |
| <input type="checkbox"/> IP Configuration | Configure the managed media converter's IP information on this page. |
| <input type="checkbox"/> IPv6 Configuration | Configure the managed media converter's IPv6 information on this page. |
| <input type="checkbox"/> User Configuration | Configure new user name and password on this page. |
| 4.2.2 Time Settings | |
| <input type="checkbox"/> System Time | Configure system time settings on this page. |
| <input type="checkbox"/> SNTP Settings | Configure SNTP settings on this page. |
| 4.2.3 Log Management | |
| <input type="checkbox"/> Logging Service | Configure logging service settings on this page. |
| <input type="checkbox"/> Local Logging | Configure local logging settings on this page. |
| <input type="checkbox"/> Remote Syslog | Configure remote syslog settings on this page. |
| <input type="checkbox"/> Logging Message | Configure logging message settings on this page. |
| 4.2.4 SNMP Management | |
| <input type="checkbox"/> SNMP Setting | Configure System Time settings on this page. |
| <input type="checkbox"/> SNMP Community | Configure SNTP settings on this page. |
| <input type="checkbox"/> SNMP View | Configure System Time settings on this page. |
| <input type="checkbox"/> SNMP Access Group | Configure SNTP settings on this page. |
| <input type="checkbox"/> SNMP User | Configure System Time settings on this page. |
| <input type="checkbox"/> SNMPv1, 2 Notification Recipients | Configure SNTP settings on this page. |
| <input type="checkbox"/> SNMPv3 Notification Recipients | Configure System Time settings on this page. |
| <input type="checkbox"/> SNMP Engine ID | Configure SNTP settings on this page. |
| <input type="checkbox"/> SNMP Remote Engine ID | Configure System Time settings on this page. |
| 4.2.5 RMON | |
| <input type="checkbox"/> RMON Statistics | Configure RMON statistics settings on this page. |
| <input type="checkbox"/> RMON Event | Configure RMON event settings on this page. |
| <input type="checkbox"/> RMON Event Log | Configure RMON event log settings on this page. |
| <input type="checkbox"/> RMON Alarm | Configure RMON alarm settings on this page. |
| <input type="checkbox"/> RMON History | Configure RMON history settings on this page. |
| <input type="checkbox"/> RMON History Log | Configure RMON history log settings on this page. |
| 4.2.6 Remote Management | |
| <input type="checkbox"/> Remote NMS Configuration | Configure Remote NMS Configuration settings on this page. |

4.2.1 Management

4.2.1.1 System Information

The System Info page provides information for the current device information. System Info page helps the administrator to identify the hardware MAC address, software version and system uptime. The screens are shown in [Figure 4-2-1](#) and [Figure 4-2-2](#).

| Information Name | Information Value |
|------------------|---------------------------------------|
| System Name | Edit XT-915A |
| System Location | Edit Default Location |
| System Contact | Edit Default Contact |
| MAC Address | A8:F7:E0:22:33:66 |
| SerialNo | AA504023700299 |
| IP Address | 192.168.0.101 |
| Subnet Mask | 255.255.255.0 |
| Gateway | 192.168.0.254 |
| Loader Version | 2011.12.(4.0.3.55179) |
| Loader Date | Apr 19 2023 - 10:03:30 |
| Firmware Version | v1.2302b230726 |
| Firmware Date | Jul 26 2023 - 11:02:08 |
| System Object ID | 1.3.6.1.4.1.10456.2.643 |
| System Up Time | 0 days, 1 hours, 44 mins, 26 secs |
| PCB/HW Version | V1 |

Figure 4-2-1 System Information Screenshot

The page includes the following fields:

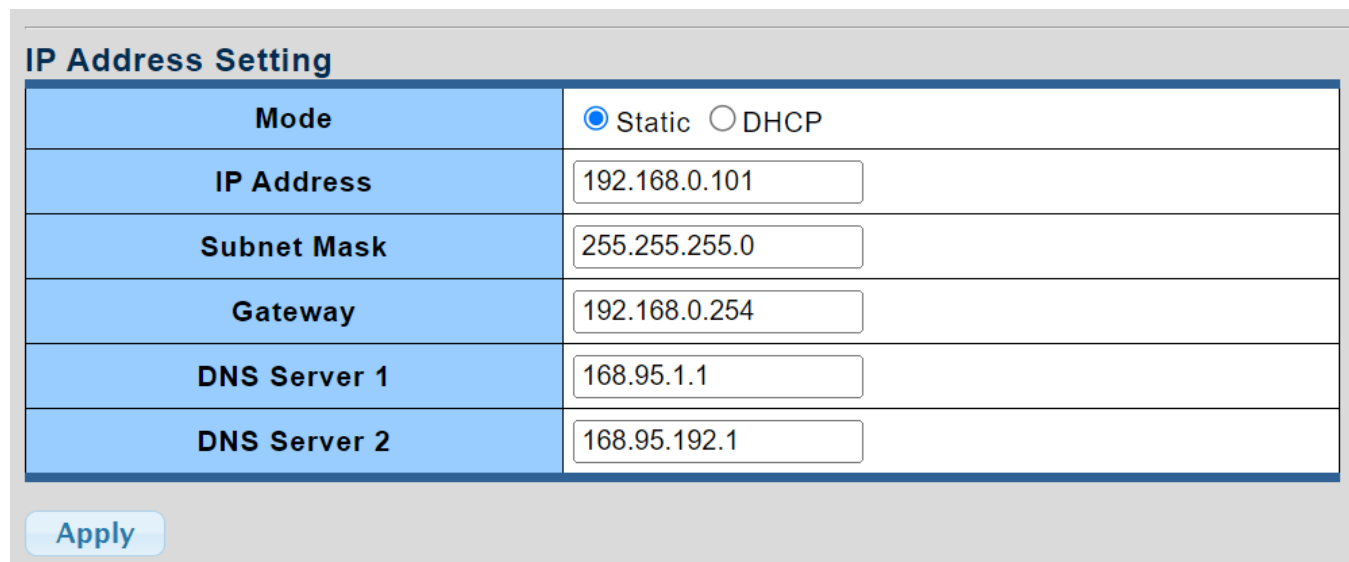

| Object | Description |
|---------------------------|---|
| • System Name | Display the current system name |
| • System Location | Display the current system location |
| • System Contact | Display the current system contact |
| • MAC Address | The MAC address of this Managed Media Converter. |
| • Serial No | Each media converter has its own serial number. |
| • IP Address | The IP address of this Managed Media Converter. |
| • Subnet Mask | The subnet mask of this Managed Media Converter. |
| • Gateway | The gateway of this Managed Media Converter. |
| • Loader Version | The loader version of this Managed Media Converter. |
| • Loader Date | The loader date of this Managed Media Converter. |
| • Firmware Version | The firmware version of this Managed Media Converter. |
| • Firmware Date | The firmware date of this Managed Media Converter. |
| • System Object ID | The system object ID of the Managed Media Converter. |
| • System Up Time | The period of time the device has been operational. |
| • PCN/HW Version | The hardware version of this Managed Media Converter. |

Buttons

[Edit](#): Click to edit parameter.

4.2.1.2 IP Configurations

The IP Configuration includes the IP Address, Subnet Mask and Gateway. The configuration column is used to view or change the IP configuration. Fill out the IP Address, Subnet Mask and Gateway for the device. The screens are shown in [Figure 4-2-2](#) and [Figure 4-2-3](#).

The screenshot shows a configuration window titled "IP Address Setting". It contains a table with the following fields:

| Mode | <input checked="" type="radio"/> Static <input type="radio"/> DHCP |
|--------------|--|
| IP Address | <input type="text" value="192.168.0.101"/> |
| Subnet Mask | <input type="text" value="255.255.255.0"/> |
| Gateway | <input type="text" value="192.168.0.254"/> |
| DNS Server 1 | <input type="text" value="168.95.1.1"/> |
| DNS Server 2 | <input type="text" value="168.95.192.1"/> |

Below the table is an "Apply" button.

Figure 4-2-2 IP Address Setting Screenshot

The page includes the following fields:

| Object | Description |
|---|---|
| <ul style="list-style-type: none"> • Mode | <p>Indicates the IP address mode operation. Possible modes are:</p> <p>Static: Enable NTP mode operation.</p> <p>When enabling NTP mode operation, the agent forwards and transfers NTP messages between the clients and the server when they are not on the same subnet domain.</p> <p>DHCP: Enable DHCP client mode operation.</p> <p>Enable the DHCP client by checking this box. If DHCP fails and the configured IP address is zero, DHCP will retry. If DHCP fails and the configured IP address is non-zero, DHCP will stop and the configured IP settings will be used. The DHCP client will announce the configured System Name as hostname to provide DNS lookup.</p> |
| <ul style="list-style-type: none"> • IP Address | Provide the IP address of this media converter in dotted decimal notation. |
| <ul style="list-style-type: none"> • Subnet Mask | Provide the subnet mask of this media converter in dotted decimal notation. |
| <ul style="list-style-type: none"> • Gateway | Provide the IP address of the router in dotted decimal notation. |
| <ul style="list-style-type: none"> • DNS Server 1/2 | Provide the IP address of the DNS Server in dotted decimal notation. |

4.2.2.2 SNTP Server Settings

SNTP is an acronym for **Simple Network Time Protocol**, a network protocol for synchronizing the clocks of computer systems. The SNTP Server Configuration screens are shown in [Figure 4-2-10](#) and [Figure 4-2-11](#).

The screenshot shows a configuration window titled "SNTP Server Settings". It contains two input fields: "SNTP Server Address" with a placeholder "(X.X.X.X or Hostname)" and "Server Port" with a value of "123" and a range "(1 - 65535 | Default : 123)". An "Apply" button is located at the bottom left.

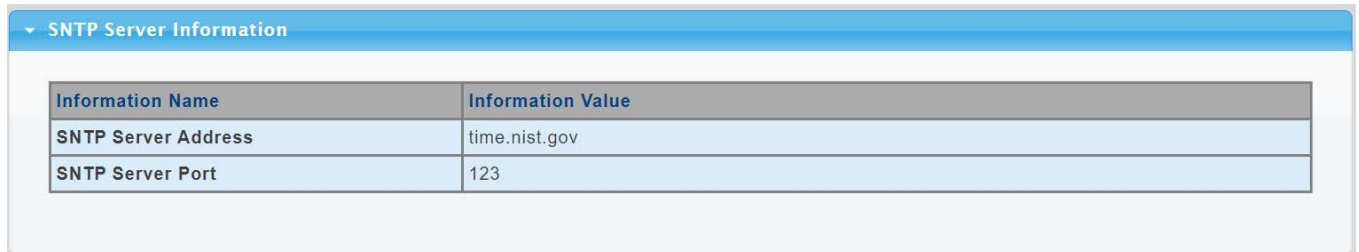

Figure 4-2-10 SNTP Setup Screenshot

The page includes the following fields:

| Object | Description |
|-----------------------|---|
| • SNTP Server Address | Type the IP address or domain name of the SNTP server |
| • Server Port | Type the port number of the SNTP |

Buttons

 : Click to apply changes.

The screenshot shows a table titled "SNTP Server Information" with two columns: "Information Name" and "Information Value".

| Information Name | Information Value |
|---------------------|-------------------|
| SNTP Server Address | time.nist.gov |
| SNTP Server Port | 123 |

Figure 4-2-11 SNTP Server Information Screenshot

The page includes the following fields:

| Object | Description |
|-----------------------|---|
| • SNTP Server Address | Display the current SNTP server address |
| • Server Port | Display the current SNTP server port |

4.2.3 Log Management

The Managed Media Converter log management is provided here. The local logs allow you to configure and limit system messages that are logged to flash or RAM memory. The default is for event levels 0 to 3 to be logged to flash and levels 0 to 6 to be logged to RAM. The following table lists the event levels of the Managed Media Converter:

| Level | Severity Name | Description |
|-------|----------------------|--|
| 7 | Debug | Debugging messages |
| 6 | Informational | Informational messages only |
| 5 | Notice | Normal but significant condition, such as cold start |
| 4 | Warning | Warning conditions (e.g., return false, unexpected return) |
| 3 | Error | Error conditions (e.g., invalid input, default used) |
| 2 | Critical | Critical conditions (e.g., memory allocation, or free memory error - resource exhausted) |
| 1 | Alert | Immediate action needed |
| 0 | Emergency | System unusable |

4.2.3.1 Logging Service

The media converter system local log information is provided here. The local Log screens in [Figure 4-2-12](#) and [Figure 4-2-13](#) appear.

Figure 4-2-12 Logging Settings Screenshot

The page includes the following fields:

| Object | Description |
|---|---|
| <ul style="list-style-type: none"> Logging Service | <p>Enabled: Enable logging service operation.</p> <p>Disabled: Disable logging service operation.</p> |

Buttons

Apply: Click to apply changes.

4.2.4 SNMP Management

4.2.4.1 SNMP Overview

The **Simple Network Management Protocol (SNMP)** is an application layer protocol that facilitates the exchange of management information between network devices. It is part of the **Transmission Control Protocol/Internet Protocol (TCP/IP)** protocol suite. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth.

An SNMP-managed network consists of three key components: Network management stations (NMS's), SNMP agents, Management information base (MIB) and network-management protocol:

- **Network management stations (NMS's):** Sometimes called consoles, these devices execute management applications that monitor and control network elements. Physically, NMS's are usually engineering workstation-caliber computers with fast CPUs, megapixel color displays, substantial memory, and abundant disk space. At least one NMS must be present in each managed environment.
- **Agents:** Agents are software modules that reside in network elements. They collect and store management information such as the number of error packets received by a network element.
- **Management information base (MIB):** A MIB is a collection of managed objects residing in a virtual information store. Collections of related managed objects are defined in specific MIB modules.
- **Network-management protocol:** A management protocol is used to convey management information between agents and NMS's. SNMP is the Internet community's de facto standard management protocol.

SNMP Operations

SNMP itself is a simple request/response protocol. NMS's can send multiple requests without receiving a response.

- **Get** -- Allows the NMS to retrieve an object instance from the agent.
- **Set** -- Allows the NMS to set values for object instances within an agent.
- **Trap** -- Used by the agent to asynchronously inform the NMS of some event. The SNMPv2 trap message is designed to replace the SNMPv1 trap message.

SNMP community

An SNMP community is the group that devices and management stations running SNMP belong to. It helps define where information is sent. The community name is used to identify the group. An SNMP device or agent may belong to more than one SNMP community. It will not respond to requests from management stations that do not belong to one of its communities. SNMP default communities are:

- **Write** = private
- **Read** = public

4.2.4.2 SNMP Setting

Configure SNMP setting on this page. The SNMP System global setting screens in [Figure 4-2-21](#) and [Figure 4-2-22](#) appear.

Figure 4-2-21 SNMP Global Setting Screenshot

The page includes the following fields:

| Object | Description |
|--|--|
| <ul style="list-style-type: none"> Status | Indicates the SNMP mode operation. Possible modes are: Enabled: Enable SNMP mode operation. Disabled: Disable SNMP mode operation. |

Buttons

: Click to apply changes.

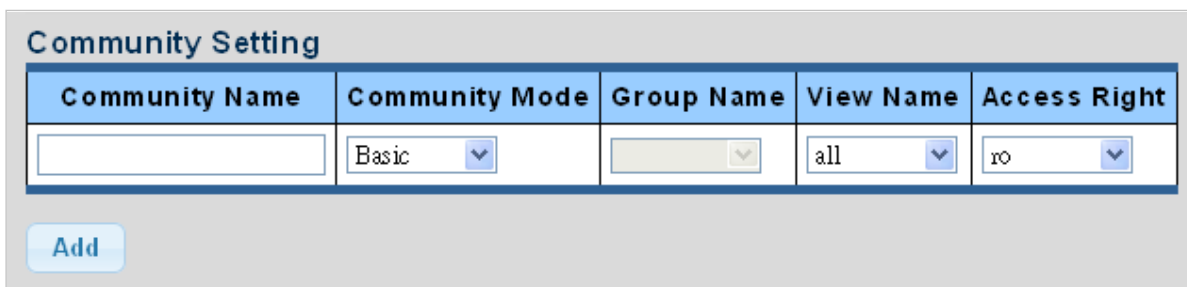

Figure 4-2-22 SNMP Information Screenshot

The page includes the following fields:

| Object | Description |
|--|---------------------------------|
| <ul style="list-style-type: none"> SNMP | Display the current SNMP status |

4.2.4.3 SNMP Community

Configure SNMP Community on this page. The SNMP Community screens in [Figure 4-2-23](#) and [Figure 4-2-24](#) appear.

The screenshot shows a 'Community Setting' form with the following fields:

| Community Name | Community Mode | Group Name | View Name | Access Right |
|----------------------|--|----------------------|--------------------------------------|-------------------------------------|
| <input type="text"/> | Basic <input type="button" value="v"/> | <input type="text"/> | all <input type="button" value="v"/> | ro <input type="button" value="v"/> |

Below the table is an 'Add' button.

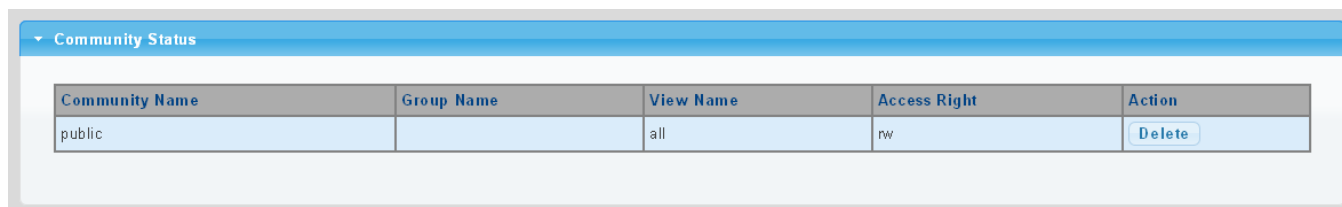

Figure 4-2-23 Community Setting Screenshot

The page includes the following fields:

| Object | Description |
|-------------------------|--|
| • Community Name | Indicates the community read/write access string to permit access to SNMP agent. The allowed string length is 0 to 16. |
| • Community Mode | Indicates the SNMP community supported mode. Possible versions are: <ul style="list-style-type: none"> ■ Basic: Set SNMP community mode supported version 1 and 2c. ■ Advanced: Set SNMP community mode supported version 3. |
| • Group Name | A string identifying the group name that this entry should belong to. The allowed string length is 1 to 16. |
| • View Name | A string identifying the view name that this entry should belong to. The allowed string length is 1 to 16. |
| • Access Right | Indicates the SNMP community type operation. Possible types are: <ul style="list-style-type: none"> RO=Read-Only: Set access string type in read-only mode. RW=Read-Write: Set access string type in read-write mode. |

Buttons

: Click to apply changes.

The screenshot shows a 'Community Status' table with the following data:

| Community Name | Group Name | View Name | Access Right | Action |
|----------------|------------|-----------|--------------|---------------------------------------|
| public | | all | rw | <input type="button" value="Delete"/> |

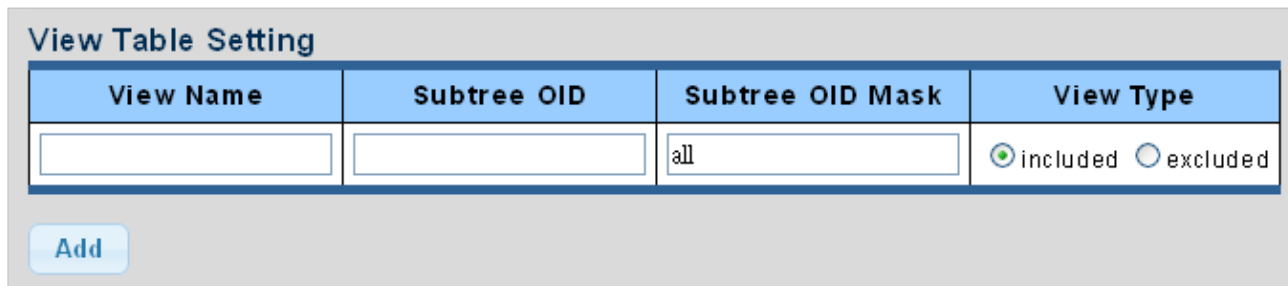

Figure 4-2-24 Community Status Screenshot

The page includes the following fields:

| Object | Description |
|-------------------------|--|
| • Community Name | Display the current community type |
| • Group Name | Display the current SNMP access group's name |
| • View Name | Display the current view name |
| • Access Right | Display the current access type |
| • Delete | <input type="button" value="Delete"/> : Delete the community entry |

4.2.4.4 SNMP View

Configure SNMPv3 view table on this page. The entry index keys are **View Name** and **OID Subtree**. The SNMPv3 View Table Setting screens in [Figure 4-2-25](#) and [Figure 4-2-26](#) appear.

| View Name | Subtree OID | Subtree OID Mask | View Type |
|-----------|-------------|------------------|--|
| | | all | <input checked="" type="radio"/> included <input type="radio"/> excluded |

Add

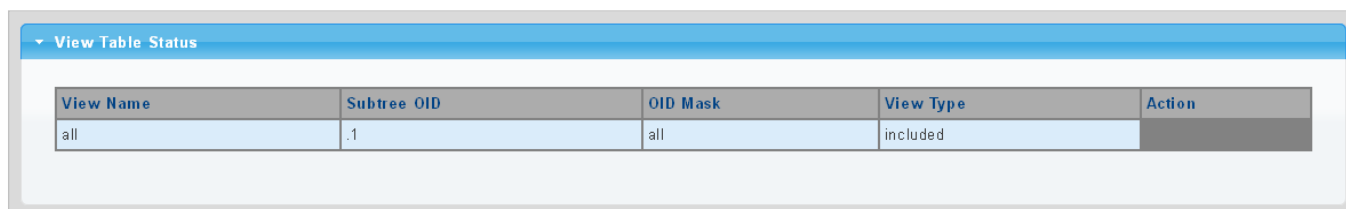

Figure 4-2-25 SNMPv3 View Table Setting Screenshot

The page includes the following fields:

| Object | Description |
|---|--|
| <ul style="list-style-type: none"> View Name | <p>A string identifying the view name that this entry should belong to.</p> <p>The allowed string length is 1 to 16.</p> |
| <ul style="list-style-type: none"> Subtree OID | <p>The OID defining the root of the subtree to add to the named view.</p> <p>The allowed string content is digital number or asterisk (*).</p> |
| <ul style="list-style-type: none"> Subtree OID Mask | <p>The bitmask identifies which positions in the specified object identifier are to be regarded as "wildcards" for the purpose of pattern-matching.</p> |
| <ul style="list-style-type: none"> View Type | <p>Indicates the view type that this entry should belong to. Possible view type are:</p> <p>included: An optional flag to indicate that this view subtree should be included.</p> <p>excluded: An optional flag to indicate that this view subtree should be excluded.</p> <p>General, if a view entry's view type is 'excluded', it should exist another view entry in which view type is 'included' and its OID subtree oversteps the 'excluded' view entry.</p> |

Buttons

Add : Click to add a new view entry.

| View Name | Subtree OID | OID Mask | View Type | Action |
|-----------|-------------|----------|-----------|--------|
| all | .1 | all | included | |

Figure 4-2-26 SNMP View Table Status Screenshot

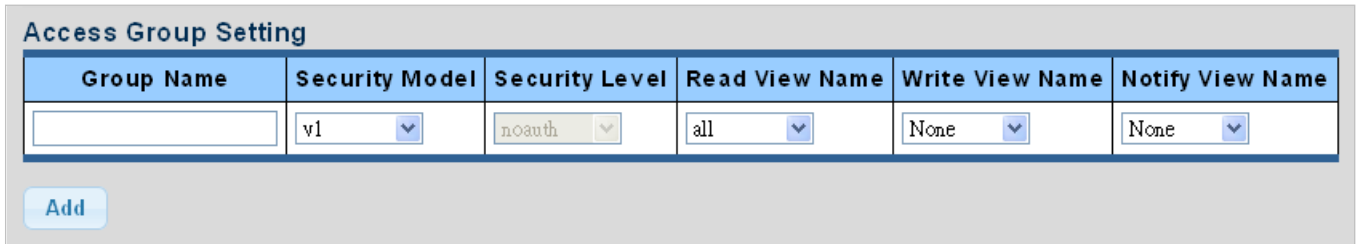

The page includes the following fields:

| Object | Description |

| <ul style="list-style-type: none"> Security Level | <p>Indicates the security model that this entry should belong to.</p> <p>Possible security models are:</p> <ul style="list-style-type: none"> Noauth: None authentication and none privacy security levels are assigned to the group. auth: Authentication and none privacy. priv: Authentication and privacy. <p><i>Note: The Security Level applies to SNNPv3 only.</i></p> |
| <ul style="list-style-type: none"> Read View Name | <p>Read view name is the name of the view in which you can only view the contents of the agent.</p> <p>The allowed string length is 1 to 16.</p> |
| <ul style="list-style-type: none"> Write View Name | <p>Write view name is the name of the view in which you enter data and configure the contents of the agent.</p> <p>The allowed string length is 1 to 16.</p> |
| <ul style="list-style-type: none"> Notify View Name | <p>Notify view name is the name of the view in which you specify a notify, inform, or trap.</p> |

Buttons

: Click to add a new access entry.

: Check to delete the entry.

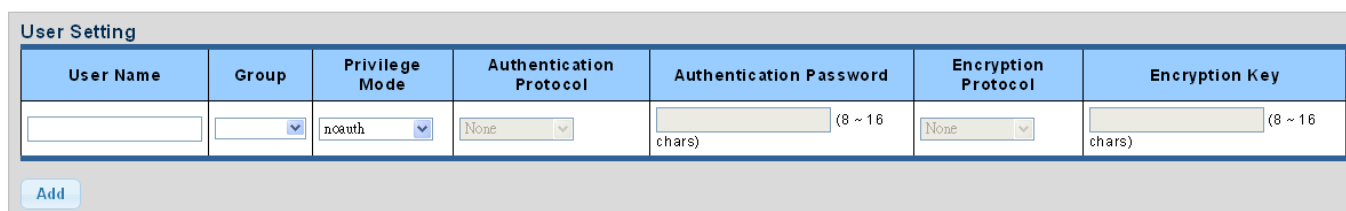

Figure 4-2-28 SNMP View Table Status Screenshot

The page includes the following fields:

| Object | Description |
|---------------------------|--|
| • Group Name | Display the current SNMP access group name |
| • Security Model | Display the current security model |
| • Security Level | Display the current security level |
| • Read View Name | Display the current read view name |
| • Write View Name | Display the current write view name |
| • Notify View Name | Display the current notify view name |
| • Action | <input type="button" value="Delete"/> : Delete the access group entry. |

4.2.4.6 SNMP User

Configure SNMPv3 users table on this page. Each SNMPv3 user is defined by a unique name. Users must be configured with a specific security level and assigned to a group. The SNMPv3 group restricts users to a specific read, write, and notify view. The entry index key is **User Name**. The SNMPv3 User Setting screens in [Figure 4-2-29](#) and [Figure 4-2-30](#) appear.

| User Name | Group | Privilege Mode | Authentication Protocol | Authentication Password | Encryption Protocol | Encryption Key |
|----------------------|-------------------------------|-------------------------------------|-----------------------------------|--|-----------------------------------|--|
| <input type="text"/> | <input type="text" value=""/> | <input type="text" value="noauth"/> | <input type="text" value="None"/> | <input type="text" value=""/> (8 ~ 16 chars) | <input type="text" value="None"/> | <input type="text" value=""/> (8 ~ 16 chars) |

Figure 4-2-29 SNMPv3 Users Configuration Screenshot

The page includes the following fields:

| Object | Description |
|--|---|
| <ul style="list-style-type: none"> User Name | <p>A string identifying the user name that this entry should belong to.</p> <p>The allowed string length is 1 to 16.</p> |
| <ul style="list-style-type: none"> Group | <p>The SNMP Access Group. A string identifying the group name that this entry should belong to.</p> |
| <ul style="list-style-type: none"> Privilege Mode | <p>Indicates the security model that this entry should belong to. Possible security models are:</p> <ul style="list-style-type: none"> ■ NoAuth: None authentication and none privacy. ■ Auth: Authentication and none privacy. ■ Priv: Authentication and privacy. <p>The value of security level cannot be modified if entry already exists. That means you must first ensure that the value is set correctly.</p> |
| <ul style="list-style-type: none"> Authentication Protocol | <p>Indicates the authentication protocol that this entry should belong to. Possible authentication protocols are:</p> <ul style="list-style-type: none"> ■ None: None authentication protocol. ■ MD5: An optional flag to indicate that this user using MD5 authentication protocol. ■ SHA: An optional flag to indicate that this user using SHA authentication protocol. <p>The value of security level cannot be modified if entry already exists. That means you must first ensure that the value is set correctly.</p> |
| <ul style="list-style-type: none"> Authentication Password | <p>A string identifying the authentication pass phrase. For both MD5 and SHA authentication protocols, the allowed string length is 8 to 16.</p> |
| <ul style="list-style-type: none"> Encryption Protocol | <p>Indicates the privacy protocol that this entry should belong to. Possible privacy protocol are:</p> <ul style="list-style-type: none"> ■ None: None privacy protocol. |

| | |
|---|--|
| | <ul style="list-style-type: none"> ■ DES: An optional flag to indicate that this user using DES authentication protocol. |
| <ul style="list-style-type: none"> • Encryption Key | <p>A string identifying the privacy pass phrase. The allowed string length is 8 to 16.</p> |

Buttons

 : Click to add a new user entry.

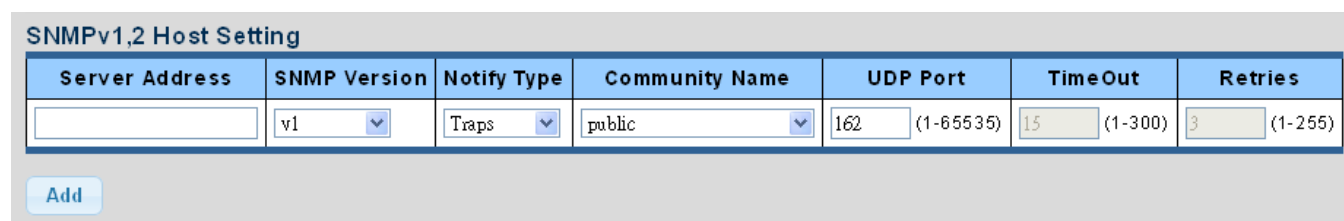

Figure 4-2-30 SNMPv3 Users Status Screenshot

The page includes the following fields:

| Object | Description |
|--|---|
| <ul style="list-style-type: none"> • User Name | Display the current user name |
| <ul style="list-style-type: none"> • Group | Display the current group |

| <ul style="list-style-type: none"> • Access Right | Display the current access right |
| <ul style="list-style-type: none"> • Action |  : Delete the user entry |

4.2.4.7 SNMPv1, 2 Notification Recipients

Configure SNMPv1 and 2 notification recipients on this page. The SNMPv1, 2 Notification Recipients screens in [Figure 4-2-31](#) and [Figure 4-2-32](#) appear.

The screenshot shows a table titled "SNMPv1,2 Host Setting" with the following fields:

| Server Address | SNMP Version | Notify Type | Community Name | UDP Port | Time Out | Retries |
|----------------------|--------------|-------------|----------------|---------------|------------|-----------|
| <input type="text"/> | v1 | Traps | public | 162 (1-65535) | 15 (1-300) | 3 (1-255) |

Below the table is an "Add" button.

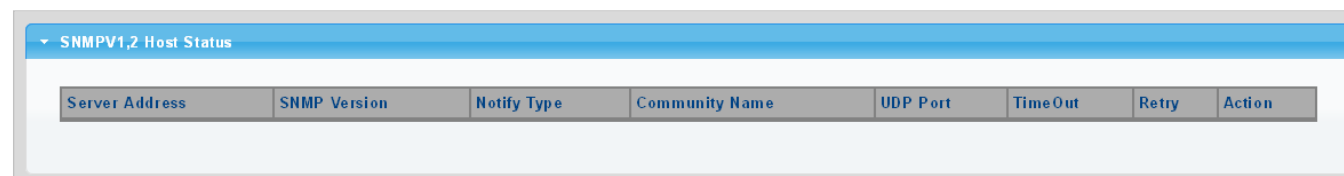

Figure 4-2-31 SNMPv1, 2 Notification Recipients Screenshot

The page includes the following fields:

| Object | Description |
|-------------------------|--|
| • Server Address | Indicates the SNMP trap destination address. It allows a valid IP address in dotted decimal notation ('x.y.z.w'). It can also represent a legally valid IPv4 address. For example, ':::192.1.2.34'. |
| • SNMP Version | Indicates the SNMP trap supported version. Possible versions are: <ul style="list-style-type: none"> ■ SNMP v1: Set SNMP trap supported version 1. ■ SNMP v2c: Set SNMP trap supported version 2c. |
| • Notify Type | Set the notify type in traps or informs. |
| • Community Name | Indicates the community access string when send SNMP trap packet. |
| • UDP Port | Indicates the SNMP trap destination port. SNMP Agent will send SNMP message via this port, the port range is 1~65535. |
| • Time Out | Indicates the SNMP trap inform timeout. The allowed range is from 1 to 300 . |
| • Retries | Indicates the SNMP trap inform retry times. The allowed range is from 1 to 255 . |

Buttons

Add: Click to add a new SNMPv1, 2 host entry.

The screenshot shows a table titled "SNMPv1,2 Host Status" with the following columns:

| Server Address | SNMP Version | Notify Type | Community Name | UDP Port | Time Out | Retry | Action |
|----------------|--------------|-------------|----------------|----------|----------|-------|--------|
|----------------|--------------|-------------|----------------|----------|----------|-------|--------|

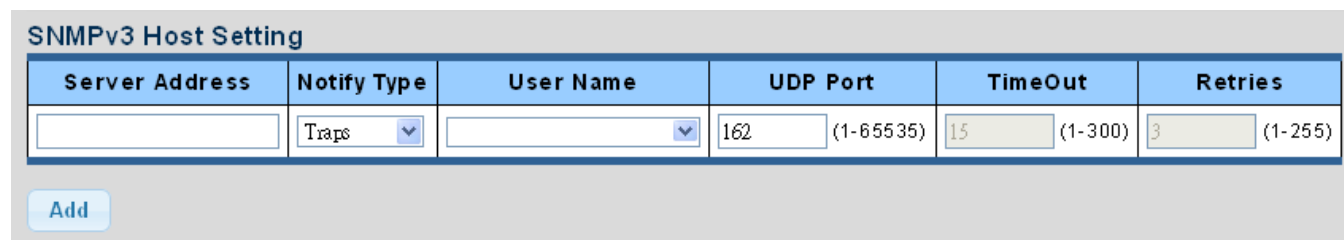

Figure 4-2-32 SNMPv1, 2 Host Status Screenshot

The page includes the following fields:

| Object | Description |
|-------------------------|--|
| • Server Address | Display the current server address |
| • SNMP Version | Display the current SNMP version |
| • Notify Type | Display the current notify type |
| • Community Name | Display the current community name |
| • UDP Port | Display the current UDP port |
| • Time Out | Display the current time out |
| • Retries | Display the current retry times |
| • Action |  : Delete the SNMPv1, 2 host entry. |

4.2.4.8 SNMPv3 Notification Recipients

Configure SNMPv3 notification recipients on this page. The SNMPv1, 2 Notification Recipients screens in [Figure 4-2-33](#) and [Figure 4-2-34](#) appear.

The screenshot shows a form titled "SNMPv3 Host Setting" with the following fields:

| Server Address | Notify Type | User Name | UDP Port | TimeOut | Retries |
|----------------------|-------------|----------------------|---------------|------------|-----------|
| <input type="text"/> | Traps | <input type="text"/> | 162 (1-65535) | 15 (1-300) | 3 (1-255) |

Below the table is an "Add" button.

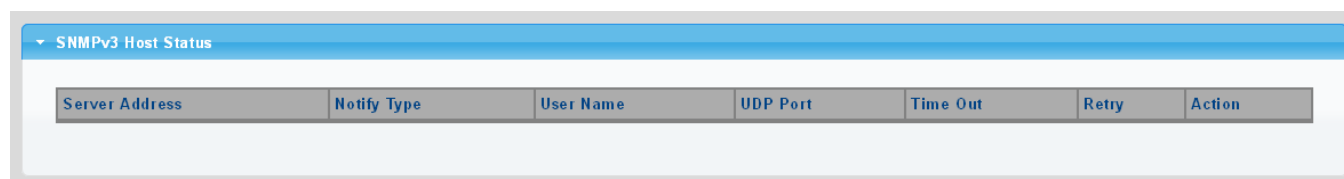

Figure 4-2-33 SNMPv3 Notification Recipients Screenshot

The page includes the following fields:

| Object | Description |
|-------------------------|--|
| • Server Address | Indicates the SNMP trap destination address. It allows a valid IP address in dotted decimal notation ('x.y.z.w'). It can also represent a legally valid IPv4 address. For example, '::192.1.2.34'. |
| • Notify Type | Set the notify type in traps or informs. |
| • User Name | Indicates the user string when send SNMP trap packet. |
| • UDP Port | Indicates the SNMP trap destination port. SNMP Agent will send SNMP message via this port, the port range is 1~65535. |
| • Time Out | Indicates the SNMP trap inform timeout. The allowed range is from 1 to 300 . |
| • Retries | Indicates the SNMP trap inform retry times. The allowed range is from 1 to 255 . |

Buttons

Add: Click to add a new SNMPv3 host entry.

The screenshot shows a table titled "SNMPv3 Host Status" with the following columns:

| Server Address | Notify Type | User Name | UDP Port | Time Out | Retry | Action |
|----------------|-------------|-----------|----------|----------|-------|--------|
|----------------|-------------|-----------|----------|----------|-------|--------|

The page includes the following fields:

| Object | Description |
|-------------------------|--|
| • Server Address | Display the current server address |
| • Notify Type | Display the current notify type |
| • User Name | Display the current user name |
| • UDP Port | Display the current UDP port |
| • Time Out | Display the current time out |
| • Retries | Display the current retry times |
| • Action | Delete : Delete the SNMPv3 host entry |

4.2.4.9 SNMP Engine ID

Configure SNMPv3 Engine ID on this page. The entry index key is Engine ID. The remote engine ID is used to compute the security digest for authenticating and encrypting packets sent to a user on the remote host. The SNMPv3 Engine ID Setting screens in [Figure 4-2-35](#) and [Figure 4-2-36](#) appear.

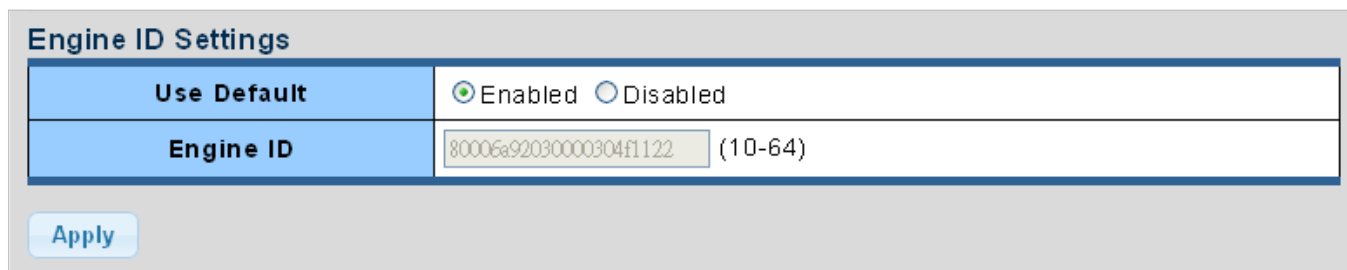

Figure 4-2-35 SNMPv3 Engine ID Setting Screenshot

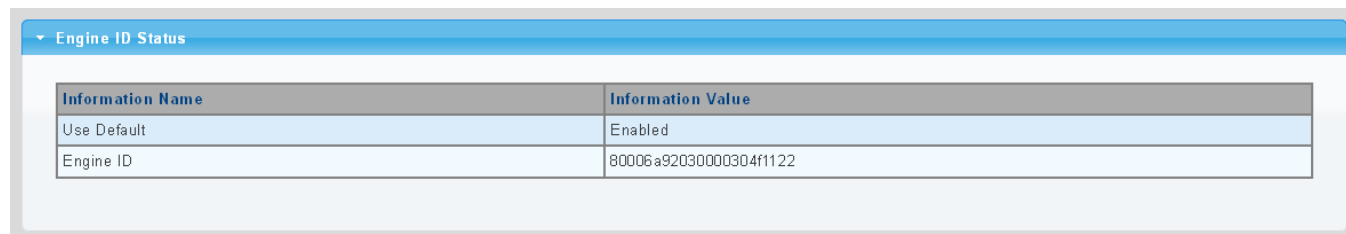

The page includes the following fields:

| Object | Description |
|--|--|
| <ul style="list-style-type: none"> • Engine ID | An octet string identifying the engine ID that this entry should belong to. The string must contain an even number between 10 and 64 hexadecimal digits, but all-zeros and all-'F's are not allowed. |

Buttons

: Click to apply changes.

| Information Name | Information Value |
|------------------|------------------------|
| Use Default | Enabled |
| Engine ID | 80006a92030000304f1122 |

Figure 4-2-36 SNMPv3 Engine ID Status Screenshot

The page includes the following fields:

| Object | Description |
|---|-------------------------------|
| <ul style="list-style-type: none"> • User Default | Display the current status |
| <ul style="list-style-type: none"> • Engine ID | Display the current engine ID |

4.2.4.10 SNMP Remote Engine ID

Configure SNMPv3 remote Engine ID on this page. The SNMPv3 Remote Engine ID Setting screens in [Figure 4-2-37](#) and [Figure 4-2-38](#) appear.

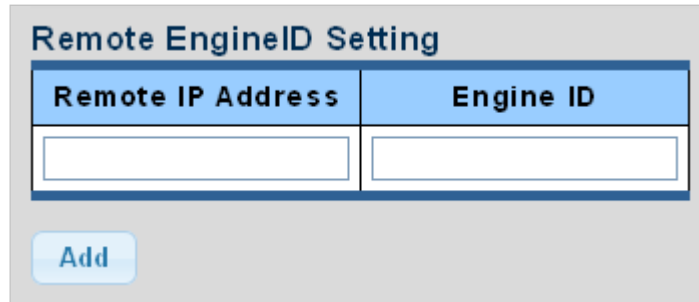

Figure 4-2-37 SNMPv3 Remote Engine ID Setting Screenshot

The page includes the following fields:

| Object | Description |
|---|---|
| <ul style="list-style-type: none"> Remote IP Address | Indicates the SNMP remote engine ID address. It allows a valid IP address in dotted decimal notation ('x.y.z.w'). |
| <ul style="list-style-type: none"> Engine ID | An octet string identifying the engine ID that this entry should belong to. |

Buttons

: Click to apply changes.

Figure 4-2-38 SNMPv3 Remote Engine ID Status Screenshot

The page includes the following fields:

| Object | Description |
|---|--|
| <ul style="list-style-type: none"> Remote IP Address | Display the current remote IP address |
| <ul style="list-style-type: none"> Engine ID | Display the current engine ID |
| <ul style="list-style-type: none"> Action |  : Delete the remote IP address entry |

4.2.5 RMON

RMON is the most important expansion of the standard SNMP. RMON is a set of MIB definitions, used to define standard network monitor functions and interfaces, enabling the communication between SNMP management terminals and remote monitors. RMON provides a highly efficient method to monitor actions inside the subnets.

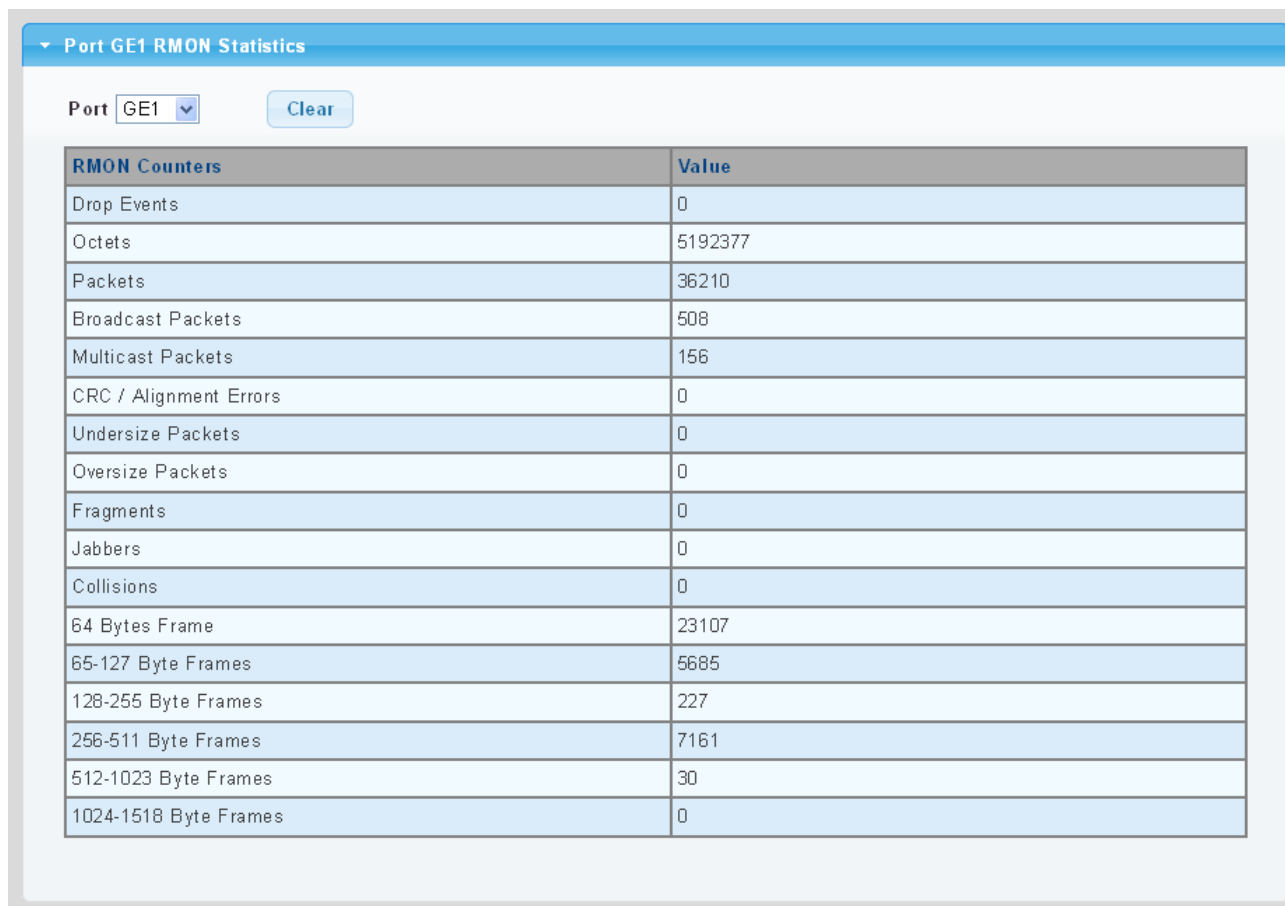

MID of RMON consists of 10 groups. The media converter supports the most frequently used group 1, 2, 3 and 9:

- **Statistics:** Maintain basic usage and error statistics for each subnet monitored by the Agent.
- **History:** Record periodical statistic samples available from Statistics.
- **Alarm:** Allow management console users to set any count or integer for sample intervals and alert thresholds for RMON Agent records.
- **Event:** A list of all events generated by RMON Agent.

Alarm depends on the implementation of Event. Statistics and History display some current or history subnet statistics. Alarm and Event provide a method to monitor any integer data change in the network, and provide some alerts upon abnormal events (sending Trap or record in logs).

4.2.5.1 RMON Statistics

This page provides a Detail of a specific RMON statistics entry; RMON Statistics screen in [Figure 4-2-39](#) appears.

Port GE1

| RMON Counters | Value |
|------------------------|---------|
| Drop Events | 0 |
| Octets | 5192377 |
| Packets | 36210 |
| Broadcast Packets | 508 |
| Multicast Packets | 156 |
| CRC / Alignment Errors | 0 |
| Undersize Packets | 0 |
| Oversize Packets | 0 |
| Fragments | 0 |
| Jabbers | 0 |
| Collisions | 0 |
| 64 Bytes Frame | 23107 |
| 65-127 Byte Frames | 5685 |
| 128-255 Byte Frames | 227 |
| 256-511 Byte Frames | 7161 |
| 512-1023 Byte Frames | 30 |
| 1024-1518 Byte Frames | 0 |

Figure 4-2-39: RMON Statistics Detail Screenshot

The page includes the following fields:

| Object | Description |
|-------------------------|---|
| • Port | Select port from this drop-down list |
| • Drop Events | The total number of events in which packets were dropped by the probe due to lack of resources |
| • Octets | The total number of octets of data (including those in bad packets) received on the network |
| • Packets | The total number of packets (including bad packets, broadcast packets, and multicast packets) received |
| • Broadcast Packets | The total number of good packets received that were directed to the broadcast address |
| • Multicast Packets | The total number of good packets received that were directed to a multicast address |
| • CRC/Alignment Errors | The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets |
| • Undersize Packets | The total number of packets received that were less than 64 octets |
| • Oversize Packets | The total number of packets received that were longer than 1518 octets |
| • Fragments | The number of frames which size is less than 64 octets received with invalid CRC |
| • Jabbers | The number of frames which size is larger than 64 octets received with invalid CRC |
| • Collisions | The best estimate of the total number of collisions on this Ethernet segment. |
| • 64 Bytes Frame | The total number of packets (including bad packets) received that were 64 octets in length |
| • 65~127 Byte Frames | The total number of packets (including bad packets) received that were between 65 to 127 octets in length |
| • 128~255 Byte Frames | The total number of packets (including bad packets) received that were between 128 to 255 octets in length |
| • 256~511 Byte Frames | The total number of packets (including bad packets) received that were between 256 to 511 octets in length |
| • 512~1023 Byte Frames | The total number of packets (including bad packets) received that were between 512 to 1023 octets in length |
| • 1024~1518 Byte Frames | The total number of packets (including bad packets) received that were between 1024 to 1518 octets in length |

Buttons

: Click to clear the RMON statistics

4.2.5.2 RMON Event

Configure RMON Event table on this page. The RMON Event screens in [Figure 4-2-40](#) and [Figure 4-2-41](#) appear.

RMON Event

| | |
|---------------------|---|
| Select Index | <input type="text" value="Create New"/> ▼ |
| Index | <input type="text" value="0"/> (1-65535) |
| Type | <input type="text" value="None"/> ▼ |
| Community | <input type="text"/> |
| Owner | <input type="text"/> (0~31 Characters) |
| Description | <div style="border: 1px solid #ccc; height: 40px; width: 100%;"></div> (0~127 Characters) |

Figure 4-2-40: RMON Event Configuration Screenshot

The page includes the following fields:

| Object | Description |
|-----------------------|--|
| • Select Index | Select index from this drop-down list to create new index or modify index |
| • Index | Indicates the index of the entry. The range is from 1 to 65535 |
| • Type | Indicates the notification of the event, the possible types are: <ul style="list-style-type: none"> ■ none: The total number of octets received on the interface, including framing characters. ■ log: The number of uni-cast packets delivered to a higher-layer protocol. ■ SNMP-Trap: The number of broad-cast and multi-cast packets delivered to a higher-layer protocol. ■ Log and Trap: The number of inbound packets that are discarded even the packets are normal. |
| • Community | Specify the community when trap is sent, the string length is from 0 to 127, default is "public". |
| • Owner | Indicates the owner of this event, the string length is from 0 to 127, default is a null string |
| • Description | Indicates description of this event, the string length is from 0 to 127, default is a null string |

Buttons

: Click to apply changes.

Figure 4-2-41: RMON Event Status Screenshot

The page includes the following fields:

| Object | Description |
|------------------|---|
| • Index | Display the current event index |
| • Event Type | Display the current event type |
| • Community | Display the current community for SNMP trap |
| • Description | Display the current event description |
| • Last Sent Time | Display the current last sent time |
| • Owner | Display the current event owner |
| • Action | Click  to delete RMON event entry |

4.2.5.3 RMON Event Log

This page provides an overview of RMON Event Log. The RMON Event Log Table screen in [Figure 4-2-42](#) appears.

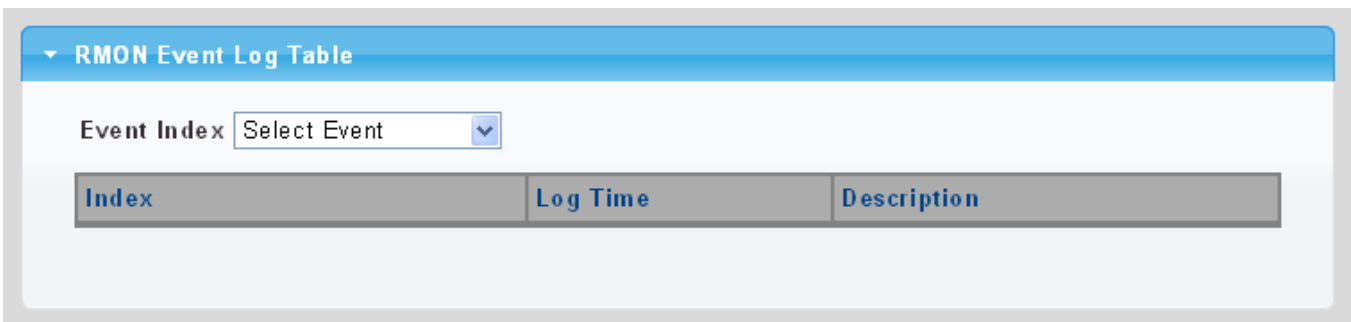

Figure 4-2-42: RMON Event Log Table Screenshot

The page includes the following fields:

| Object | Description |
|----------------|---------------------------------------|
| • Select Index | Select index from this drop-down list |
| • Index | Indicates the index of the log entry |
| • Log Time | Indicates Event log time |
| • Description | Indicates the Event description |

4.2.5.4 RMON Alarm

Configure RMON Alarm table on this page. The RMON Alarm screens in [Figure 4-2-43](#) and [Figure 4-2-44](#) appear.

RMON Alarm

| | |
|--------------------------|--|
| Select Index | <input type="text" value="Create New"/> |
| Index | <input type="text" value="0"/> (1-65535) |
| Sample Port | <input type="text" value="GE1"/> |
| Sample Variable | <input type="text" value="DropEvents"/> |
| Sample Interval | <input type="text" value="0"/> (1-2147483647) |
| Sample Type | <input type="radio"/> absolute <input type="radio"/> delta |
| Rising Threshold | <input type="text" value="0"/> (0-2147483647) |
| Falling Threshold | <input type="text" value="0"/> (0-2147483647) |
| Rising Event | <input type="text" value="0: None (Unassigned)"/> |
| Falling Event | <input type="text" value="0: None (Unassigned)"/> |
| Owner | <input type="text"/> (0~31 Charactors) |

Figure 4-2-43: RMON Alarm Table Screenshot

The page includes the following fields:

| Object | Description |
|--------------------------|---|
| • Select Index | Select index from this drop-down list to create the new index or modify the index |
| • Index | Indicates the index of the alarm entry |
| • Sample Port | Select port from this drop-down list |
| • Sample Variable | Indicates the particular variable to be sampled, the possible variables are: <ul style="list-style-type: none"> ■ DropEvents: The total number of events in which packets were dropped due to lack of resources. ■ Octets: The number of received and transmitted (good and bad) bytes. Includes FCS, but excludes framing bits. ■ Pkts: The total number of frames (bad, broadcast and multicast) received and transmitted. ■ BroadcastPkts: The total number of good frames received that were directed to the broadcast address. Note that this does not include multicast packets. ■ MulticastPkts: The total number of good frames received that were directed |

| | |

4.2.6 Remote Management

4.2.6.1 Planet NMS Controller

The media converter supports remote management with PLANET NMS controller (sold separately). With enabling this function, it can be monitored by PLANET NMS controller remotely. This page displays remote NMS configuration shown in [Figure 4-2-48](#).

Remote NMS Configuration

Figure 4-2-48: Remote NMS Configuration page Screenshot

The page includes the following fields:

| Object | Description |
|---|--|
| <ul style="list-style-type: none"> Remote NMS Enable | Enable the remote NMS controller management. |
| <ul style="list-style-type: none"> NMS Controller IP address | The IP address of remote NMS controller. |
| <ul style="list-style-type: none"> Authorization status | <p>Displays the authorization status status for NMS controller, which can be one of the following:</p> <ul style="list-style-type: none"> Unauthorized  : The media converter is unauthorized for NMS controller. Successful  : The media converter is authorized for NMS controller Failed  : The authorization of NMS controller is failed. Disabled  : The function of remote NMS management is disabled. |

4.2.6.2 Planet CloudViewer App

PLANET CloudViewer is an intelligent app for monitoring your cloud network. By making data and services available from anywhere with an internet connection, cloud networks offer unprecedented convenience. With PLANET CloudViewer, you can monitor your network status in real-time from your mobile phone or tablet, no matter where you are. You can easily check device information, port status, and PoE status from the cloud, which reduces management costs.

Four Steps to Manage Devices in the Cloud with Ease

The PLANET CloudViewer App enhances user experience by simplifying the cloud connection setup process. It does not require a lot of time to set up, and even non-technical users can do it within minutes.

Step 1: Download: download App from google play or apple store.

Step 2: Register: Create a PLANET CloudViewer account.

Step 3: Bind: Bind network devices to an account.

Step 4: Get: Open App and enjoy the services

| Remote NMS Configuration | |
|--------------------------|--------------------------------------|
| Remote NMS Enable | PLANET CloudViewer Server - Internet |
| Subscriber email | xx@xx.xx.xx |
| Password | ***** |
| Status | not Enable |

Apply unbind

Figure 4-2-49: PLANET CloudViewer App Binding Configuration

After downloading the CloudViewer app on the mobile phone and complete registration, go back to the media converter's web UI and select PLANET CloudViewer Server - Internet in the Remote NMS Configuration page. Enter your account information and apply the setting to bind the media converter to the CloudViewer server. Once the Status shows "success", the media converter is ready to be monitored on your mobile phone.

Figure 4-2-50: The screenshot of XT-925A being monitored on a mobile phone

4.3 Switching

Use the Port Menu to display or configure the Managed Media Converter's ports. This section has the following items:

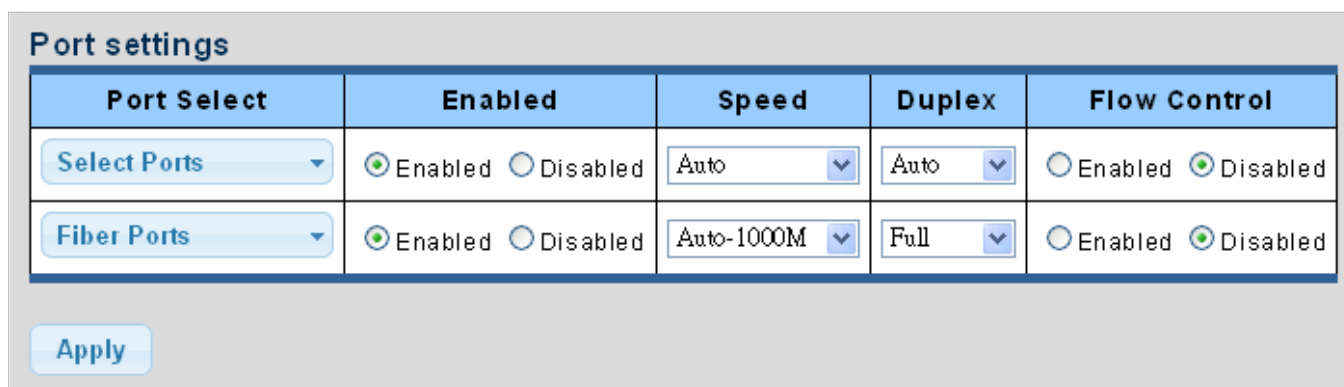

| | |
|--|--|
| 4.3.1 Port Management | |
| <input type="checkbox"/> Port Configuration | Configures port configuration settings. |
| <input type="checkbox"/> Port Counters | Lists Ethernet and RMON port statistics. |
| <input type="checkbox"/> Link Fault Passthrough | Link fault detection and propagation |
| <input type="checkbox"/> Jumbo Frame | Sets the jumbo frame on the media converter. |
| <input type="checkbox"/> Protected Port | Configures protected ports settings. |
| <input type="checkbox"/> EEE | Configures EEE settings. |
| <input type="checkbox"/> SFP Module Status | Displays SFP module information. |
| <input type="checkbox"/> SFP Module Detail Status | Displays SFP module information. |
| 4.3.2 VLAN | |
| <input type="checkbox"/> Management VLAN | Configures the management VLAN. |
| <input type="checkbox"/> Create VLAN | Creates the VLAN group. |
| <input type="checkbox"/> Interface Settings | Configures mode and PVID on the VLAN port. |
| <input type="checkbox"/> Port to VLAN | Configures the VLAN membership. |
| <input type="checkbox"/> Port VLAN Membership | Display the VLAN membership. |
| 4.3.3 LLDP | |
| <input type="checkbox"/> LLDP Global Setting | Configure LLDP global settings on this page. |
| <input type="checkbox"/> LLDP Port Setting | Configure LLDP port settings on this page. |
| <input type="checkbox"/> LLDP Local Device | Configure LLDP local device settings on this page. |
| <input type="checkbox"/> LLDP Remote Device | Configure LLDP remote device settings on this page. |
| <input type="checkbox"/> LLDP Statistics | Provide LLDP statistics on this page. |
| 4.3.4 MAC Address Table | |
| <input type="checkbox"/> Dynamic Learned | Provide dynamic learned information of whole Ethernet interfaces on this page. |
| <input type="checkbox"/> Dynamic Address Setting | Provide aging time setting on this page. |
| <input type="checkbox"/> Static MAC Setting | Provide static MAC address setting on this page. |
| <input type="checkbox"/> MAC Filtering | Provide MAC address filtering setting on this page. |

4.3.1 Port Management

4.3.1.1 Port Configuration

This page displays current port configurations and status. Ports can also be configured here. The table has one row for each port on the selected media converter in a number of columns, which are:

The Port Configuration screens in [Figure 4-3-1](#) and [Figure 4-3-2](#) appear.

| Port Select | Enabled | Speed | Duplex | Flow Control |
|--------------|---|------------|--------|---|
| Select Ports | <input checked="" type="radio"/> Enabled <input type="radio"/> Disabled | Auto | Auto | <input type="radio"/> Enabled <input checked="" type="radio"/> Disabled |
| Fiber Ports | <input checked="" type="radio"/> Enabled <input type="radio"/> Disabled | Auto-1000M | Full | <input type="radio"/> Enabled <input checked="" type="radio"/> Disabled |

Figure 4-3-5 Ethernet link Counters Screenshot

| Object | Description |
|-------------------------------------|---|
| • Alignment Errors | The number of alignment errors (missynchronized data packets). |
| • FCS Errors | A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. |
| • Single Collision Frames | The number of successfully transmitted frames for which transmission is inhibited by exactly one collision. |
| • Multiple Collision Frames | A count of successfully transmitted frames for which transmission is inhibited by more than one collision. |
| • Deferred Transmissions | A count of frames for which the first transmission attempt on a particular interface is delayed because the medium was busy. |
| • Late Collision | The number of times that a collision is detected later than 512 bit-times into the transmission of a packet. |
| • Excessive Collision | A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increase when the interface is operating in full-duplex mode. |
| • Frame Too Long | A count of frames received on a particular interface that exceeds the maximum permitted frame size. |
| • Symbol Errors | The number of received and transmitted symbol errors |
| • Control In Unknown Opcodes | The number of received control unknown opcodes |
| • In Pause Frames | The number of received pause frames |
| • Out Pause Frames | The number of transmitted pause frames |

4.3.1.3 Link Fault Passthrough

Link Fault Pass-through

Link Fault Pass-through is a networking feature. It facilitates the detection and propagation of link faults or errors from one network device to another. It helps maintain network reliability and minimizes downtime by allowing devices to dynamically respond to link faults. Link Fault Pass-through improves fault detection and enables faster troubleshooting and resolution processes.

How it works:

- When a link fault occurs, the device experiencing the fault generates a notification.
- This notification is then forwarded to other connected devices using Link Fault Pass-through.
- Upon receiving the link fault information, the connected devices become aware of the fault.
- This awareness enables them to take appropriate actions, such as rerouting traffic or disabling the affected port.

The LFP group can be made up of Copper-to-Fiber or Fiber-to-Fiber connections. These two types of groupings are shown in Figure 4-3-7 and 4-3-8 respectively.

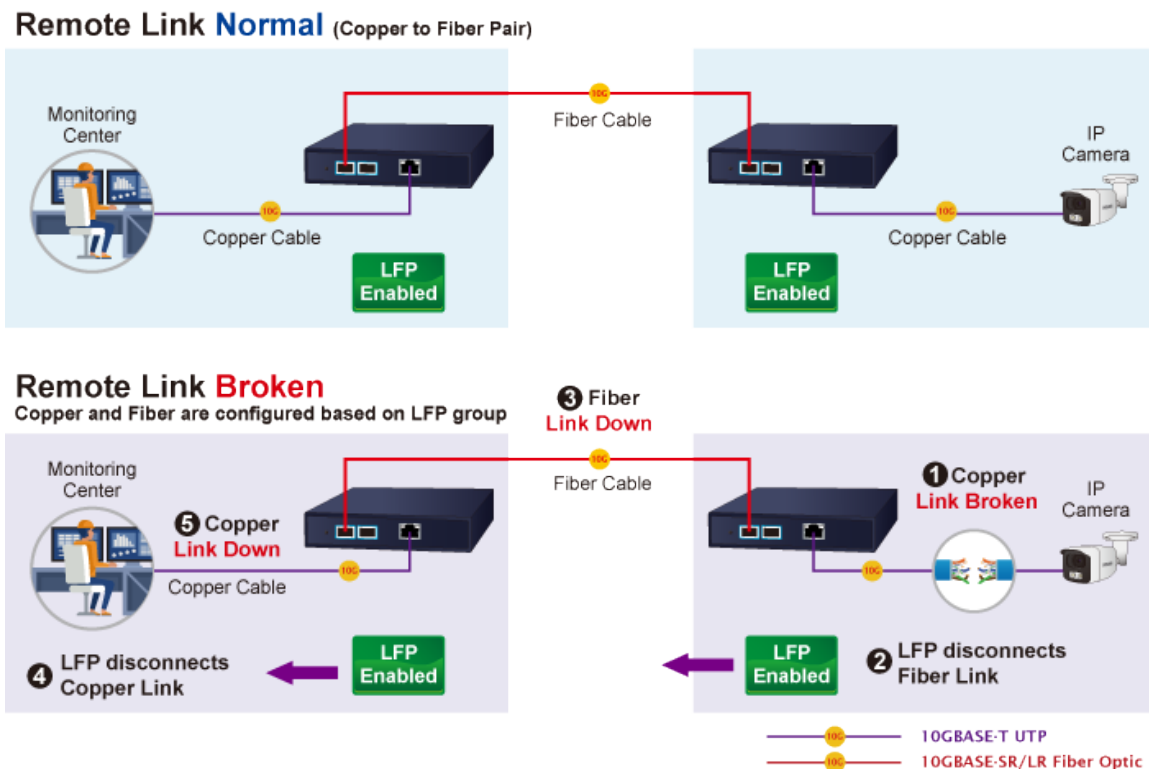

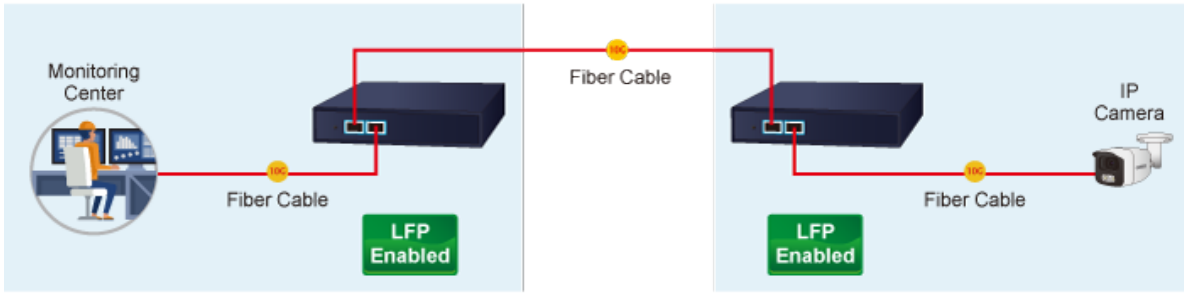

Figure 4-3-7: Copper-to-Fiber LFP Group

Remote Link Normal (Fiber to Fiber Pair)

Remote Link Broken

Copper and Fiber are configured based on LFP group

Figure 4-3-8: Fiber-to-Fiber LFP Group

Go to the Link Fault Passthrough page to select members for the LFP group and enable LFP mode. The LFP information will then be displayed as shown in Figure 4-3-9.

| <ul style="list-style-type: none"> • Jumbo | Display the current maximum frame size |

4.3.1.5 Protected Ports

Overview

When a port is configured to be a member of **protected group** (also called **Private VLAN**), communication between protected ports within that group can be prevented. Two application examples are provided in this section:

- Customers connected to an ISP can be members of the protected group, but they are not allowed to communicate with each other within that VLAN.
- Servers in a farm of web servers in a Demilitarized Zone (DMZ) are allowed to communicate with the outside world and with database servers on the inside segment, but are not allowed to communicate with each other

For protected port group to be applied, the Managed Media Converter must first be configured for standard VLAN operation.

Ports in a protected port group fall into one of these two groups:

- **Promiscuous (Unprotected) ports**

- Ports from which traffic can be forwarded to all ports in the private VLAN
- Ports which can receive traffic from all ports in the private VLAN

- **Isolated (Protected) ports**

- Ports from which traffic can only be forwarded to promiscuous ports in the private VLAN
- Ports which can receive traffic from only promiscuous ports in the private VLAN

The configuration of promiscuous and isolated ports applies to all private VLANs. When traffic comes in on a promiscuous port in a private VLAN, the VLAN mask from the VLAN table is applied. When traffic comes in on an isolated port, the private VLAN mask is applied in addition to the VLAN mask from the VLAN table. This reduces the ports to which forwarding can be done to just the promiscuous ports within the private VLAN.

The port settings relate to the currently unit, as reflected by the page header. The Port Isolation Configuration screens in [Figure 4-3-12](#) and [Figure 4-3-13](#) appear.

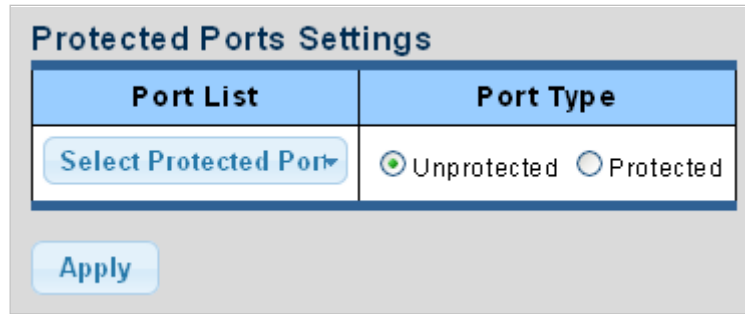

Figure 4-3-12 Protected Ports Settings Screenshot

The page includes the following fields:

| Object | Description |
|-----------|--|
| Port List | Select port number from this drop-down list. |
| Port Type | <p>Displays protected port types.</p> <ul style="list-style-type: none"> - Protected: A single stand-alone VLAN that contains one promiscuous port and one or more isolated (or host) ports. This VLAN conveys traffic between the isolated ports and a lone promiscuous port. - Unprotected: A promiscuous port can communicate with all the interfaces within a private VLAN. This is the default setting. |

| Protected Ports | Display the current protected ports |
| Unprotected Ports | Display the current unprotected ports |

4.3.1.6 EEE

What is EEE

EEE is a power saving option that reduces the power usage when there is low or no traffic utilization. EEE works by powering down circuits when there is no traffic. When a port gets data to be transmitted all circuits are powered up. The time it takes to power up the circuits is named wakeup time. The default wakeup time is 17 us for 1Gbit links and 30 us for other link speeds. EEE devices must agree upon the value of the wakeup time in order to make sure that both the receiving and transmitting device has all circuits powered up when traffic is transmitted. The devices can exchange wakeup time information using the LLDP protocol. EEE works for ports in auto-negotiation mode, where the port is negotiated to either 1G or 100 Mbit full duplex mode. For ports that are not EEE-capable the corresponding EEE checkboxes are grayed out and thus impossible to enable EEE for. The EEE port settings relate to the currently unit, as reflected by the page header.

When a port is powered down for saving power, outgoing traffic is stored in a buffer until the port is powered up again. Because there are some overhead in turning the port down and up, more power can be saved if the traffic can be buffered up until a large burst of traffic can be transmitted. Buffering traffic will give some latency in the traffic.

The EEE Port Settings screen in [Figure 4-3-14](#) and [Figure 4-3-15](#) appears.

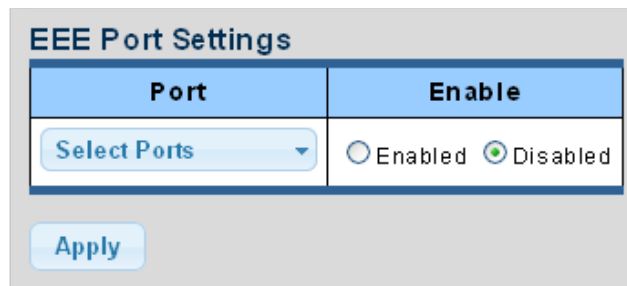

Figure 4-3-14 EEE Port Settings Screenshot

4.3.1.7 SFP Module Information

Managed Media Converter has supported the SFP module with **digital diagnostics monitoring (DDM)** function, this feature is also known as digital optical monitoring (DOM). You can check the physical or operational status of an SFP module via the SFP Module Information page. This page shows the operational status, such as the transceiver type, speed, wavelength, optical output power, optical input power, temperature, laser bias current and transceiver supply voltage in real time. You can also use the hyperlink of port no. to check the statistics on a specific interface.

4.3.1.7.1 SFP Module Status

The SFP Module Status screens in [Figure 4-3-16](#) and [Figure 4-3-17](#) appear.

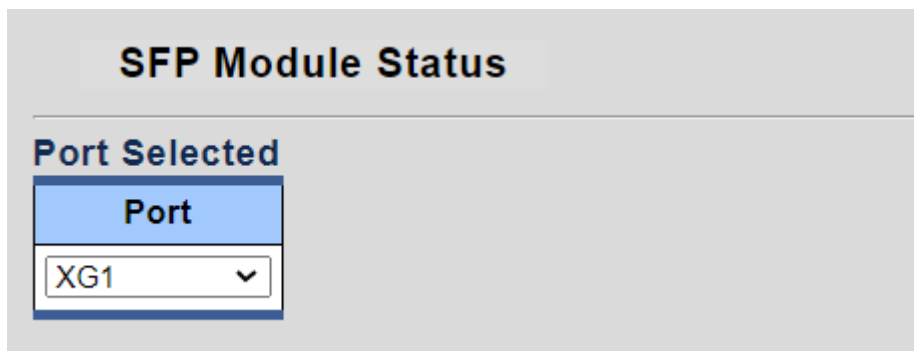

Figure 4-3-16 Port Selected Screenshot

The page includes the following fields:

| Object | Description |
|--------|---|
| Port | Select port number from this drop-down list |

4.3.2 VLAN

4.3.2.1 VLAN Overview

A **Virtual Local Area Network (VLAN)** is a network topology configured according to a logical scheme rather than the physical layout. VLAN can be used to combine any collection of LAN segments into an autonomous user group that appears as a single LAN. VLAN also logically segment the network into different broadcast domains so that packets are forwarded only between ports within the VLAN. Typically, a VLAN corresponds to a particular subnet, although not necessarily.

VLAN can enhance performance by conserving bandwidth and improve security by limiting traffic to specific domains.

A VLAN is a collection of end nodes grouped by logic instead of physical location. End nodes that frequently communicate with each other are assigned to the same VLAN, regardless of where they are physically on the network. Logically, a VLAN can be equated to a broadcast domain, because broadcast packets are forwarded to only members of the VLAN on which the broadcast was initiated.

1. No matter what basis is used to uniquely identify end nodes and assign these nodes VLAN membership, packets cannot cross VLAN without a network device performing a routing function between the VLAN.
2. The Managed Media Converter supports IEEE 802.1Q VLAN. The port untagging function can be used to remove the 802.1 tag from packet headers to maintain compatibility with devices that are tag-unaware.

Note

Note

The Managed Media Converter's default is to assign all ports to a single 802.1Q VLAN named **DEFAULT_VLAN**. As new VLAN is created, the member ports assigned to the new VLAN will be removed from the DEFAULT_VLAN port member list. **The DEFAULT_VLAN has a VID = 1.**

This section has the following items:

| | |
|-------------------------------|---|
| ■ Management VLAN | Configures the management VLAN |
| ■ Create VLAN | Creates the VLAN group |
| ■ Interface Settings | Configures mode and PVID on the VLAN port |
| ■ Port to VLAN | Configures the VLAN membership |
| ■ Port VLAN Membership | Display the VLAN membership |

4.3.2.2 IEEE 802.1Q VLAN

In large networks, routers are used to isolate broadcast traffic for each subnet into separate domains. This Managed Media Converter provides a similar service at Layer 2 by using VLANs to organize any group of network nodes into separate broadcast domains. VLANs confine broadcast traffic to the originating group and can eliminate broadcast storms in large networks. This also provides a more secure and cleaner network environment.

An IEEE 802.1Q VLAN is a group of ports that can be located anywhere in the network but communicate as though they belong to the same physical segment.

VLANs help to simplify network management by allowing you to move devices to a new VLAN without having to change any physical connections. VLANs can be easily organized to reflect departmental groups (such as Marketing or R&D), usage groups (such as e-mail), or multicast groups (used for multimedia applications such as videoconferencing).

VLANs provide greater network efficiency by reducing broadcast traffic and allow you to make network changes without having to update IP addresses or IP subnets. VLANs inherently provide a high level of network security since traffic must pass through a configured Layer 3 link to reach a different VLAN.

This Managed Media Converter supports the following VLAN features:

- Up to 255 VLANs based on the IEEE 802.1Q standard.
- Port overlapping, allowing a port to participate in multiple VLANs.
- End stations can belong to multiple VLANs.
- Passing traffic between VLAN-aware and VLAN-unaware devices

■ IEEE 802.1Q Standard

VLAN allow a network to be segmented in order to reduce the size of broadcast domains. All packets entering a VLAN will only be forwarded to the stations (over IEEE 802.1Q enabled switches) that are members of that VLAN, and this includes broadcast, multicast and unicast packets from unknown sources.

VLAN can also provide a level of security to your network. IEEE 802.1Q VLAN will only deliver packets between stations that are members of the VLAN. Any port can be configured as either **tagging** or **untagging**:

- The untagging feature of IEEE 802.1Q VLAN allows VLAN to work with legacy switches that don't recognize VLAN tags in packet headers.
- The tagging feature allows VLAN to span multiple 802.1Q-compliant switches through a single physical connection and allows Spanning Tree to be enabled on all ports and work normally.

Some relevant terms:

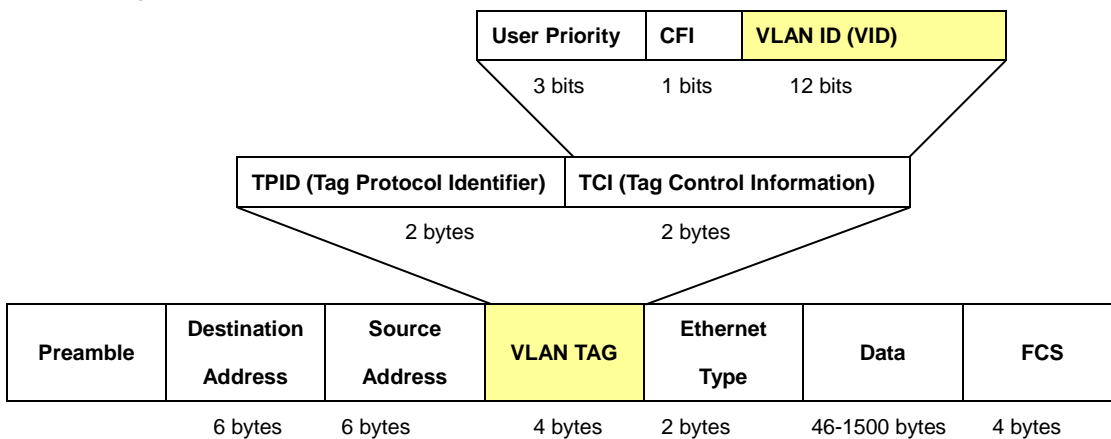

- **Tagging** - The act of putting 802.1Q VLAN information into the header of a packet.
- **Untagging** - The act of stripping 802.1Q VLAN information out of the packet header.

802.1Q VLAN Tags

The figure below shows the 802.1Q VLAN tag. There are four additional octets inserted after the source MAC address. Their presence is indicated by a value of **0x8100** in the Ether Type field. When a packet's Ether Type field is equal to 0x8100, the packet carries the IEEE 802.1Q/802.1p tag. The tag is contained in the following two octets and consists of 3 bits of user priority, 1 bit of Canonical Format Identifier (CFI - used for encapsulating Token Ring packets so they can be carried across Ethernet backbones), and 12 bits of **VLAN ID (VID)**. The 3 bits of user priority are used by 802.1p. The VID is the VLAN identifier and is used by the 802.1Q standard. Because the VID is 12 bits long, 4094 unique VLAN can be identified.

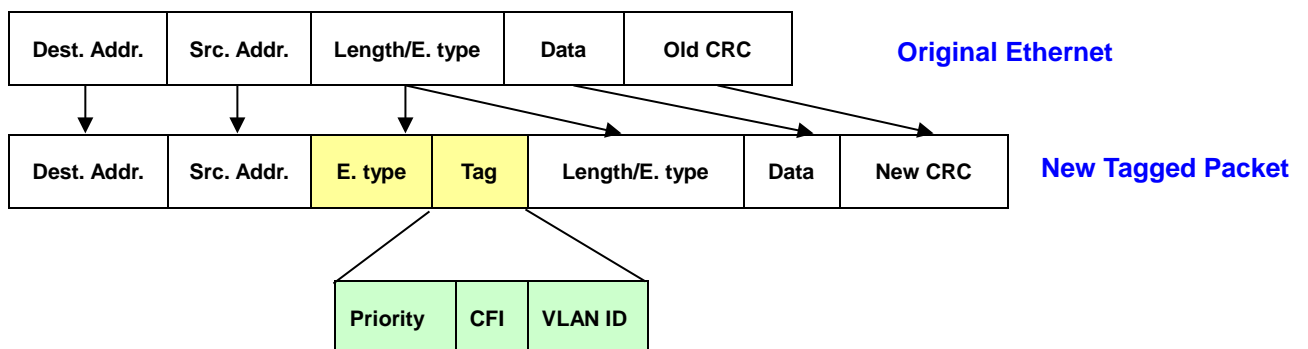

The tag is inserted into the packet header making the entire packet longer by 4 octets. All of the information originally contained in the packet is retained.

802.1Q Tag

The Ether Type and VLAN ID are inserted after the MAC source address, but before the original Ether Type/Length or Logical Link Control. Because the packet is now a bit longer than it was originally, the Cyclic Redundancy Check (CRC) must be recalculated.

Adding an IEEE802.1Q Tag

■ Port VLAN ID

Packets that are tagged (are carrying the 802.1Q VID information) can be transmitted from one 802.1Q compliant network device to another with the VLAN information intact. This allows 802.1Q VLAN to span network devices (and indeed, the entire network – if all network devices are 802.1Q compliant).

Every physical port on a switch has a PVID. 802.1Q ports are also assigned a PVID, for use within the switch. If no VLAN are defined on the switch, all ports are then assigned to a default VLAN with a PVID equal to 1. Untagged packets are assigned the PVID of the port on which they were received. Forwarding decisions are based upon this PVID, in so far as VLAN are concerned. Tagged packets are forwarded according to the VID contained within the tag. Tagged packets are also assigned a PVID, but the PVID is not used to make packet forwarding decisions, the VID is.

Tag-aware switches must keep a table to relate PVID within the switch to VID on the network. The switch will compare the VID of a packet to be transmitted to the VID of the port that is to transmit the packet. If the two VID are different the switch will drop the packet. Because of the existence of the PVID for untagged packets and the VID for tagged packets, tag-aware and tag-unaware network devices can coexist on the same network.

A switch port can have only one PVID, but can have as many VID as the switch has memory in its VLAN table to store them.

Because some devices on a network may be tag-unaware, a decision must be made at each port on a tag-aware device before packets are transmitted – should the packet to be transmitted have a tag or not? If the transmitting port is connected to a tag-unaware device, the packet should be untagged. If the transmitting port is connected to a tag-aware device, the packet should be tagged.

■ Default VLANs

The Switch initially configures one VLAN, VID = 1, called "**default**." The factory default setting assigns all ports on the Switch to the "**default**". As new VLAN are configured in Port-based mode, their respective member ports are removed from the "**default**".

■ Assigning Ports to VLANs

Before enabling VLANs for the switch, you must first assign each port to the VLAN group(s) in which it will participate. By default all ports are assigned to VLAN 1 as untagged ports. Add a port as a tagged port if you want it to carry traffic for one or more VLANs, and any intermediate network devices or the host at the other end of the connection supports VLANs. Then assign ports on the other VLAN-aware network devices along the path that will carry this traffic to the same VLAN(s), either manually or dynamically using GVRP. However, if you want a port on this switch to participate in one or more VLANs, but none of the intermediate network devices nor the host at the other end of the connection supports VLANs, then you should add this port to the VLAN as an untagged port.

VLAN-tagged frames can pass through VLAN-aware or VLAN-unaware network interconnection devices, but the VLAN tags should be stripped off before passing it on to any end-node host that does not support VLAN tagging.

■ VLAN Classification

When the switch receives a frame, it classifies the frame in one of two ways. If the frame is untagged, the switch assigns the frame to an associated VLAN (based on the default VLAN ID of the receiving port). But if the frame is tagged, the switch uses the tagged VLAN ID to identify the port broadcast domain of the frame.

■ Port Overlapping

Port overlapping can be used to allow access to commonly shared network resources among different VLAN groups, such as file servers or printers. Note that if you implement VLANs which do not overlap, but still need to communicate, you can connect them by enabled routing on this switch.

■ Untagged VLANs

Untagged (or static) VLANs are typically used to reduce broadcast traffic and to increase security. A group of network users assigned to a VLAN form a broadcast domain that is separate from other VLANs configured on the switch. Packets are forwarded only between ports that are designated for the same VLAN. Untagged VLANs can be used to manually isolate user groups or subnets.

4.3.2.3 Management VLAN

Configure Management VLAN on this page. The screens in [Figure 4-3-19](#) and [Figure 4-3-20](#) appear.

Figure 4-3-19 Management VLAN Setting Screenshot

The page includes the following fields:

| Object | Description |
|-------------------|-----------------------------|
| • Management VLAN | Provide the managed VLAN ID |

Buttons

: Click to apply changes.

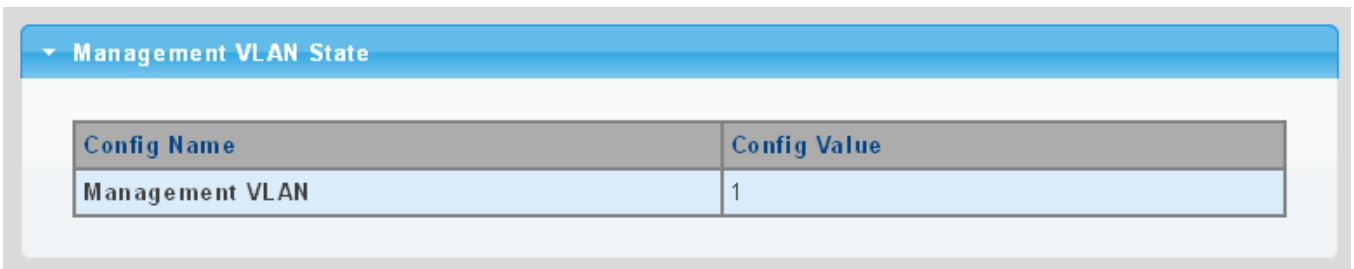

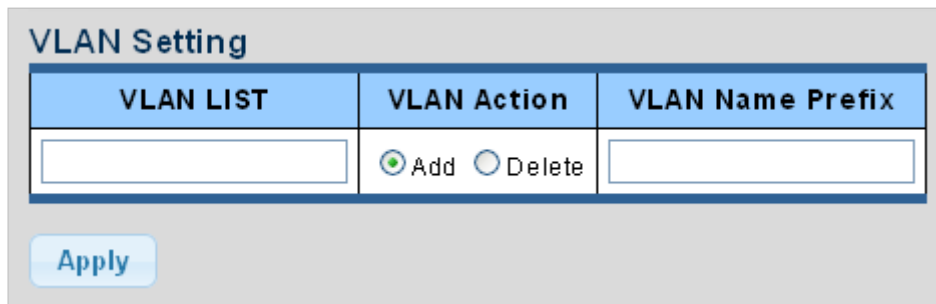

Figure 4-3-20 Management VLAN State Screenshot

The page includes the following fields:

| Object | Description |
|-------------------|--------------------------------------|
| • Management VLAN | Display the current management VLAN. |

4.3.2.4 Create VLAN

Create/delete VLAN on this page. The screens in [Figure 4-3-21](#) and [Figure 4-3-22](#) appear.

The screenshot shows a 'VLAN Setting' form with three columns: 'VLAN LIST', 'VLAN Action', and 'VLAN Name Prefix'. The 'VLAN Action' column contains radio buttons for 'Add' (selected) and 'Delete'. Below the columns is an 'Apply' button.

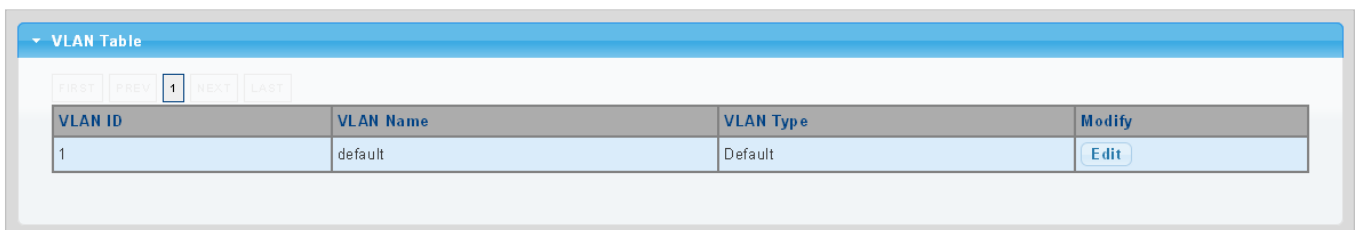

Figure 4-3-21 VLAN Setting Screenshot

The page includes the following fields:

| Object | Description |
|--------------------|---|
| • VLAN List | Indicates the ID of this particular VLAN. |
| • VLAN Action | This column allows users to add or delete VLAN s. |
| • VLAN Name Prefix | Indicates the name of this particular VLAN. |

Buttons

: Click to apply changes.

The screenshot shows a 'VLAN Table' with a table containing one entry. The table has columns for 'VLAN ID', 'VLAN Name', 'VLAN Type', and 'Modify'. The entry shows '1' for VLAN ID, 'default' for VLAN Name, and 'Default' for VLAN Type. An 'Edit' button is visible in the 'Modify' column.

Figure 4-3-22 VLAN Table Screenshot

The page includes the following fields:

| Object | Description |
|-------------|--|
| • VLAN ID | Display the current VLAN ID entry |
| • VLAN Name | Display the current VLAN ID name |
| • VLAN Type | Display the current VLAN ID type |
| • Modify | Click  to modify VLAN configuration |

4.3.2.5 Interface Settings

This page is used for configuring the Managed Media Converter port VLAN. The VLAN per Port Configuration page contains fields for managing ports that are part of a VLAN. The port **default VLAN ID (PVID)** is configured on the VLAN Port Configuration page. All untagged packets arriving to the device are tagged by the ports PVID.

Understand nomenclature of the Switch

■ IEEE 802.1Q Tagged and Untagged

Every port on an 802.1Q compliant switch can be configured as tagged or untagged.

- **Tagged:** Ports with tagging enabled will put the VID number, priority and other VLAN information into the header of all packets that flow into those ports. If a packet has previously been tagged, the port will not alter the packet, thus keeping the VLAN information intact. The VLAN information in the tag can then be used by other 802.1Q compliant devices on the network to make packet-forwarding decisions.
- **Untagged:** Ports with untagging enabled will strip the 802.1Q tag from all packets that flow into those ports. If the packet doesn't have an 802.1Q VLAN tag, the port will not alter the packet. Thus, all packets received by and forwarded by an untagging port will have no 802.1Q VLAN information. (Remember that the PVID is only used internally within the Switch). Untagging is used to send packets from an 802.1Q-compliant network device to a non-compliant network device.

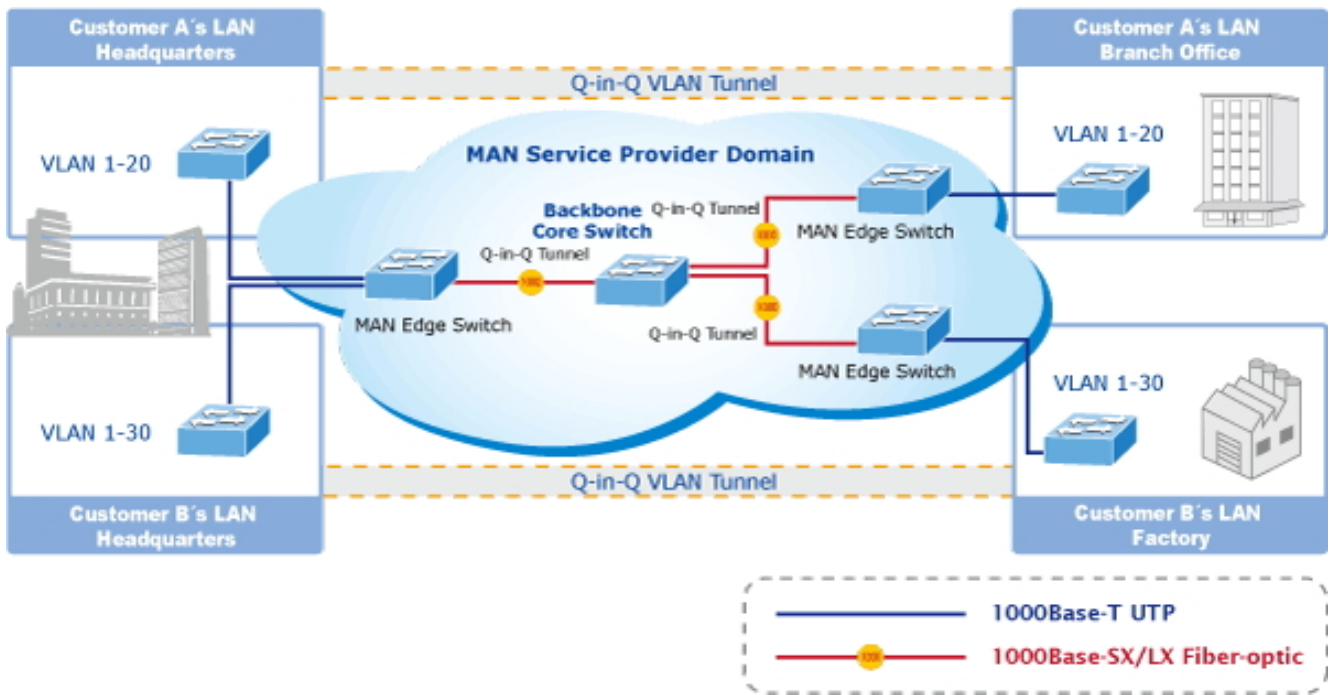

| Frame Income Frame Leave | Income Frame is tagged | Income Frame is untagged |
|-----------------------------|-------------------------------|---------------------------------|
| Leave port is tagged | Frame remains tagged | Tag is inserted |
| Leave port is untagged | Tag is removed | Frame remain untagged |

Table 4-5-1: Ingress / Egress Port with VLAN VID Tag / Untag Table

■ IEEE 802.1Q Tunneling (Q-in-Q)

IEEE 802.1Q Tunneling (QinQ) is designed for service providers carrying traffic for multiple customers across their networks. QinQ tunneling is used to maintain customer-specific VLAN and Layer 2 protocol configurations even when different customers use the same internal VLAN IDs. This is accomplished by inserting **Service Provider VLAN (SPVLAN)** tags into the customer's frames when they enter the service provider's network, and then stripping the tags when the frames leave the network.

A service provider's customers may have specific requirements for their internal VLAN IDs and number of VLANs supported. VLAN ranges required by different customers in the same service-provider network might easily overlap, and traffic passing through the infrastructure might be mixed. Assigning a unique range of VLAN IDs to each customer would restrict customer configurations, require intensive processing of VLAN mapping tables, and could easily exceed the maximum VLAN limit of 4096.

The Managed Media Converter supports multiple VLAN tags and can therefore be used in MAN applications as a provider bridge, aggregating traffic from numerous independent customer LANs into the **MAN (Metro Access Network)** space. One of the purposes of the provider bridge is to recognize and use VLAN tags so that the VLANs in the MAN space can be used independent of the customers' VLANs. This is accomplished by adding a VLAN tag with a MAN-related VID for frames entering the MAN. When leaving the MAN, the tag is stripped and the original VLAN tag with the customer-related VID is again available.

This provides a tunneling mechanism to connect remote customer VLANs through a common MAN space without interfering with the VLAN tags. All tags use EtherType **0x8100** or **0x88A8**, where 0x8100 is used for customer tags and 0x88A8 are used for service provider tags.

In cases where a given service VLAN only has two member ports on the switch, the learning can be disabled for the particular VLAN and can therefore rely on flooding as the forwarding mechanism between the two ports. This way, the MAC table requirements is reduced.

Edit Interface Setting

The Edit Interface Setting/Status screens in [Figure 4-3-23](#) and [Figure 4-3-24](#) appear.

4.3.3 LLDP

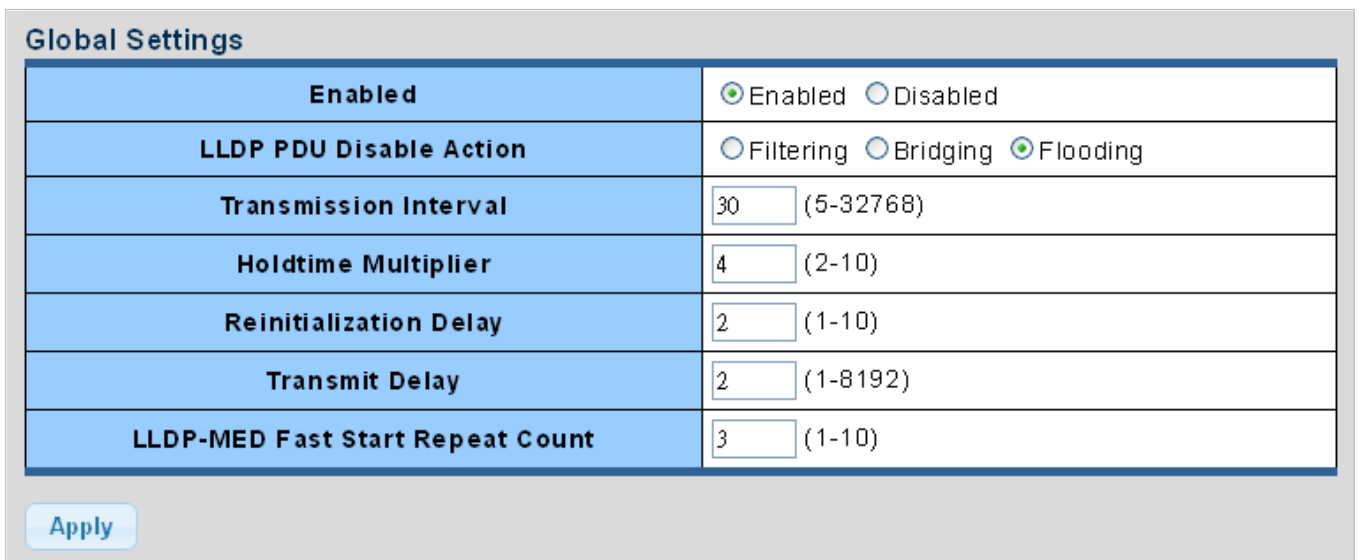

4.3.3.1 Link Layer Discovery Protocol

Link Layer Discovery Protocol (LLDP) is used to discover basic information about neighboring devices on the local broadcast domain. LLDP is a Layer 2 protocol that uses periodic broadcasts to advertise information about the sending device. Advertised information is represented in **Type Length Value (TLV)** format according to the IEEE 802.1ab standard, and can include details such as device identification, capabilities and configuration settings. LLDP also defines how to store and maintain information gathered about the neighboring network nodes it discovers.

Link Layer Discovery Protocol - Media Endpoint Discovery (LLDP-MED) is an extension of LLDP intended for managing endpoint devices such as Voice over IP phones and network switches. The LLDP-MED TLVs advertise information such as network policy, power, inventory, and device location details. LLDP and LLDP-MED information can be used by SNMP applications to simplify troubleshooting, enhance network management, and maintain an accurate network topology.

4.3.3.2 LLDP Global Setting

This page allows the user to inspect and configure the current LLDP port settings. The LLDP Global Setting and Config screens in [Figure 4-3-27](#) and [Figure 4-3-28](#) appear.

| Global Settings | |
|---|--|
| Enabled | <input checked="" type="radio"/> Enabled <input type="radio"/> Disabled |
| LLDP PDU Disable Action | <input type="radio"/> Filtering <input type="radio"/> Bridging <input checked="" type="radio"/> Flooding |
| Transmission Interval | <input type="text" value="30"/> (5-32768) |
| Holdtime Multiplier | <input type="text" value="4"/> (2-10) |
| Reinitialization Delay | <input type="text" value="2"/> (1-10) |
| Transmit Delay | <input type="text" value="2"/> (1-8192) |
| LLDP-MED Fast Start Repeat Count | <input type="text" value="3"/> (1-10) |

Figure 4-3-27 Global Setting Screenshot

The page includes the following fields:

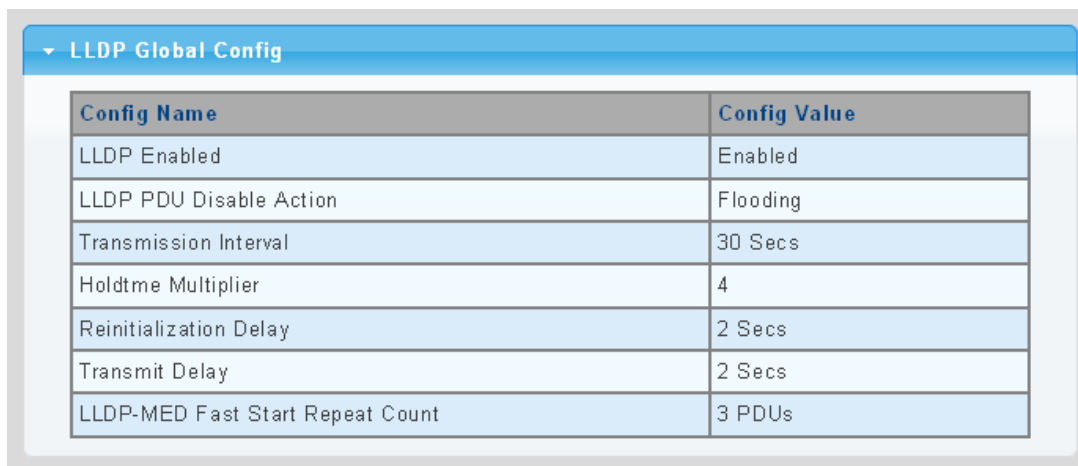

| Object | Description |
|--|--|
| <ul style="list-style-type: none"> • Enable | Globally enable or disable LLDP function |
| <ul style="list-style-type: none"> • LLDP PDU Disable Action | Set LLDP PDU disable action: include "Filtering", "Bridging" and "Flooding". <ul style="list-style-type: none"> ■ Filtering: discard all LLDP PDU. ■ Bridging: transmit LLDP PDU in the same VLAN. ■ Flooding: transmit LLDP PDU for all port. |

| | |
|---|---|
| <ul style="list-style-type: none"> • Transmission Interval | <p>The switch is periodically transmitting LLDP frames to its neighbors for having the network discovery information up-to-date. The interval between each LLDP frame is determined by the Transmission Interval value. Valid values are restricted to 5 - 32768 seconds.</p> <p>Default: 30 seconds</p> <p>This attribute must comply with the following rule:</p> <p>$(\text{Transmission Interval} * \text{Hold Time Multiplier}) \leq 65536$, and $\text{Transmission Interval} \geq (4 * \text{Delay Interval})$</p> |
| <ul style="list-style-type: none"> • Holdtime Multiplier | <p>Each LLDP frame contains information about how long the information in the LLDP frame shall be considered valid. The LLDP information valid period is set to Holdtime multiplied by Transmission Interval seconds. Valid values are restricted to 2 - 10 times.</p> <p>TTL in seconds is based on the following rule:</p> <p>$(\text{Transmission Interval} * \text{Holdtime Multiplier}) \leq 65536$.</p> <p>Therefore, the default TTL is $4 * 30 = 120$ seconds.</p> |
| <ul style="list-style-type: none"> • Reinitialization Delay | <p>When a port is disabled, LLDP is disabled or the switch is rebooted a LLDP shutdown frame is transmitted to the neighboring units, signaling that the LLDP information isn't valid anymore. Tx Reinit controls the amount of seconds between the shutdown frame and a new LLDP initialization. Valid values are restricted to 1 - 10 seconds.</p> |
| <ul style="list-style-type: none"> • Transmit Delay | <p>If some configuration is changed (e.g. the IP address) a new LLDP frame is transmitted, but the time between the LLDP frames will always be at least the value of Transmit Delay seconds. Transmit Delay cannot be larger than 1/4 of the Transmission Interval value. Valid values are restricted to 1 - 8192 seconds.</p> <p>This attribute must comply with the rule:</p> <p>$(4 * \text{Delay Interval}) \leq \text{Transmission Interval}$</p> |
| <ul style="list-style-type: none"> • LLDP-MED Fast Start Repeat Count | <p>Configures the amount of LLDP MED Fast Start LLDPDUs to transmit during the activation process of the LLDP-MED Fast Start mechanism.</p> <p>Range: 1-10 packets;</p> <p>Default: 3 packets</p> <p>The MED Fast Start Count parameter is part of the timer which ensures that the LLDP-MED Fast Start mechanism is active for the port. LLDP-MED Fast Start is critical to the timely startup of LLDP, and therefore integral to the rapid availability of Emergency Call Service.</p> |

The page includes the following fields:

| Object | Description |
|------------------------|--|
| • Port | The switch port number of the logical port |
| • Selected VLAN | Display the currently selected VLAN |

4.3.3.4 LLDP Local Device

Use the LLDP Local Device Information screen to display information about the switch, such as its **MAC address**, **chassis ID**, **management IP address**, and **port information**. The Local Device Summary and Port Status screens in [Figure 4-3-33](#) and [Figure 4-3-34](#) appear.

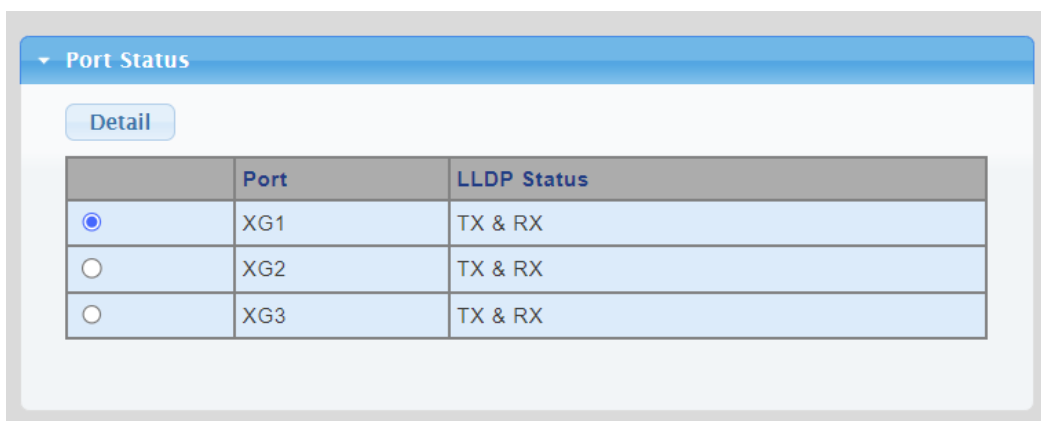

| Local Device Summary | |
|------------------------|-------------------|
| Chassis ID Subtype | MAC Address |
| Chassis ID | 00:30:4F:AF:FF:81 |
| System Name | GSD-1002M |
| System Description | V1 |
| Capabilities Supported | Bridge |
| Capabilities Enabled | Bridge |
| Port ID Subtype | Interface name |

Figure 4-3-33 Local Device Summary Screenshot

The page includes the following fields:

| Object | Description |
|---------------------------------|--|
| • Chassis ID Subtype | Display the current chassis ID subtype |
| • Chassis ID | Display the current chassis ID |
| • System Name | Display the current system name |
| • System Description | Display the current system description |
| • Capabilities Supported | Display the current capabilities supported |
| • Capabilities Enabled | Display the current capabilities enabled |
| • Port ID Subtype | Display the current port ID subtype |

| Port Status | | |
|----------------------------------|------|-------------|
| Detail | | |
| | Port | LLDP Status |
| <input checked="" type="radio"/> | XG1 | TX & RX |
| <input type="radio"/> | XG2 | TX & RX |
| <input type="radio"/> | XG3 | TX & RX |

Figure 4-3-34 Port Status Screenshot

The page includes the following fields:

| Object | Description |
|--------------------------|---|
| • Interface | The switch port number of the logical port. |
| • LLDP Status | Display the current LLDP status |
| • LLDP MED Status | Display the current LLDP MED Status |

4.3.3.5 LLDP Remove Device

This page provides a status overview for all LLDP remove devices. The displayed table contains a row for each port on which an LLDP neighbor is detected. The LLDP Remove Device screen in [Figure 4-3-35](#) appears.

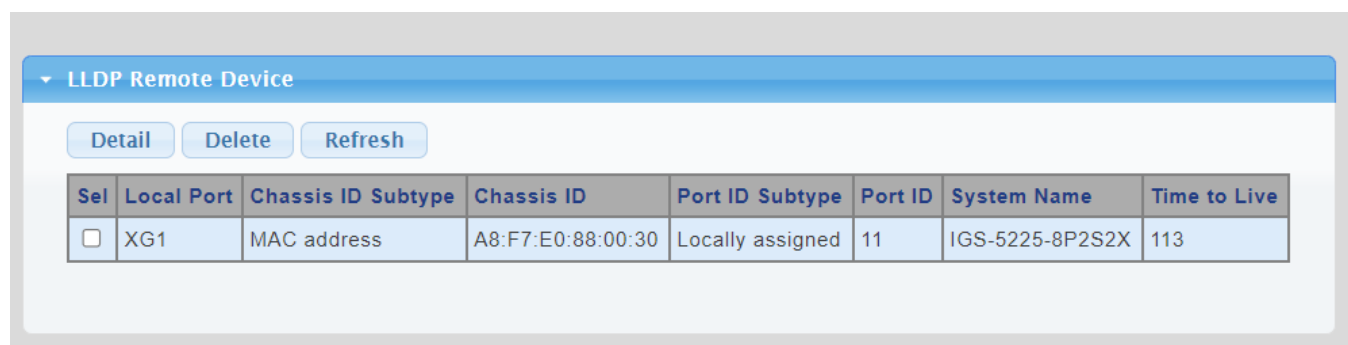

Figure 4-3-35 LLDP Remote Device Screenshot

The page includes the following fields:

| Object | Description |
|-----------------------------|--|
| • Local Port | Display the current local port |
| • Chassis ID Subtype | Display the current chassis ID subtype |
| • Chassis ID | The Chassis ID is the identification of the neighbor's LLDP frames |
| • Port ID Subtype | Display the current port ID subtype |
| • Port ID | The Remote Port ID is the identification of the neighbor port |
| • System Name | System Name is the name advertised by the neighbor unit |
| • Time to Live | Display the current time to live |

Buttons

Delete : Click to delete LLDP remove device entry.

Refresh : Click to refresh LLDP remove device.

4.3.3.6 LLDP Statistics

Use the LLDP Device Statistics screen to general statistics for LLDP-capable devices attached to the switch, and for LLDP protocol messages transmitted or received on all local interfaces. The LLDP Global and Port Statistics screens in [Figure 4-3-36](#) and [Figure 4-3-37](#) appear.

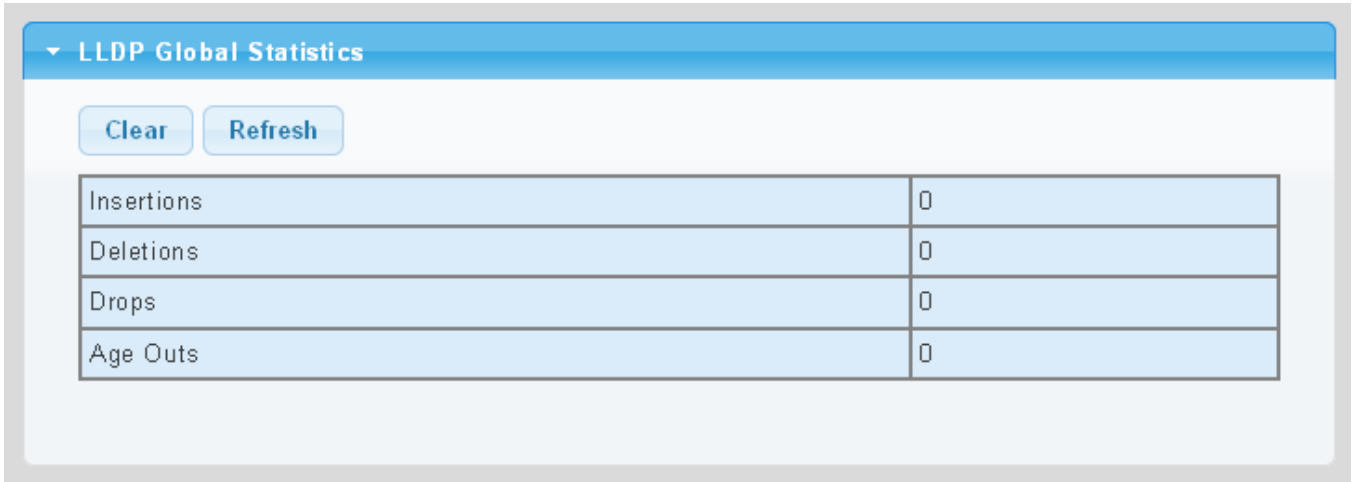

Figure 4-3-36 LLDP Global Statistics Screenshot

The page includes the following fields:

| Object | Description |
|---------------------|--|
| • Insertions | Shows the number of new entries added since switch reboot.\ |
| • Deletions | Shows the number of new entries deleted since switch reboot.\ |
| • Drops | Shows the number of LLDP frames dropped due to that the entry table was full.\ |
| • Age Outs | Shows the number of entries deleted due to Time-To-Live expiring.\ |

Buttons

Clear: Click to clear the statistics

Refresh: Click to refresh the statistics

LLDP Port Statistics

| Port | TX Frames | RX Frames | | | RX TLVs | | RX Ageouts |
|------|-----------|-----------|-----------|--------|-----------|--------------|------------|
| | Total | Total | Discarded | Errors | Discarded | Unrecognized | Total |
| XG1 | 2 | 5 | 0 | 0 | 0 | 0 | 0 |
| XG2 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| XG3 | 2 | 0 | 0 | 0 | 0 | 0 | 0 |

Figure 4-3-37 LLDP Port Statistics Screenshot

The page includes the following fields:

| Object | Description |
|--------------------------|---|
| • Port | The port on which LLDP frames are received or transmitted |
| • TX Frame – Total | The number of LLDP frames transmitted on the port |
| • RX Frame – Total | The number of LLDP frames received on the port |
| • RX Frame – Discarded | If an LLDP frame is received on a port, and the switch's internal table has run full, the LLDP frame is counted and discarded. This situation is known as "Too Many Neighbors" in the LLDP standard. LLDP frames require a new entry in the table when the Chassis ID or Remote Port ID is not already contained within the table. Entries are removed from the table when a given port links down, an LLDP shutdown frame is received, or when the entry ages out. |
| • RX Frame – Error | The number of received LLDP frames containing some kind of error. |
| • RX TLVs – Discarded | Each LLDP frame can contain multiple pieces of information, known as TLVs (TLV is short for "Type Length Value"). If a TLV is malformed, it is counted and discarded. |
| • RX TLVs – Unrecognized | The number of well-formed TLVs, but with an unknown type value |
| • RX Ageout - Total | The number of organizationally TLVs received |

4.3.4 MAC Address Table

Switching of frames is based upon the DMAC address contained in the frame. The Managed Media Converter builds up a table that maps MAC addresses to switch ports for knowing which ports the frames should go to (based upon the DMAC address in the frame). This table contains both static and dynamic entries. The static entries are configured by the network administrator if the administrator wants to do a fixed mapping between the DMAC address and switch ports.

The frames also contain a MAC address (SMAC address), which shows the MAC address of the equipment sending the frame. The SMAC address is used by the switch to automatically update the MAC table with these dynamic MAC addresses. Dynamic entries are removed from the MAC table if no frame with the corresponding SMAC address has been seen after a configurable age time.

4.3.4.1 Static MAC Setting

The static entries in the MAC table are shown in this table. The MAC table is sorted first by VLAN ID and then by MAC address. The Static MAC Setting screens in [Figure 4-3-38](#) and [Figure 4-3-39](#) appear.

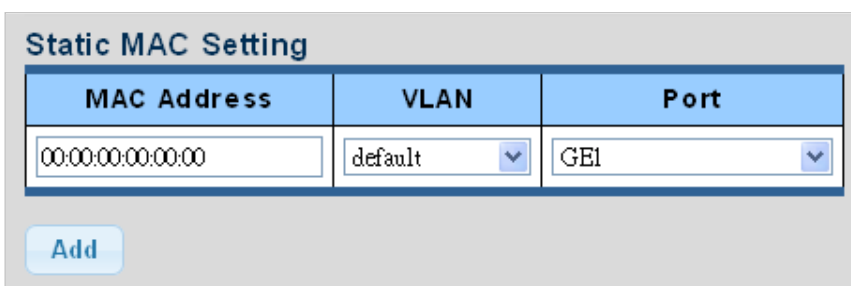

Figure 4-3-38 Statics MAC Setting Screenshot

The page includes the following fields:

| Object | Description |
|---------------|---|
| • MAC Address | Physical address associated with this interface |
| • VLAN | Select VLAN from this drop-down list |
| • Port | Select port from this drop-down list |

Buttons

Add : Click to add new static MAC address.

Figure 4-3-39 Statics MAC Status Screenshot

The page includes the following fields:

| Object | Description |
|---------------|---|
| • No. | This is the number for entries |
| • MAC Address | The MAC address for the entry |
| • VLAN | The VLAN ID for the entry |
| • Port | Display the current port |
| • Delete | Click Delete to delete static MAC status entry |

4.3.4.2 MAC Filtering

By filtering MAC address, the switch can easily filter the per-configured MAC address and reduce the un-safety. The Static MAC Setting screens in [Figure 4-3-40](#) and [Figure 4-3-41](#) appear.

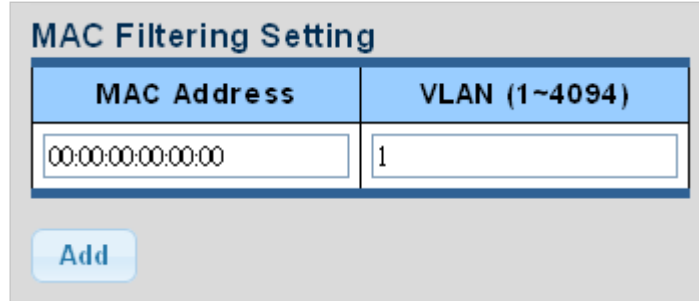

Figure 4-3-40 MAC Filtering Setting Screenshot

The page includes the following fields:

| Object | Description |
|------------------------|---|
| • MAC Address | Physical address associated with this interface |
| • VLAN (1~4096) | Indicates the ID of this particular VLAN |

Buttons

Add: Click to add new MAC filtering setting.

Figure 4-3-41 Statics MAC Status Screenshot

The page includes the following fields:

| Object | Description |
|----------------------|--|
| • No. | This is the number for entries |
| • MAC Address | The MAC address for the entry |
| • VLAN | The VLAN ID for the entry |
| • Delete | Click Delete to delete static MAC status entry. |

4.3.4.3 Dynamic Address Setting

By default, dynamic entries are removed from the MAC table after 300 seconds. The Dynamic Address Setting/Status screens in Figure 4-3-42 and Figure 4-3-43 appear.

Figure 4-3-42 Dynamic Addresses Setting Screenshot

The page includes the following fields:

| Object | Description |
|---|--|
| <ul style="list-style-type: none"> • Aging Time | The time after which a learned entry is discarded Range: 10-630 seconds; Default: 300 seconds |

Buttons

: Click to apply changes.

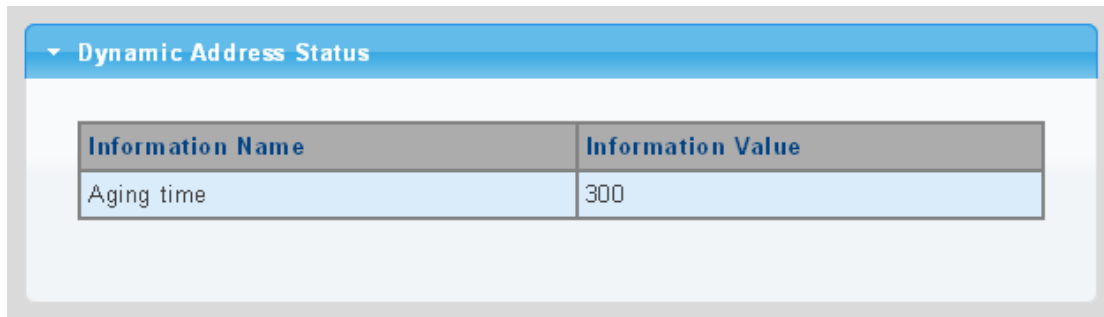

Figure 4-3-43 Dynamic Addresses Status Screenshot

The page includes the following fields:

| Object | Description |
|---|--------------------------------|
| <ul style="list-style-type: none"> • Aging Time | Display the current aging time |

4.3.4.4 Dynamic Learned

Dynamic MAC Table

Dynamic Learned MAC Table is shown on this page. The MAC Table is sorted first by VLAN ID and then by MAC address. The Dynamic Learned screens in [Figure 4-3-44](#) and [Figure 4-3-45](#) appear.

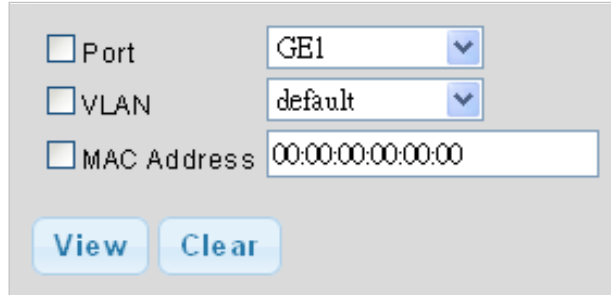

Figure 4-3-44 Dynamic Learned Screenshot

The page includes the following fields:

| Object | Description |
|---------------|---|
| • Port | Select port from this drop-down list |
| • VLAN | Select VLAN from this drop-down list |
| • MAC Address | Physical address associated with this interface |

Buttons

View: Refreshes the displayed table starting from the "Start from MAC address" and "VLAN" input fields

Clear: Flushes all dynamic entries

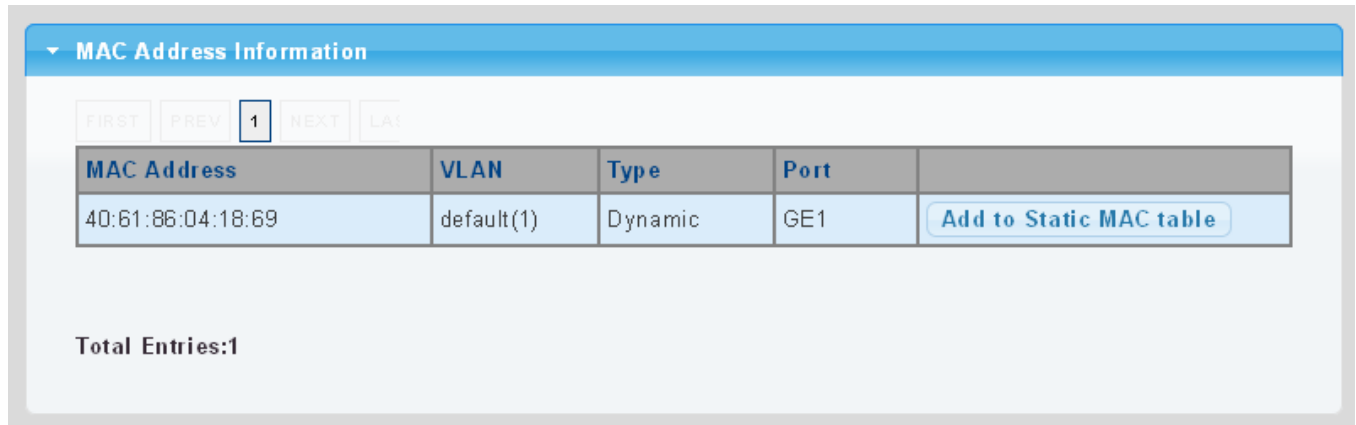

Figure 4-3-45 MAC Address Information Screenshot

| Object | Description |
|---------------|--|
| • MAC Address | The MAC address of the entry |
| • VLAN | The VLAN ID of the entry |
| • Type | Indicates whether the entry is a static or dynamic entry |
| • Port | The ports that are members of the entry |

Buttons

Add to Static MAC table: Click to add dynamic MAC address to static MAC address.

4.4 Quality of Service

4.4.1 Understanding QoS

Quality of Service (QoS) is an advanced traffic prioritization feature that allows you to establish control over network traffic. QoS enables you to assign various grades of network service to different types of traffic, such as multi-media, video, protocol-specific, time critical, and file-backup traffic.

QoS reduces bandwidth limitations, delay, loss, and jitter. It also provides increased reliability for delivery of your data and allows you to prioritize certain applications across your network. You can define exactly how you want the switch to treat selected applications and types of traffic.

You can use QoS on your system to:

- Control a wide variety of network traffic by:
- Classifying traffic based on packet attributes.
- Assigning priorities to traffic (for example, to set higher priorities to time-critical or business-critical applications).
- Applying security policy through traffic filtering.
- Provide predictable throughput for multimedia applications such as video conferencing or voice over IP by minimizing delay and jitter.
- Improve performance for specific types of traffic and preserve performance as the amount of traffic grows.
- Reduce the need to constantly add bandwidth to the network.
- Manage network congestion.

To implement QoS on your network, you need to carry out the following actions:

1. Define a service level to determine the priority that will be applied to traffic.
2. Apply a classifier to determine how the incoming traffic will be classified and thus treated by the Switch.
3. Create a QoS profile which associates a service level and a classifier.
4. Apply a QoS profile to a port(s).

The **QoS** page of the Managed Media Converter contains three types of QoS mode - the **802.1p** mode, **DSCP** mode or **Port-base** mode can be selected. Both the three mode rely on predefined fields within the packet to determine the output queue.

- **802.1p Tag Priority Mode** –The output queue assignment is determined by the IEEE 802.1p VLAN priority tag.
- **IP DSCP Mode** - The output queue assignment is determined by the TOS or DSCP field in the IP packets.
- **Port-Base Priority Mode** – Any packet received from the specify high priority port will treated as a high priority packet.

The Managed Media Converter supports **eight priority level** queue, the queue service rate is based on the **WRR(Weight Round Robin)** and **WFQ (Weighted Fair Queuing)** alorithm. The WRR ratio of high-priority and low-priority can be set to “**4:1** and **8:1**.”

4.4.2 General

4.4.2.1 QoS Properties

The QoS Global Setting and Information screen in [Figure 4-4-1](#) & [Figure 4-4-2](#) appear.

| • Trust Mode | Display the current trust type. |

4.4.4 Bandwidth Control

Configure the switch port rate limit for the switch port on this page.

4.4.4.1 Ingress Bandwidth Control

This page provides to select the ingress bandwidth preamble. The Ingress Bandwidth Control Setting and Status screens in Figure 4-4-17 & Figure 4-4-18 appear.

The screenshot shows a web interface titled "Ingress Bandwidth Control Settings". It contains a table with three columns: "Port", "State", and "Rate(Kbps)". Under "Port", there is a dropdown menu labeled "Select Ports". Under "State", there are radio buttons for "Disable" (selected) and "Enable". Under "Rate(Kbps)", there is a text input field with a range "(16-1000000)" to its right. Below the table is an "Apply" button.

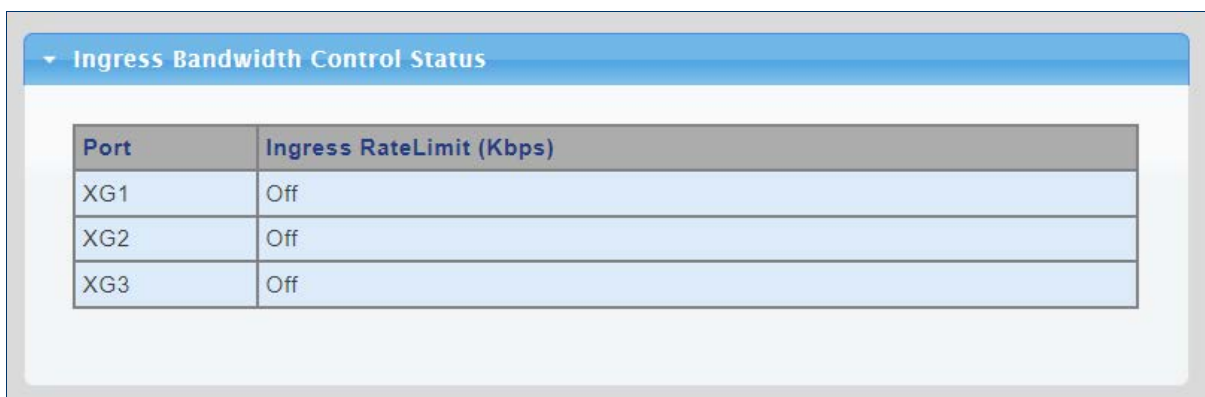

Figure 4-4-17 Ingress Bandwidth Control Settings Screenshot

The page includes the following fields:

| Object | Description |
|---------------|---|
| • Port | Select port number for this drop down list. |
| • State | Enable or disable the port rate policer. The default value is "Disabled". |
| • Rate (Kbps) | Configure the rate for the port policer. The default value is "unlimited". Valid values are in the range 16 to 1000000. |

Buttons

: Click to apply changes.

The screenshot shows a web interface titled "Ingress Bandwidth Control Status". It contains a table with two columns: "Port" and "Ingress RateLimit (Kbps)". The table lists three ports: XG1, XG2, and XG3, all with a status of "Off".

Figure 4-4-18 Ingress Bandwidth Control Status Screenshot

The page includes the following fields:

| Object | Description |
|-----------------------------|---|
| • Port | The switch port number of the logical port. |
| • Ingress Rate Limit (Kbps) | Display the current ingress rate limit. |

4.4.4.2 Egress Bandwidth Control

This page provides to select the egress bandwidth preamble. The Egress Bandwidth Control Setting and Status screens in Figure 4-4-19 & Figure 4-4-20 appear.

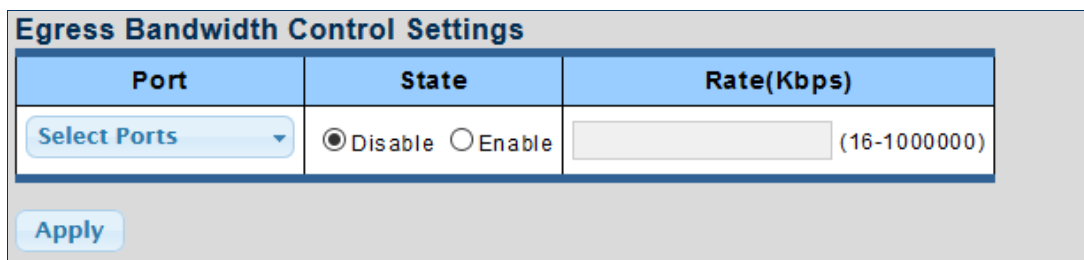

Figure 4-4-19 Egress Bandwidth Control Settings Screenshot

The page includes the following fields:

| Object | Description |
|---------------|---|
| • Port | Select port number for this drop down list. |
| • State | Enable or disable the port rate policer. The default value is "Disabled". |
| • Rate (Kbps) | Configure the rate for the port policer. The default value is "unlimited". Valid values are in the range 16 to 1000000. |

Buttons

 : Click to apply changes.

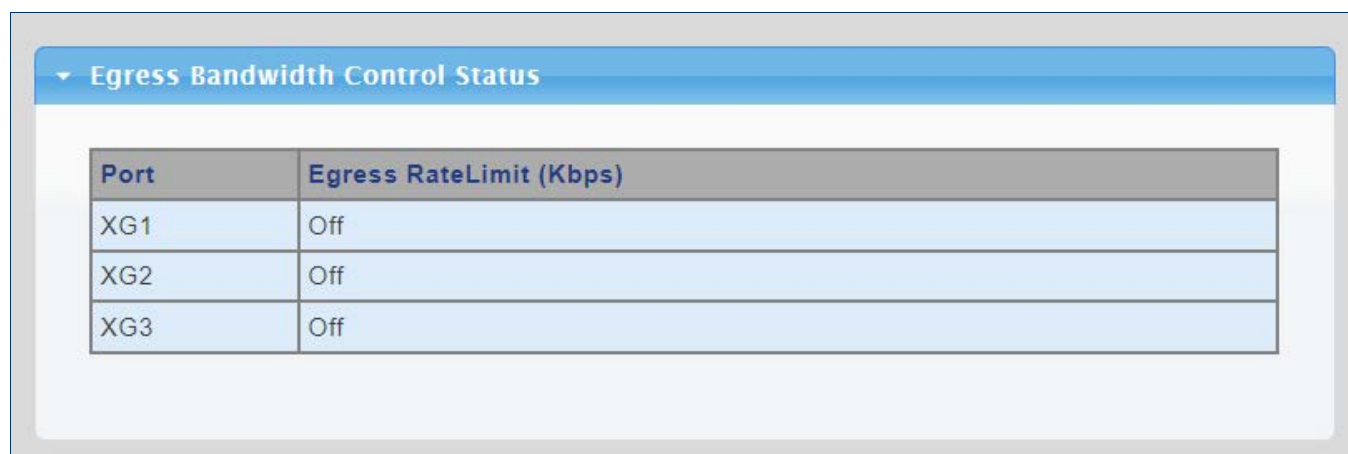

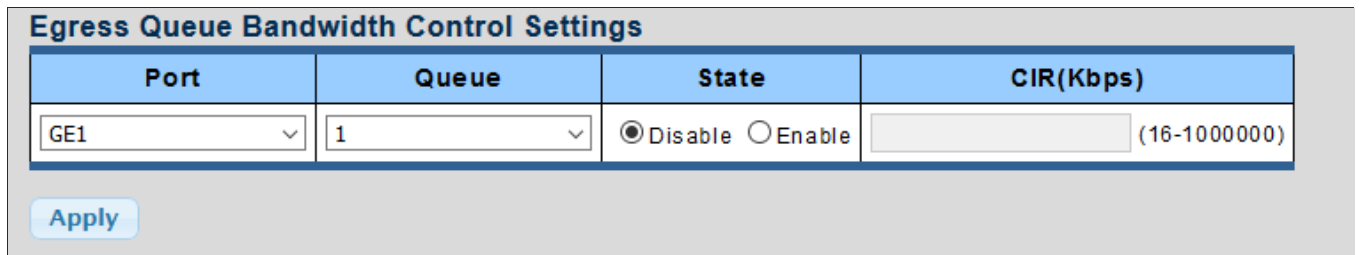

Figure 4-4-20 Egress Bandwidth Control Status Screenshot

The page includes the following fields:

| Object | Description |
|----------------------------|---|
| • Port | The switch port number of the logical port. |
| • Egress Rate Limit (Kbps) | Display the current egress rate limit. |

4.4.4.3 Egress Queue

The Egress Queue Bandwidth Control Settings and Status screens in [Figure 4-4-21](#) & [Figure 4-4-22](#) appear.

Egress Queue Bandwidth Control Settings

| Port | Queue | State | CIR(Kbps) |

| • Queue ID | Display the current queue ID. |
| • Rate Limit (Kbps) | Display the current rate limit. |

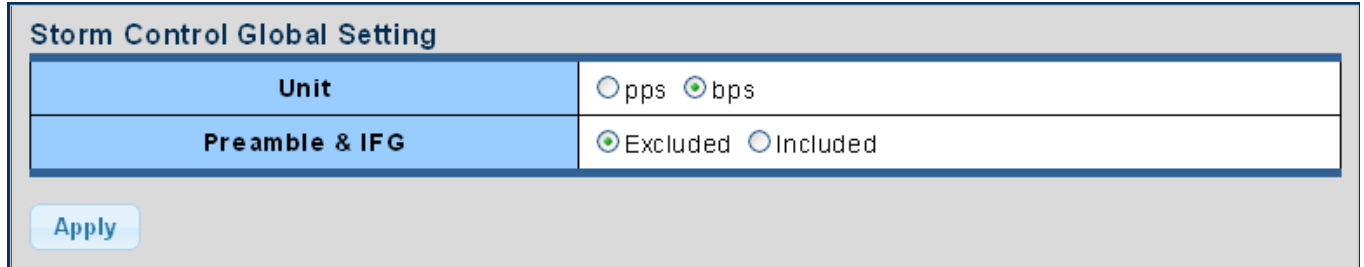

4.4.5 Storm Control

Storm control for the switch is configured on this Page.

There is an unknown unicast storm rate control, unknown multicast storm rate control, and a broadcast storm rate control. These only affect flooded frames, i.e. frames with a (VLAN ID, DMAC) pair not present on the MAC Address table.

4.4.5.1 Global Setting

The Storm Control Global Setting and Information screens in [Figure 4-4-23](#) & [Figure 4-4-24](#) appear.

The screenshot shows a configuration window titled "Storm Control Global Setting". It contains two rows of settings:

| | |
|---------------------------|--|
| Unit | <input type="radio"/> pps <input checked="" type="radio"/> bps |
| Preamble & IFG | <input checked="" type="radio"/> Excluded <input type="radio"/> Included |

Below the settings is an "Apply" button.

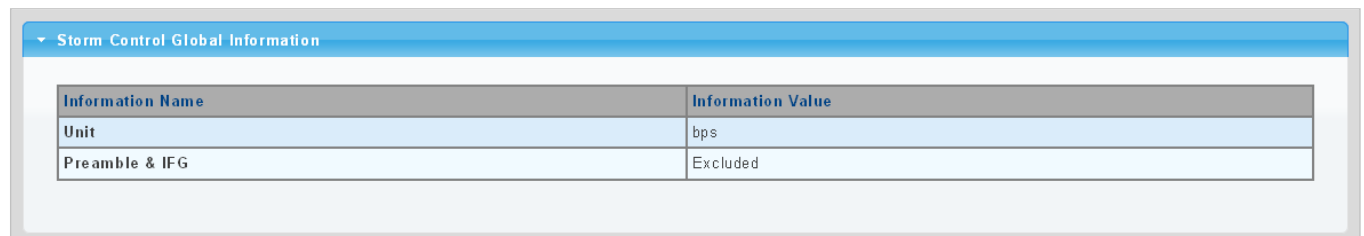

Figure 4-4-23 Storm Control Global Setting Screenshot

The page includes the following fields:

| Object | Description |
|------------------|--|
| • Unit | Controls the unit of measure for the storm control rate as "pps" or "bps". The default value is "bps". |
| • Preamble & IFG | Set the excluded or included interframe gap |

Buttons

: Click to apply changes.

The screenshot shows an information window titled "Storm Control Global Information". It displays the current settings in a table:

| Information Name | Information Value |
|------------------|-------------------|
| Unit | bps |
| Preamble & IFG | Excluded |

Figure 4-4-24 Storm Control Global Information Screenshot

The page includes the following fields:

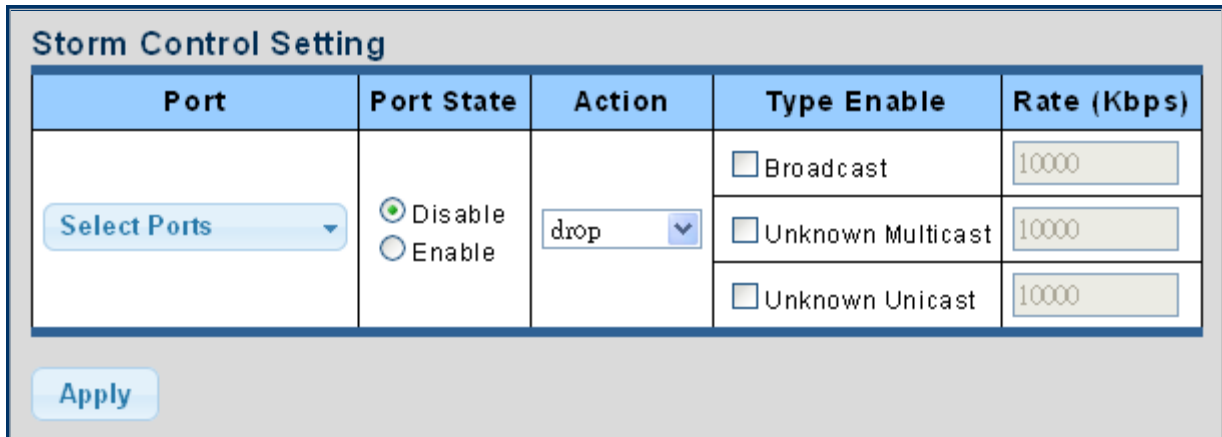

| Object | Description |
|------------------|-------------------------------------|
| • Unit | Display the current unit. |
| • Preamble & IFG | Display the current preamble & IFG. |

4.4.5.2 Port Setting

Storm control for the switch is configured on this page. There are three types of storm rate control:

- **Broadcast** storm rate control
- **Unknown Multicast** storm rate control
- **Unknown Unicast** storm rate control

The configuration indicates the permitted packet rate for unknown unicast, unknown multicast, or broadcast traffic across the switch. The Storm Control Configuration screens in [Figure 4-4-25](#) & [Figure 4-4-26](#) appear.

The screenshot shows a web interface titled "Storm Control Setting". It features a table with the following columns: Port, Port State, Action, Type Enable, and Rate (Kbps). The "Port" column contains a "Select Ports" dropdown menu. The "Port State" column has radio buttons for "Disable" (selected) and "Enable". The "Action" column has a dropdown menu set to "drop". The "Type Enable" column has three rows, each with a checkbox and a label: "Broadcast", "Unknown Multicast", and "Unknown Unicast". The "Rate (Kbps)" column has three corresponding input fields, each containing the value "10000". Below the table is an "Apply" button.

Figure 4-4-25 Storm Control Setting Screenshot

The page includes the following fields:

| Object | Description |
|--------------------------|--|
| • Port | Select port for this drop down list. |
| • Port State | Enable or disable the storm control status for the given storm type. |
| • Action | Configures the action performed when storm control is over rate on a port. Valid values are Shutdown or Drop . |
| • Type Enable | The settings in a particular row apply to the frame type listed here: <ul style="list-style-type: none"> ■ Broadcast ■ Unknown Multicast ■ Unknown Unicast |
| • Rate (kbps/pps) | Configure the rate for the storm control. The default value is "10,000". |

Buttons

: Click to apply changes

| Storm Control Information | | | | | |
|---------------------------|------------|------------------|--------------------------|------------------------|--------|
| Port | Port State | Broadcast (Kbps) | Unknown Multicast (Kbps) | Unknown Unicast (Kbps) | Action |
| XG1 | Disable | Off (10000) | Off (10000) | Off (10000) | Drop |
| XG2 | Disable | Off (10000) | Off (10000) | Off (10000) | Drop |
| XG3 | Disable | Off (10000) | Off (10000) | Off (10000) | Drop |

Figure 4-4-26 Storm Control Information Screenshot

The page includes the following fields:

| Object | Description |
|--------------------------------|---|
| • Port | The switch port number of the logical port. |
| • Port State | Display the current port state. |
| • Broadcast (Kbps/pps) | Display the current broadcast storm control rate. |
| • Unknown Multicast (Kbps/pps) | Display the current unknown multicast storm control rate. |
| • Unknown Unicast (Kbps/pps) | Display the current unknown unicast storm control rate. |
| • Action | Display the current action. |

4.5 Security

This section is to control the access of the Managed Media Converter, including the user access and management control.

The Security Page contains links to the following main topics:

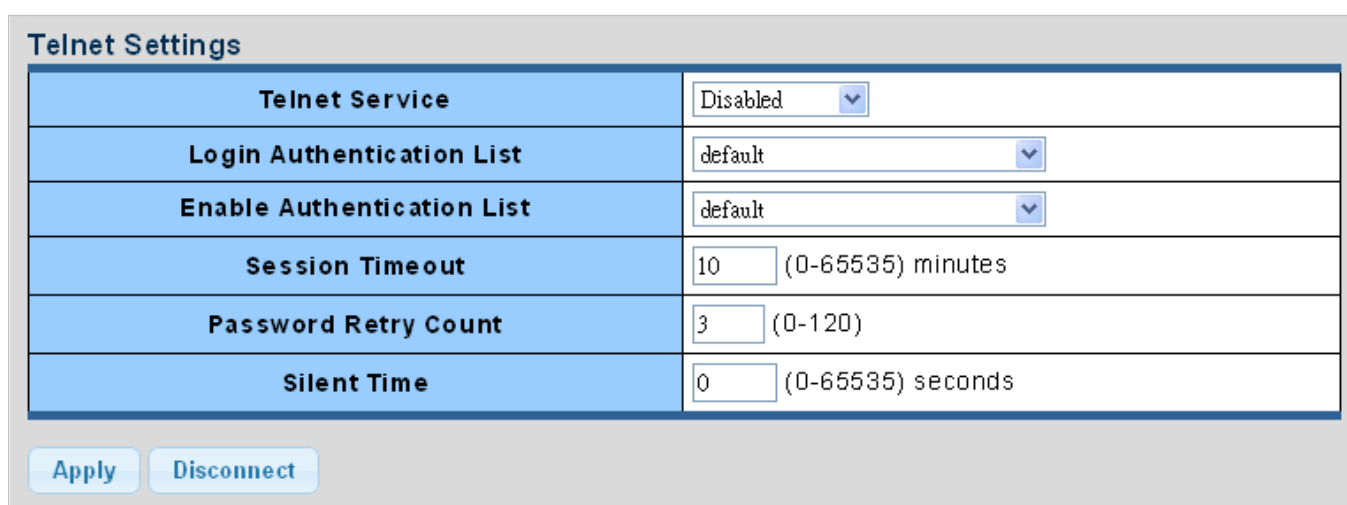

- **Access Security**

4.5.1 Access Security

This section is to control the access of the Managed Media Converter, including the different access methods – Telnet, SSH, HTTP and HTTPS.

4.5.1.1 Telnet

The Telnet Settings and Information screen in [Figure 4-5-1](#) & [Figure 4-5-2](#) appear.

| Telnet Settings | |
|-----------------------------------|---|
| Telnet Service | Disabled <input type="button" value="v"/> |
| Login Authentication List | default <input type="button" value="v"/> |
| Enable Authentication List | default <input type="button" value="v"/> |
| Session Timeout | <input type="text" value="10"/> (0-65535) minutes |
| Password Retry Count | <input type="text" value="3"/> (0-120) |
| Silent Time | <input type="text" value="0"/> (0-65535) seconds |

Figure 4-5-1 Telnet Settings Screenshot

The page includes the following fields:

| Object | Description |
|-------------------------------------|--|
| • Telnet Service | Disable or enable telnet service. |
| • Login Authentication List | Select login authentication list for this drop down list. |
| • Enable Authentication List | Select enable authentication list for this drop down list. |
| • Session Timeout | Set the session timeout value. |
| • Password Retry Count | Set the password retry count value. |
| • Silent Time | Set the silent time value. |

Buttons

: Click to apply changes

: Click to disconnect telnet communication

▼ Telnet Information

| Information Name | Information Value |
|-------------------------------|-------------------|
| Telnet Service | Disabled |
| Login Authentication List | default |
| Enable Authentication List | default |
| Session Timeout | 10 |
| Password Retry Count | 3 |
| Silent Time | 0 |
| Current Telnet Sessions Count | 0 |

Figure 4-5-2 Telnet Information Screenshot

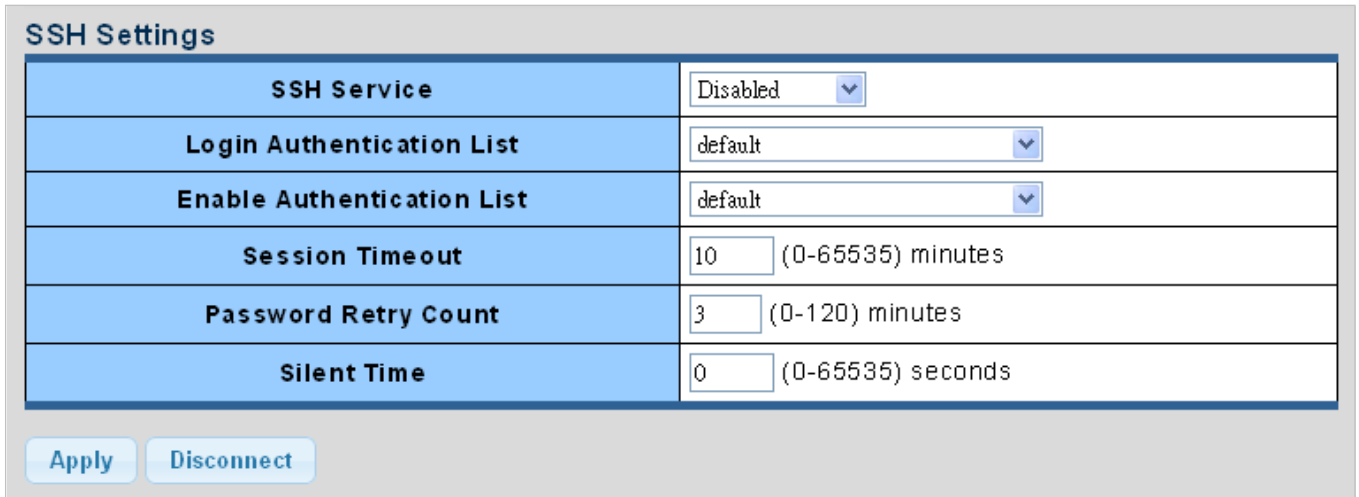

The page includes the following fields:

| Object | Description |
|---------------------------------------|---|
| • Telnet Service | Display the current Telnet service. |
| • Login Authentication List | Display the current login authentication list. |
| • Enable Authentication List | Display the current enable authentication list. |
| • Session Timeout | Display the current session timeout. |
| • Password Retry Count | Display the current password retry count. |
| • Silent Time | Display the current silent time. |
| • Current Telnet Session Count | Display the current telnet session count |

4.5.1.2 SSH

Configure SSH on this Page. This Page shows the Port Security status. Port Security is a module with no direct configuration. Configuration comes indirectly from other modules - the user modules. When a user module has enabled port security on a port, the port is set-up for software-based learning. In this mode, frames from unknown MAC addresses are passed on to the port security module, which in turn asks all user modules whether to allow this new MAC address to forward or block it. For a MAC address to be set in the forwarding state, all enabled user modules must unanimously agree on allowing the MAC address to forward. If only one chooses to block it, it will be blocked until that user module decides otherwise.

The SSH Settings and Information screens in [Figure 4-5-3](#) & [Figure 4-5-4](#) appear.

| SSH Settings | |
|----------------------------|----------------------|
| SSH Service | Disabled |
| Login Authentication List | default |
| Enable Authentication List | default |
| Session Timeout | 10 (0-65535) minutes |
| Password Retry Count | 3 (0-120) minutes |
| Silent Time | 0 (0-65535) seconds |

Apply Disconnect

Figure 4-5-3 SSH Settings Screenshot

The page includes the following fields:

| Object | Description |
|------------------------------|--|
| • SSH Service | Disable or enable SSH service. |
| • Login Authentication List | Select login authentication list for this drop down list. |
| • Enable Authentication List | Select enable authentication list for this drop down list. |
| • Session Timeout | Set the session timeout value. |
| • Password Retry Count | Set the password retry count value. |
| • Silent Time | Set the silent time value. |

Buttons

Apply : Click to apply changes.

Disconnect : Click to disconnect telnet communication.

| SSH Information | |
|----------------------------|-------------------|
| Information Name | Information Value |
| SSH Service | Disabled |

The page includes the following fields:

| Object | Description |
|--|---|
| <ul style="list-style-type: none"> • Access Profile | Display the current access profile. |
| <ul style="list-style-type: none"> • Delete | Click  to delete access profile entry. |

4.6 Ring

Use the Maintenance menu items to display and configure basic configurations of The Wall-mount Managed Media Converter. Under maintenance, the following topics are provided to back up, upgrade, save and restore the configuration. This section has the following items:

| | |
|----------------------|---|
| ■ Ring Wizard | You can quickly build an ERPS ring by wizard. |
| ■ ERPS | You can configure ERPS ring in detail. |

ITU-T G.8032 **Ethernet Ring protection switching (ERPS)** is a link layer protocol applied on Ethernet loop protection to provide sub-50ms protection and recovery switching for Ethernet traffic in a ring topology. ERPS provides a faster redundant recovery than Spanning Tree topology. The action is similar to STP or RSTP, but the algorithms between them are not the same. In the Ring topology, every switch should be enabled with Ring function and two ports should be assigned as the member ports in the ERPS. Only one switch in the Ring group would be set as the RPL owner switch that one port would be blocked, called **owner port**, and PRL neighbor switch has one port that one port would be blocked, called **neighbor port** that connect to owner port directly and this link is called the **Ring Protection Link** or **RPL**. Each switch will send ETH-CCM message to check the link status in the ring group. When the failure of network connection occurs, the nodes block the failed link and report the signal failure message, the RPL owner switch will automatically unblocks the PRL to recover from the failure.

4.6.1 Ring Wizard

This page allows the user to configure the ERPS by wizard; screen in [Figure 4-6-1](#) appears.

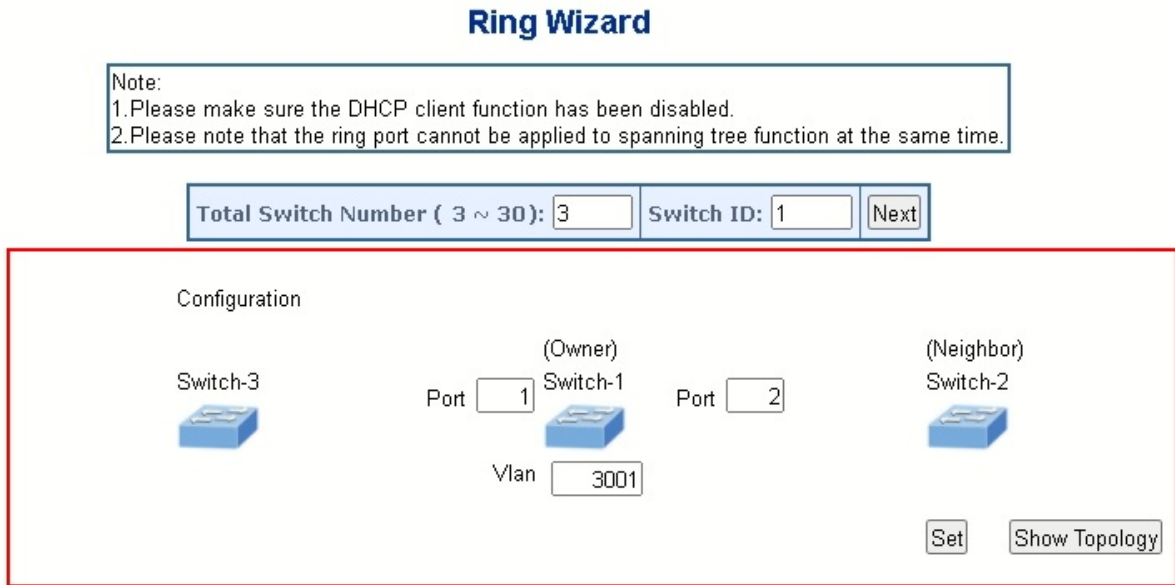

Figure 4-6-1 Ring Wizard page screenshot

The page includes the following fields:

| Object | Description |
|--|--|
| <ul style="list-style-type: none"> All Switch Numbers | Set all the switch numbers for the ring group. The default number is 3 and maximum number is 30. |
| <ul style="list-style-type: none"> Number ID | The switch where you are requesting ERPS. |
| <ul style="list-style-type: none"> Port | Configures the port number for the MEP. |
| <ul style="list-style-type: none"> VLAN | Set the ERPS VLAN. |

Buttons

: Click to configure ERPS.

: Click to save changes.

: Click to show the ring topology.

4.6.2 ERPS

This page allows the user to inspect and configure the current ERPS Instance; screens in [Figure 4-6-2](#) and [Figure 4-6-3](#) appear.

Ethernet Ring Protection Switching

Note:
 1. Please make sure the DHCP client function has been disabled.
 2. Please note that the ring port can not be applied to spanning tree function at the same time.

Refresh

| Delete | Enable | ERPS ID | Version | Ring Type | Port0 | Port1 | Node ID | Control Vlan | Revertive | Guard Time | WTR Time | Holdoff Time |
|--------------------------|--------|---------|---------|-----------|-------|-------|-------------------|--------------|-----------|------------|----------|--------------|
| <input type="checkbox"/> | Yes | 1 | 2 | Major | 5 | 6 | 00:30:4f:1a:12:35 | 3001 | Yes | 500 | 1 | 0 |

Figure 4-6-2 Ethernet Ring Protocol Switch screenshot

| Object | Description |
|-----------------------|--|
| • Enable | Enables ERPS on the switch. ERPS must be enabled globally on the switch before it can enable on an ERPS ring. |
| • ERPS ID | Major ring group ID for the interconnected sub-ring. It is used to send topology change updates on major ring. If ring is major, this value is same as the protection group ID of this ring. |
| • Version | ERPS Protocol Version - v1 or v2 |
| • Ring Type | Type of Protecting ring. |
| • Port 0 | This will create a Port 0 of the switch in the ring. |
| • Port 1 | This will create "Port 1" of the switch in the Ring. As interconnected sub-ring will have only one ring port, "Port 1" is configured as "0" for interconnected sub-ring. "0" in this field indicates that no "Port 1" is associated with this instance |
| • Node ID | A MAC address unique to the ring node. The MAC address must be specified in the format xx:xx:xx:xx:xx:xx |
| • Control Vlan | VLAN configuration of the Protection Group. |
| • Revertive | ERPS Protocol Version - v1 or v2 |
| • Guard Time | Guard timeout value to be used to prevent ring nodes from receiving outdated R-APS messages. The period of the guard timer can be configured in 10 ms steps between 10 ms and 2 seconds, with a default value of 500 ms |
| • WTR Time | Remaining WTR timeout in milliseconds. |
| • Holdoff Time | The timing value to be used to make persistent check on Signal Fail before switching. The range of the hold off timer is 0 to 10 seconds in steps of 100 ms |

Buttons

Add New Protection Group: Click to add a new Protection group entry.

Refresh: Click to refresh the page immediately.

Save: Click to save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

Figure 4-6-3 Ethernet Ring Protocol Switch Configuration page screenshot

RPL Configuration:

| Object | Description |
|-------------------|--|
| • RPL Role | It can be either RPL owner or RPL Neighbor. |
| • RPL Port | This allows to select the east port or west port as the RPL block. |
| • Clear | If the owner has to be changed, then the clear check box allows to clear the RPL owner for that ERPS ring. |

Instance Command:

| Object | Description |
|--|---|
| <ul style="list-style-type: none"> • Command | Administrative command. A port can be administratively configured to be in either manual switch or forced switch state. |
| <ul style="list-style-type: none"> • Port | Port selection - Port0 or Port1 of the protection Group on which the command is applied. |

ERPS State:

| Object | Description |
|--|---|
| <ul style="list-style-type: none"> • Protection State | ERPS state according to State Transition Tables in G.8032. |
| <ul style="list-style-type: none"> • Port 0 | OK: State of East port is ok SF: State of East port is Signal Fail |
| <ul style="list-style-type: none"> • Port 1 | OK: State of West port is ok SF: State of West port is Signal Fail |
| <ul style="list-style-type: none"> • WTR Remaining | Remaining WTR timeout in milliseconds. |
| <ul style="list-style-type: none"> • RPL Un-blocked | APS is received on the working flow. |
| <ul style="list-style-type: none"> • Port 0 Block Status | Block status for Port 0 (Both traffic and R-APS block status). R-APS channel is never blocked on sub-rings without virtual channel. |
| <ul style="list-style-type: none"> • Port 1 Block Status | Block status for Port 1 (Both traffic and R-APS block status). R-APS channel is never blocked on sub-rings without virtual channel. |

4.7 Maintenance

Use the Maintenance menu items to display and configure basic configurations of the GS-4210 802.3BT PoE++ Series. Under maintenance, the following two topics are provided:

- **Switch Maintenance** You can save the configuration, reboot or reset default, configuration backup/restore of the switch on this page.
- **Diagnostics** You can run the cable diagnostics or ping IPv4/IPv6 IP address of the switch on this page.

4.7.1 Switch Maintenance

Under the switch maintenance, the following topics are provided to back up, upgrade, save and restore the configuration. This section has the following items:

| | |
|-----------------------------|--|
| ■ Save Configuration | You can save the configuration of the switch on this page. |
| ■ Factory Default | You can reset default the configuration of the switch on this page. |
| ■ Reboot Switch | You can restart the switch on this page. After restart, the switch will boot normally. |
| ■ Backup Manager | You can back up the switch configuration. |
| ■ Upgrade Manager | You can upgrade the switch configuration. |
| ■ Dual Image | Select active or backup image on this Page. |

4.7.1.1 Save Configuration

You can save the configuration of the switch on this page. The Factory Default screen in [Figure 4-7-1](#) appears.

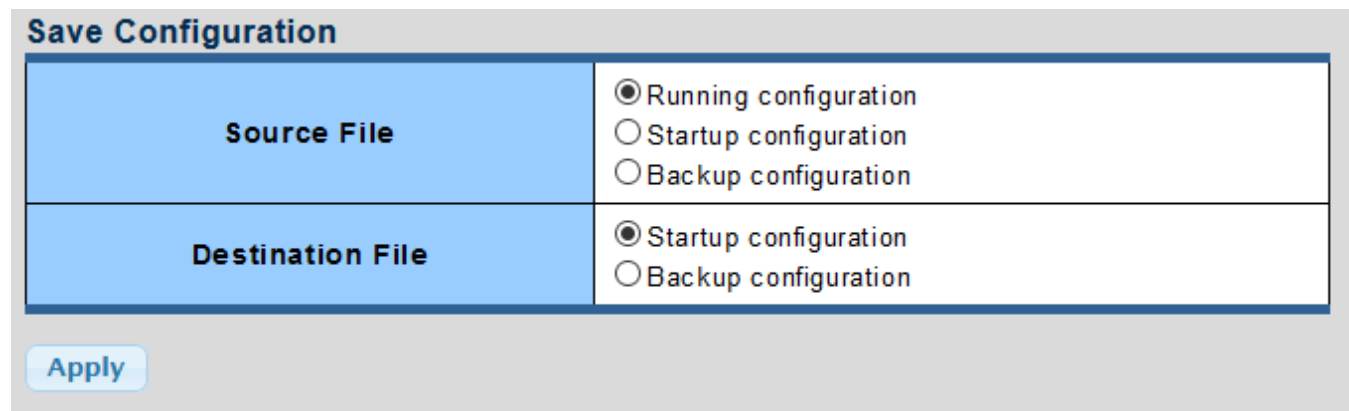

Figure 4-7-1 Save Configuration Page Screenshot

Buttons

: Click to apply changes.

4.7.1.2 Factory Default

You can reset the configuration default of the switch on this page. Only the IP configuration is retained. The new configuration is available immediately, which means that no restart is necessary. The Factory Default screen in [Figure 4-7-2](#) appears and clicks to reset the configuration to Factory Defaults.

Figure 4-7-2 Factory Default Page Screenshot

After the "Restore" button is pressed and rebooted, the system will load the default IP settings as follows:

- Default IP address: **192.168.0.100**
- Subnet mask: **255.255.255.0**
- Default Gateway: **192.168.0.254**
- The other setting value is back to disable or none.

To reset the GS-4210 802.3BT PoE++ Series to the factory default setting, you can also press the hardware reset button at the front panel for about 10 seconds. After the device is rebooted, you can log in the management Web interface within the same subnet of 192.168.0.xx.

4.7.1.3 Reboot

The **Reboot** button enables the device to be rebooted from a remote location. Once the Reboot button is pressed, user has to re-log in the Web interface for about 30 seconds. Click the Reboot button, shown in [Figure 4-7-3](#), to reboot the system.

Figure 4-7-3 Reboot Button

4.7.1.4 Backup Manager

This function allows backup of the current image or configuration of the Managed Media Converter to the local management station. The Backup Manager screen in [Figure 4-7-4](#) appears.

Backup Manager

| | |
|----------------------|---|
| Backup Method | <input type="text" value="TFTP"/> |
| Server IP | <input type="text"/> (IPv4 or IPv6 Address) |
| Backup Type | <input checked="" type="radio"/> Image <input type="radio"/> Running Configuration <input type="radio"/> Startup Configuration <input type="radio"/> Backup Configuration <input type="radio"/> Flash log <input type="radio"/> Buffered log |
| Image | <input checked="" type="radio"/> FW-GS-4210-24UP4C_v3.305b230131.bix (Active) <input type="radio"/> FW-GS-4210-24UP4C_v3.305b230131.bix (Backup) |

Figure 4-7-4 Backup Manager Page Screenshot

The page includes the following fields:

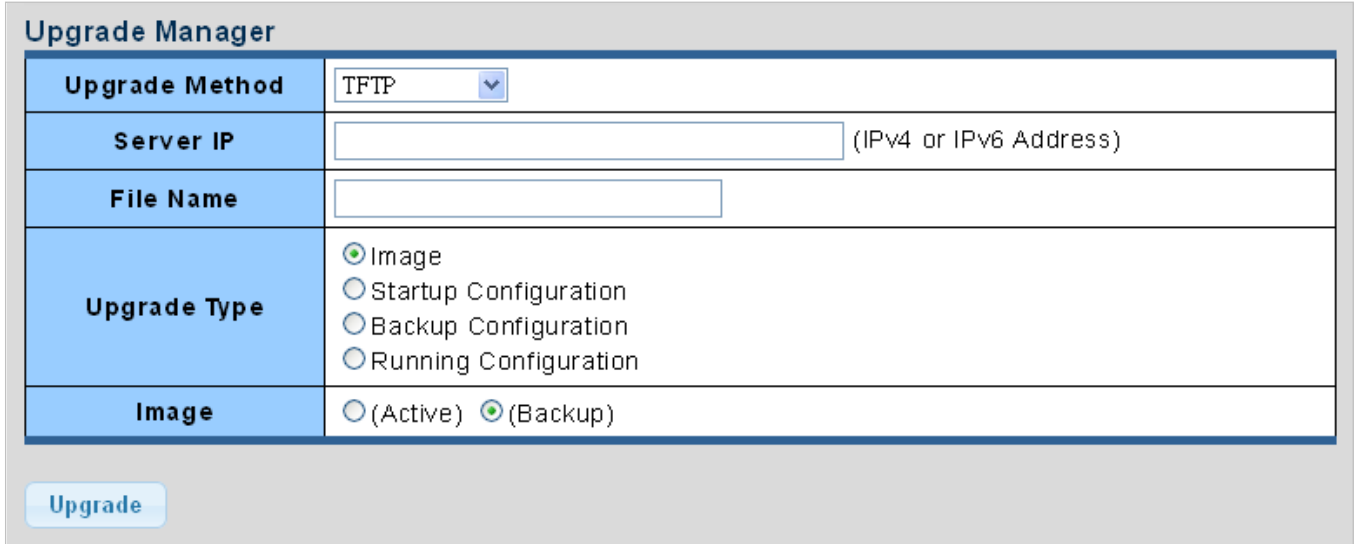

| Object | Description |
|-----------------|---|
| • Backup Method | Select backup method for this drop down list. |
| • Server IP | Fill in your TFTP server IP address. |
| • Backup Type | Select backup type. |
| • Image | Select active or backup image. |

Buttons

: Click to back up image, configuration or log.

4.7.1.5 Upgrade Manager

This function allows reloading of the current image or configuration of the Managed Media Converter to the local management station. The Upgrade Manager screen in [Figure 4-7-5](#) appears.

The screenshot shows the 'Upgrade Manager' interface. It contains a table with the following fields:

| | |
|-----------------------|--|
| Upgrade Method | TFTP |
| Server IP | <input type="text"/> (IPv4 or IPv6 Address) |
| File Name | <input type="text"/> |
| Upgrade Type | <input checked="" type="radio"/> Image <input type="radio"/> Startup Configuration <input type="radio"/> Backup Configuration <input type="radio"/> Running Configuration |
| Image | <input type="radio"/> (Active) <input checked="" type="radio"/> (Backup) |

Below the table is a blue 'Upgrade' button.

Figure 4-7-5 Upgrade Manager Page Screenshot

The page includes the following fields:

| Object | Description |
|------------------|--|
| • Upgrade Method | Select upgrade method for this drop down list. |
| • Server IP | Fill in your TFTP server IP address. |
| • File Name | The name of firmware image or configuration. |
| • Upgrade Type | Select upgrade type. |
| • Image | Select active or backup image. |

Buttons

 : Click to upgrade image or configuration.

4.7.1.6 Dual Image

This page provides information about the active and backup firmware images in the device, and allows you to revert to the backup image. The web page displays two tables with information about the active and backup firmware images. The Dual Image Configuration and Information screens in [Figure 4-7-6](#) & [Figure 4-7-7](#) appear.

Figure 4-7-6 Dual Image Configuration Page Screenshot

The page includes the following fields:

| Object | Description |
|--|-----------------------------------|
| <ul style="list-style-type: none"> Active Image | Select the active or backup image |

Buttons

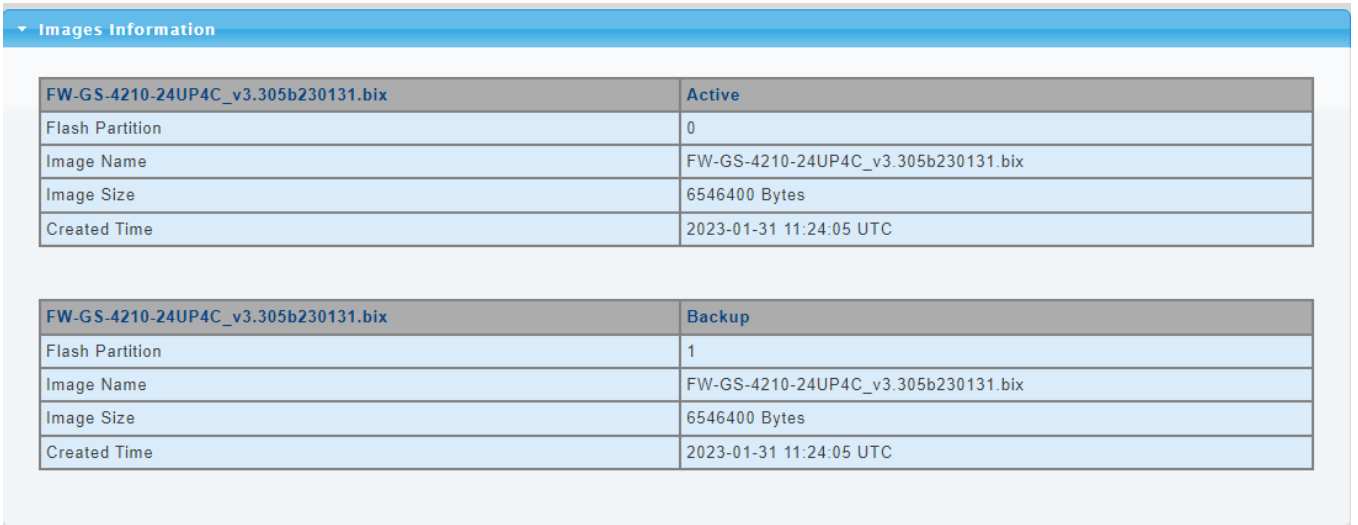

Figure 4-7-7 Dual Image Information Page Screenshot

The page includes the following fields:

| Object | Description |
|---|--------------------------------------|
| <ul style="list-style-type: none"> Flash Partition | Display the current flash partition. |
| <ul style="list-style-type: none"> Image Name | Display the current image name. |
| <ul style="list-style-type: none"> Image Size | Display the current image size. |
| <ul style="list-style-type: none"> Created Time | Display the created time. |

4.7.2 Diagnostics

This section provides the Physical layer and IP layer network diagnostics tools for troubleshooting. The diagnostic tools are designed for network manager to help them quickly diagnose problems to better serve customers.

Use the Diagnostics menu items to display and configure basic administrative details of the GS-4210 802.3BT PoE++ Series. The ping and IPv6 ping allow you to issue ICMP PING packets to troubleshoot IP connectivity issues. The GS-4210 802.3BT PoE++ Series transmits ICMP packets, and the sequence number and roundtrip time are displayed upon reception of a reply. Under System the following topics are provided to configure and view the system information:

This section has the following items:

| | |
|---|---|
|  Ping Test | You can run the IPv4 IP address ping test of the switch on this page. |
|  IPv6 Ping Test | You can run the IPv6 IP address ping test of the switch on this page. |

4.7.2.1 Ping Test

This page allows you to issue ICMP PING packets to troubleshoot IP connectivity issues. After you press “**Apply**”, ICMP packets are transmitted, and the sequence number and roundtrip time are displayed upon reception of a reply. The page refreshes automatically until responses to all packets are received, or until a timeout occurs. The ICMP Ping screen in [Figure 4-7-8](#) appears.

Ping Test Setting

| | |
|--------------------------|---|
| IP Address | <input type="text" value=""/> (x.x.x.x or hostname) |
| Count | <input type="text" value="4"/> (1 - 5 Default : 4) |
| Interval (in sec) | <input type="text" value="1"/> (1 - 5 Default : 1) |
| Size (in bytes) | <input type="text" value="64"/> (8 - 5120 Default : 64) |
| Ping Results | |

Figure 4-7-8 ICMP Ping Page Screenshot

The page includes the following fields:

| Object | Description |
|----------------------------|---|
| • IP Address | The destination IP Address. |
| • Count | Number of echo requests to send. |
| • Interval (in sec) | Send interval for each ICMP packet. |
| • Size (in bytes) | The payload size of the ICMP packet. Values range from 8bytes to 5120bytes. |
| • Ping Results | Display the current ping result. |

Buttons

: Click to transmit ICMP packets.

Be sure the target IP Address is within the same network subnet of the switch, or you have to set up the correct gateway IP address.

4.7.2.2 IPv6 Ping Test

This page allows you to issue ICMPv6 PING packets to troubleshoot IPv6 connectivity issues. After you press “**Apply**”, 5 ICMPv6 packets are transmitted, and the sequence number and roundtrip time are displayed upon reception of a reply. The page refreshes automatically until responses to all packets are received, or until a timeout occurs. The ICMPv6 Ping screen in [Figure 4-7-9](#) appears.

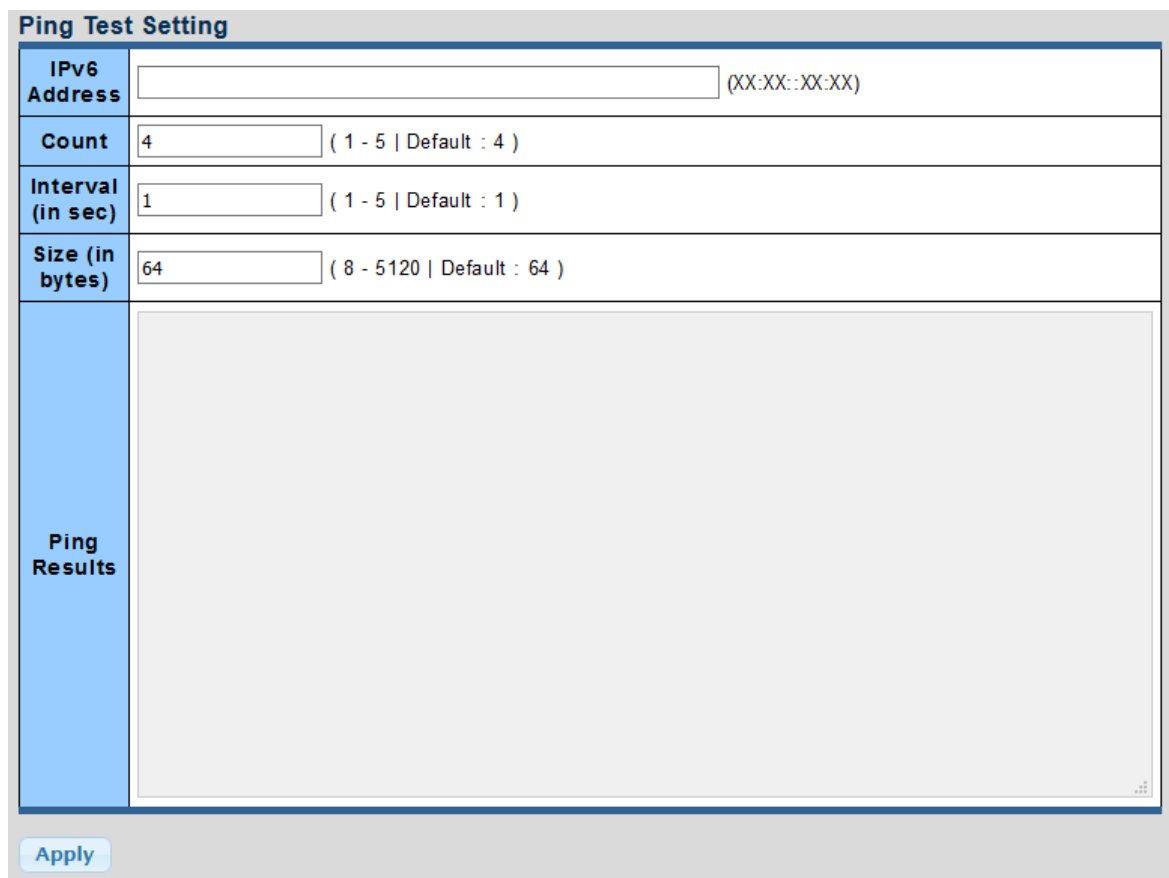

Figure 4-7-9 ICMPv6 Ping Page Screenshot

The page includes the following fields:

| Object | Description |
|---------------------|---|
| • IPv6 Address | The destination IPv6 Address. |
| • Count | Number of echo requests to send. |
| • Interval (in sec) | Send interval for each ICMP packet. |
| • Size (in bytes) | The payload size of the ICMP packet. Values range from 8bytes to 5120bytes. |
| • Ping Results | Display the current ping result. |

Buttons

 : Click to transmit ICMPv6 packets

5. SWITCH OPERATION

5.1 Address Table

The Switch is implemented with an address table. This address table is composed of many entries. Each entry is used to store the address information of some nodes on the network, including MAC address, port no, etc. This information comes from the learning process of Ethernet Switch.

5.2 Learning

When one packet comes in from any port, the Switch will record the source address, port number and the other related information in the address table. This information will be used to decide either forwarding or filtering for future packets.

5.3 Forwarding & Filtering

When one packet comes from some port of the Ethernet Switching, it will also check the destination address besides the source address learning. The Ethernet Switching will look up the address table for the destination address. If not found, this packet will be forwarded to all the other ports except the port, which this packet comes in. And these ports will transmit this packet to the network it connected. If found, and the destination address is located at a different port from this packet comes in, the Ethernet Switching will forward this packet to the port where this destination address is located according to the information from the address table. But, if the destination address is located at the same port with this packet, then this packet will be filtered, thereby increasing the network throughput and availability

5.4 Store-and-Forward

Store-and-Forward is one type of packet-forwarding techniques. A Store-and-Forward Ethernet Switching stores the incoming frame in an internal buffer and does the complete error checking before transmission. Therefore, no error packets occur. It is the best choice when a network needs efficiency and stability.

The Ethernet Switch scans the destination address from the packet-header, searches the routing table provided for the incoming port and forwards the packet, only if required. The fast forwarding makes the switch attractive for connecting servers directly to the network, thereby increasing throughput and availability. However, the switch is most commonly used to segment existence hubs, which nearly always improves the overall performance. An Ethernet Switching can be easily configured in any Ethernet network environment to significantly boost bandwidth using the conventional cabling and adapters.

Due to the learning function of the Ethernet switching, the source address and corresponding port number of each incoming and outgoing packet is stored in a routing table. This information is subsequently used to filter packets whose destination address is on the same segment as the source address. This confines network traffic to its respective domain and reduces the overall load on the network.

The Switch performs "Store and forward"; therefore, no error packets occur. More reliably, it reduces the re-transmission rate. No packet loss will occur.

5.5 Auto-Negotiation

The STP ports on the Switch have a built-in "Auto-negotiation". This technology automatically sets the best possible bandwidth when a connection is established with another network device (usually at Power On or Reset). This is done by detecting the modes and speeds when both devices are connected. Both 10BASE-T and 100BASE-TX devices can connect with the port in either half- or full-duplex mode.

| If attached device is: | 100BASE-TX port will set to: |
|--|---|
| 10Mbps, without auto-negotiation | 10Mbps. |
| 10Mbps, with auto-negotiation | 10/20Mbps (10BASE-T/full-duplex) |
| 100Mbps, without auto-negotiation | 100Mbps |
| 100Mbps, with auto-negotiation | 100/200Mbps (100BASE-TX/full-duplex) |

6. TROUBLESHOOTING

This chapter contains information to help you solve your issue. If the Managed Media Converter is not functioning properly, make sure the Managed Media Converter is set up according to instructions in this manual.

■ The Link LED is not lit

Solution:

Check the cable connection and disable duplex mode of the Managed Media Converter

■ Some stations cannot talk to other stations located on the other port

Solution:

Please check the VLAN settings, trunk settings, and port enabled / disabled status.

■ Performance is not as good as expected

Solution:

Check the duplex status of the Managed Media Converter. If the Managed Media Converter is set to full duplex and its counterpart is set to half duplex, the performance will be poor. Please also check the in/out rate of the port.

■ Why the media converter doesn't connect to the network

Solution:

1. Check the LNK/ACT LED on the Managed Media Converter
2. Make sure the cable is connected properly
3. Make sure the cable is the right type
4. Turn off the power. Wait for a while and turn the power back on.

■ 100BASE-TX port link LED is lit, but the traffic is irregular

Solution:

Check that the attached device is not set to full duplex. Some devices use a physical or software switch to change duplex modes. Auto-negotiation may not recognize this type of full-duplex setting.

■ Media Converter does not power up

Solution:

1. Check if the power adapter plug is inserted correctly.
2. If the power adapter is well connected, check the AC power.
